It Pays To Recommend The "Sovereign"

The dealers who recommend "The Sovereign" hot water boiler all the time make good friends, **BECAUSE** the advantages of "The Sovereign" are apparent to all.

"The Sovereign" hot water boilers certainly emphasise the advantages of hot water heating system.

"The Sovereign" can't help saving your customer's money because it is built on scientific principles which assure economy.

There can be no leak about "The Sovereign" because there are no internal joints in the water section of the boiler.

It does pay to recommend "The Sovereign"

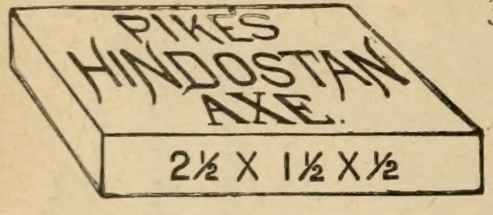
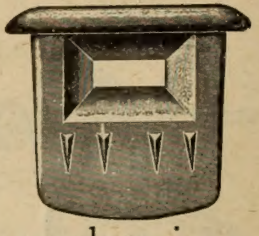
A Promise

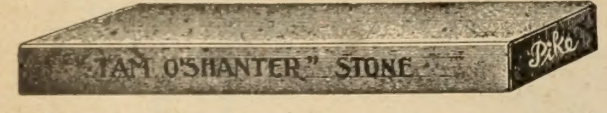


of good service is made by many an axe with its brightly polished edge, gilt head and brilliant label. But the disappointments are altogether too frequent. When selecting axes for your stock why not choose those which have been known for years for their reliability.

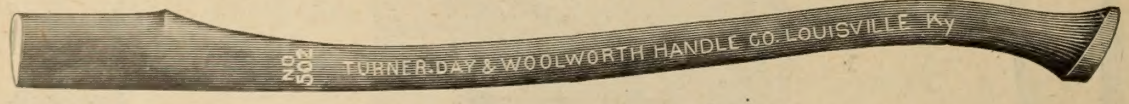


Dunn's "Clipper" Axe is an axe we have sold for 20 years and have always found it reliable and it is still reliable. No better recommendation for an axe is wanted than such a record.

The "Bedford Ebony" is another axe found for many years on our sales records. It is hand-made by expert axe makers and has the natural forge finish.



Stock weights of these axes are 3 to 3½, 3¼ to 3¾, 3½ to 4, 3½ to 4½-lb.



We have Axe Handles
Axe Stones
Axe Wedges

in large variety we ship them promptly. Write us when in a hurry.

A Building Necessity

These are the names that have been made synonymous with the

AEOLIAN VENTILATOR

We are the manufacturers of it and control the patents.

We have placed it on some of the finest buildings in the Dominion.

It is a scientific fact that no modern buildings can afford to neglect sanitation.

We are contractors and sanitary experts. Our ventilator is guaranteed and is placed in position to suit the building as to quality and size.

One Testimony:

MONTREAL, June 12th, 1903.
Canadian Pacific Railway Company.
Messrs. J. W. HARRIS CO., LIMITED,
7 St. Elizabeth St., Montreal, Que.

Gentlemen,—Answering yours of June 1st, I am not personally familiar with the merits of the "AEOLIAN" Ventilators but our Assistant Engineer, Mr. F. Crossley, reports that the Ventilators of this type manufactured by you and used by this Company at the Place Viger Hotel, Chateau Frontenac, Windsor Street Station and elsewhere, have proved satisfactory. Yours truly,

E. H. MCHENRY, Chief Engineer.

Four Reasons why INVICTUS FIBRE is the BEST FIBRE PAPER on the Market

1. Invictus Fibre is made from personally selected pulp wood cut on our own limits.
2. This special pulp wood is again rigidly culled on arrival at our mills.
3. The pulp from which Invictus Fibre is made is manufactured in our own pulp mill and transferred at once to the paper mill, avoiding all drawbacks of transportation.
4. Invictus Fibre will increase in strength and not grow hard and brittle as does fibre made from sulphite pulp. This is a quality of the peculiar and selected pulp from which Invictus Fibre is made.

A trial order will convince you that we are correct. See that each package bears the words "Invictus Fibre." Every ream contains 480 sheets

Peerless Woven Wire Fence

Here is a fence that will sell. Once up no need for repairs. It lasts for years—just what you are looking for. It's horse-high, pig-tight and bull-strong. No stock can get over, under or through it. The most unruly animal can't butt it down and there are no barbs to tear and injure stock. It's

WIND AND WEATHER PROOF

The Peerless lock holds it perfectly rigid and the wires can't slip up, down, nor sidewise. Cold weather won't snap it and hot weather won't make it sag. It's the greatest thing out for farmers, stockmen and all other fence users which makes it a red hot proposition for dealers. It comes in rolls all ready to put up. It's easy to handle. Write for prices.

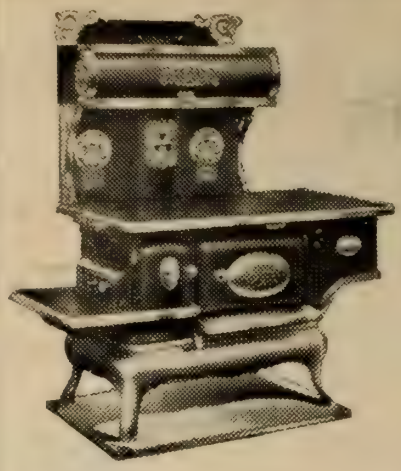
PROOF POSITIVE



The success of the dealers who have handled "**The Joy Malleable Range**" in the older Provinces (where the "**malleable construction**" was unknown) during the year 1906 is **Proof Positive** that the **People** will buy **The Best Goods** if the dealers **will stock them**, and will take the trouble to explain their **superior qualities**.

There is neither satisfaction nor credit in selling Ranges that have little but price to recommend them, and permanent business cannot be built up in any such way. The JOY is doubtless the best value offered to the Canadian people. Will you try them, now?

JOY MFG. CO., 32 Humberside Ave., TORONTO, ONT.

TEES & PERSSE CO., - Western Distributors, Winnipeg
CHAS. H. FOX, - Agent for British Columbia, Vancouver

A Trade Builder.

Were ten dealers to make the same declaration about this range that would make us quite airy. But when hundreds of Dealers call

The
Empire Queen Range

the best trade builder in Canada—well, we are proud of their decision.

Quality goods always impress the shrewd Dealer. He can make strong claims and the article will prove them true.

The Empire Queen is the range that the economic and orderly housewife insists on. And it's the range the Dealer recommends for several reasons. If you don't know them let us mail you a handsome booklet about this range.

From 1865 To 1907

FORTY-ONE YEARS

We have been pounding away making horse nails for the past forty-one years. Long enough to know how to make them don't you think? And have a fair acquaintance with the wants of the horseshoers who use them, and the hardware trade who sell them. And yet we haven't learned all. There is another firm whose representatives "know it all," in fact it is stated 'they are going to put us out of business in a year;" have a case of wine put up with our friend K. to this effect. Well! Well! Tennyson said in the Brook, "Men may come and men may go, but I go on for ever." We are going to try and hold out the year 1907, if not forever, and we think our "**C**" brand horse nails are of such good quality and that we have made friends enough in Canadian Hardware trade during the past forty-one years, to warrant us in thinking we shall. Will you do your share, by ordering the "**C**" brand. Don't accept substitutes; insist on having the brand of horse nails you order and let it always be the "**C**" brand.

WISHING OUR FRIENDS A HAPPY AND PROSPEROUS NEW YEAR.

Canada Horse Nail Company

1906

For what you have done for us during the year just past we thank you. Our sales of Axes have exceeded any former year.

1907

Promises to be the most prosperous year that Canada has ever experienced. We trust you will share in this prosperity. We mean to surpass all former efforts, both in the quantity and the quality we turn out, and we want your order.

The Dundas Axe Works
DUNDAS, ONT.

To be continued.

THE BEST LAID OUT STORE

is the one which displays the most goods.

There are few men who can describe just what they want, but if they see it sampled on a shelf box they can point it out. Which is the easier—for a man to point out the article he wants, or for you to untie half a dozen packages to show him what you have in stock?

Your salesmen should be employed in selling goods, not in looking for goods, in untying packages and tying them up again.

Shelf Boxes improve the appearance of your store 100%.

The Bennett Steel Shelf Box is the best box on the market in Canada or the United States.

It has galvanized steel sides and bottom, and thus saves at least 20% shelf room. The steel is not nailed to the wood front, but is locked in by our own patented process.

The Bennett Box is more durable than a wooden box. of has been tested for fifteen years and we have never heard It one man who was dissatisfied.

Note the "lip" on box, this renders it dust proof. Write for catalogue and price list.

OF MUTUAL INTEREST

A Page of Gossip and Shop Talk

Many complaints have been received from subscribers during the past month about the non-receipt of copies of Hardware and Metal sent them. In every case the fault must rest with the postal department as our mailing has been done promptly each Friday evening and most Ontario subscribers should receive the paper on Saturday. It is annoying to pay for a paper and not get it, but it is also annoying to mail a paper and then be blamed for non-delivery.

* * *

The postal department is undoubtedly overtaxed during the holiday season, but when it takes four days to deliver a letter mailed in Toronto to another Toronto address and Christmas parcels received in Toronto before Dec. 25 are not delivered until New Year's Day, there is something radically wrong with the postal service. The desire to conduct the service on too cheap a scale is undoubtedly one reason for the incapacity of the department. No business (public or private) can be conducted successfully by treating its employes in such a niggardly way as the country postmasters and the city postman are being treated. They should be paid decent wages and expected to give good service in return. One result of the poor remuneration given country postmasters is their recent demand that they be allowed to compile lists of farmers names for sale to the mail order houses.

* * *

Talking about the postal department brings to mind the agitation Hardware and Metal has helped to foster in opposition to the proposed parcels post c.o.d. collections system, by which country postmasters would become collection agents for the mail order houses—and undertakers for some of the smaller local merchants whose taxes help to keep the smaller municipalities going. Hardware and Metal took up the agitation as soon as it was learned that the mail order houses were sharpening their knives in preparation to take their pound of flesh from the retail trade. As a result of our exposure of the plan dozens of Members of Parliament have promised to guard the interests of their constituents and thousands of letters of protest have been sent to the Postmaster General. Meetings of local merchants have been called and dry goods men, hardware men and other retailers have co-operated by sending a joint letter of protest to Ottawa.

* * *

The Ontario Retail Hardware Association has also done good work by notifying every Ontario hardwareman of the danger of the proposed legislation and the following letter is only one of dozens received showing that the trade is at work and "if everybody hustles success seems easy."

Leamington, Dec. 27, 1906.

Dear Sirs,—On the receipt of Hardware and Metal over a week ago the writer personally called on several business men in town requesting them to write to Mr. Clarke, who is the member in Ottawa representing South Essex. We also personally wrote, covering the whole ground as fully as possible. His home is in Windsor, and he is now home for Christmas holidays. He wrote from the latter place stating he would be down here before he went back to Ottawa, some are looking for him every day. If everybody hustles success seems easy.

Yours truly,

Greenshield & Moffat.

Leamington, Ont.

That it is the trade newspapers that the retailers must look to to protect their interests has been amply proven again and again. Associations are a splendid thing. They are necessary and no sensible body of men engaged in similar work will remain unorganized. Men go into business for a profit and they should organize to ensure that they get a profit rather than a deficit But no association of retailers can prosper without the support of the trade newspaper.

The subserviency of the daily press to departmental store interests is also beyond doubt but if additional proof was required it is supplied by their suppression and misstatement of the facts in connection with the killing of a woman in an elevator accident in Eaton's Toronto store, and the serious injury of several girls when a crowded elevator fell in Simpson's store a fortnight later.

* * *

Another incident showing the value of the trade newspaper was furnished last week by president A. W. Humphries, of the Ontario Retail Hardware Association. Mr. Humphries wanted to sell a set of tinsmith's tools. He advertised twice in the Globe, got several answers but did not get an offer for the tools at the price asked. He advertised once in Hardware and Metal. The ad. was received too late for classification and Mr. Humphries failed to find it when looking through the paper. He got several replies, however, and looking again found the ad. One who replied was Clayton Brown, Enterprise, Ont. Being told that the price was $250 and assured that they were as represented he immediately sent a cheque for the amount without seeing the tools. When he did receive them he was so delighted that he wrote his thanks to Mr. Humphries, and said he would not resell the set for less than $350.

It doesn't need a sledge-hammer to drive home the moral: Hardware and Metal want ads. bring results.

* * *

The editor has some goods things in store for readers of Hardware and Metal. There are some bright and brainy Canadian retailers who know how to use the pen and several of them have promised to give readers of the paper the benefit of their experience. Every retailer will be interested in the article on "Retail Business Methods," by A. E. Provost, Ottawa, in this issue and even more interest will be taken in other articles which are to follow. At present we can announce the early publication of an able article on "The Percentage of Profit," by Fred C. Lariviere, Montreal, two on "Why I Started the Cash System," and "The Cash System in Operation," by A. E. Cote, Morris, Man., and another interesting contribution by M. F. Irwin, the new manager of McClary's branch at St. John, N.B..

Our Ontario man got in conversation with a traveler for a Western Ontario woodenware house the other day in the town of Bolton. After the usual salutation, "What's your line" they started in to discuss trade papers. Our woodenware friend at once remarked that he wished their firm would advertise in Hardware and Metal, as it would make it so much easier for him to sell goods, and would be a great help in opening new accounts. He stated that he would try and induce his manager to take space in Hardware and Metal this year, as he had great faith in the results, and said his house would thank him for the suggestion at the end of next year.

"I am well pleased with the improvements constantly being made in Hardware and Metal," is the way L. Wale, of Stevensville, Ont., expresses himself in a letter in which he renewed his subscription.

I consider Hardware and Metal the finest trade paper in the Dominion, recently wrote E. P. Paulin, Goderich, one of the active executive members of the Ontario Retail Hardware Association.

"I appreciate the usefulness of Hardware and Metal and as surely as it is an absolute necessity amongst hardwaremen so is good window dressing an absolute necessity for prosperity, and in my opinion the cheapest method of advertising," wrote W. G. Pow, recently. Mr. Pow was on the road for the Hobbs Manufacturing Co. last summer, but is now managing W. R. Hobbs' retail store at Tillsonburg.

THE TURN OF THE YEAR

A Glance at the Past and a View Into the Future — Comments on Trade Conditions by Jobbers and Manufacturers.

"The ——— company is doing the largest business in its history."

The above can be said of almost every business concern in Canada. Fill in the name of any manufacturing company or any jobbing or retail house and a story is told that in all but a very few instances is true, so great is the general prosperity in all parts of the country.

The remarkable volume of trade done in 1906 made it difficult to promise better results in 1906, but with the exception of a few places building and general business has totaled to a greater volume in 1906 than in the twelve months previous.

Looking Forward.

The same conditions would make it hard to forecast the possibilities of 1907 were it not for the heavy booking of orders which manufacturers report, the capacity of many plants having already been contracted for as far ahead as nine months. Prices of nearly every line are very stiff and the tendency is still upward, advance following advance so fast that few are able or desirous of stocking up with goods heavily.

Merchants can well afford to mark up all stocks in hand to present ruling prices as seems unlikely that there will be any decline during 1907, while it is improbable that stocks can be replenished at former prices. Far from affecting the demand for goods adversely, the high prices seem to stimulate trade and encourage even greater buying, all classes appearing to be prosperous and willing to spend money freely. Unless something unforseen happens, the coming year's business will eclipse the splendid records made during the past two years.

Big Year for Building.

Alex. McArthur & Co., the well known paper manufacturers, stated that the past year had been an active one in all the various lines of building paper, owing to the new buildings and extensions which have gone up all over Canada, in keeping with the prosperity which seems to pervade every section. A better appreciation by the public is also noticeable in regard to the insulating advantages of paper and felt on all kinds of buildings, the extremes of heat and cold within them being reduced to a minimum at a trifling cost. The cost of material has advanced and prices of the product are likely to remain firm.

New Factories Ensure Competition.

Adam Taylor, Secretary of the Taylor-Forbes Co., Guelph, states that his firm looked for big business in 1906, and their expectations have been fully realized. The demand for hardware lines and heating goods has been extraordinarily large, and prices have been very low in comparison with the cost of materials and labor. During 1907 higher prices are certain to be the rule, as it is evident that iron will continue high during 1907 and lower prices cannot be expected until well on into 1908. Hot water boilers are likely to advance at once, while quotations on hardware lines are withdrawn, and all orders subject to the prices ruling on the day the order was taken. Mr. Taylor was very enthusiastic about the outlook for trade in Canada in future, but pointed out there is certain to be plenty of competition. The numerous new plants and extensions to old ones, will provide for a very large increase in the output of Canadian factories and foundries.

Paints "Brightening Up."

In discussing the paint and oil situation, William H. Evans of the Canada Paint Company, remarked to "Hardware and Metal" as follows:

"The year 1906 has been characterized by a tremendous enquiry for painting material of every description. This industry has made rapid strides in Canada, and capital has not been "backward in coming forward" to aid and build up the rapidly increasing industries of varnish and paint making. Linseed oil and turpentine have kept somewhat along steady lines, but white lead has met with a sharp advance which has been well maintained and zinc has also felt the world's call for an increased supply of metals in the arts and industries.

Profits to some extent have been curtailed, owing to the prices received from the trade not keeping pace with the enhanced values which prevail for a large number of the chemicals and crude articles which enter into the composition of paint colors and varnishes. Labor is much higher, and all through the lists costs show a marked appreciation which will have to be reckoned with in marking prices for 1907.

Even at the advances which are inevitable, a very large business for 1907 is assured, and the large factories seem to be running on full time right through the holiday season to keep pace with the healthfulness and enthusiasm which is everywhere apparent in Canada."

Heating Goods Active.

W. J. Cluff, of Cluff Bros., Toronto, selling agents for Warden King & Sons, Montreal, is enthusiastic over the amount of business his firm has done during the past year. The demand for all classes of heating supplies has been phenomenal, and their chief difficulty has been in securing prompt deliveries of supplies which are not manufactured by themselves. Mr. Cluff says that conditions will be better in the future, as arrangements are under way to manufacture radiators and other supplies, so that their customers can have the advantage of securing goods of one manufacturer. During the past year, Cluff Bros. have erected a magnificent warehouse in Toronto, and they are now building up their stock in order to keep pace with the increased demand they look for during 1907.

A Year of Prosperity.

"We believe that no such year of prosperity as the one which is past has ever been known in the hardware and metal trades," said W. J. Fuller, president of the Canadian Fairbanks Company, Montreal. "Prices have been constantly advancing, and if the merchants had taken proper advantage of increased values of their stocks they should show very handsome profits at the end of the year.

"During the year the Canadian Fairbanks Co. has put into operation its large plant at Toronto for the manufacture of gas and gasoline engines, steam pumps and other of its specialties, and is endeavoring to become as rapidly as possible, handlers of Canadian-made goods only. They have in view the coming year the establishment of their scale and valve factory, for which a site has already been secured in the Eastern Townships and which will be in operation before June 1st. Every one of the factories which the company represents is filled with orders for months to come, and there is every prospect that the year 1907 will see a much larger volume of business than the year 1906.

"We are carefully on the outlook for any indications which will point to a climb in prices in raw materials so that we may take proper notice and not be caught with stocks of high-priced goods. This is something which every one must realize the importance of."

Prospects for 1907.

"The year just closed has been the best since the branch opened here. As far as I can see the prospects are equally good for 1907 so it will be up to me to keep up the record," writes M. F. Irwin, the new manager of the St. John, N.B., branch of the McClary Manufacturing Company. The McClary business at St. John is steadily growing and the enlargements and changes now being made should mean a considerable increase in their Maritime trade. Being a practical tinsmith, Mr. Irwin should make a success of the new factory being established to supply the eastern trade.

Poor Deliveries Chief Fault.

James G.. Lewis, vice-president of Lewis Bros., Montreal, said the year that has just closed has been the most prosperous in the history of his company, they having found the trade anxious to buy goods and the fault has been the poor deliveries made by the many factories. There is no doubt that the present century will belong to Canada to a larger extent than to any other country and the amount of the purchases made by the trade and the hardware merchants in particular will

astonish those who have been in business for the last twenty years. For the present year they recommend all retail merchants to place their orders at once, for, while deliveries may be bad now, they will be worse a few months hence. Those who have goods to sell should ask the market price as they will have no trouble in disposing of their stocks.

Big Year in West.

W. S. Brock, western representative of the Ontario Lead & Wire Company and the Standard Ideal Sanitary Company, who has been in Toronto during the holiday season, states that last year was the best in the history of the plumbing trade in Western Canada. There has been a tremendous demand for all classes of supplies and it has been difficult to keep up with the demand, but Canadian manufacturers have succeeded in doing so with a very small share of the trade going to United States houses. Mr. Brock looks for an equally good trade during 1907; the building industry in the West showing no signs of falling off.

Guessing as to the Future.

The Thos. Davidson Manufacturing Company had a fine year and stated that for the year 1906 the stamped and enamelled ware trade along with other trades using steel as the basis of their supplies have paid advancing prices for their raw materials and had difficulty in obtaining deliveries. The volume of trade was large, but the prices of the products were not in keeping with the advanced cost. There, however, were practically no bad debts, which will compensate to some extent for the low prices. The trend of the business seems to be manufacturing in larger quantities and establishing distributing depots to accomplish quick deliveries in all parts of the country. Besides the advance in the price of steel two of our other raw materials have advanced to prices making a record, viz., pig tin to 43c. per pound and sheet copper to 29c. per pound, so that we are kept guessing as to the future.

Higher Prices Predicted.

"Regarding the outlook for the mixed paint and white lead trade during the coming season," writes John A Straith, president of the Standard Paint and Varnish Works Company, Windsor, Ont. "in our opinion it is exceedingly bright. If we were to judge the future by past experiences it is bound to be good. Our past year's business showed the usual increase on previous years business, and we have no reason for complaint. In our opinion all paint manufacturers along with ourselves will be obliged to further advance prices on mixed paints as well as white leads in the early spring. The present high prices of every commodity entering into the manufacture of a good product, will we think, necessitate this move."

Enlarging Rolling Mills.

The Montreal Rolling Mills Company said in their opinion the year just closed had been one of the busiest and most prosperous in the experience of all classes of industry in this country. As far as they were concerned they had not been able to fill all the orders that had been sent in to them. The great development all over the country, particularly in the Northwest, has created an unprecedented demand for material manufactured by them such as rail fastenings, consisting of spikes, bolts, fish and tie plates, also wire nails, wrought pipe, etc.

Their aim was always to keep abreast of the times in the way of facilities for turning out goods that were most in demand, and in such quantities as were called for; and with this end in view had now in the course of construction additions and alterations to their plant, which they hoped would place them in a position to take care of the wants of their many customers.

Big Demand for Paints.

Mr. Benson, manager of the Sherwin-Williams Toronto branch, reports a very brisk year for 1906. Some of their travelers while at the Cleveland conference estimated that 1907 sales would show an even greater increase. Everywhere building is active and that means a big demand for paints.

Cordage Industry Depressed.

A well known authority on binder twine gave the following more or less gloomy opinions :—

The binder twine, cordage and twine requirements for the past twelve months have naturally increased with the growth of the Dominion; and it is regrettable this expansion, for following reasons, is not benefiting those factories established in Canada :—75 per cent. of the binder twine for Canada's harvest is imported, being on the free list to the world; the greater portion from the United States, into which country Manila binder twine, exported from Canada, must pay 45 per cent. The British preferential tariff permits the importation of much low grade cordage, bearing the name of, but containing little, Manila hemp. The equal of this is not acceptable to buyers from home manufacturers. At two Canadian cities convict labor is employed making binder twine and cordage. Canada is gradually becoming a veritable dumping ground for low grade cordage.

These conditions during the past three years have caused the failure or forced liquidation of seven factories. The dozen existing manufacturing plants, contending as best they can with such serious obstacles, have now by the last Government Budget to face another, the free listing of cordage used by fishermen. Canadian grain, fish and farmers are second to none in the world, and surely do not require protection at the expense of one of the country's leading industries, especially when there is so much competition within the country to regulate prices. With some re-adjustment by the powers that be, the 1907 outlook, so bright for the various industries in our flourishing Dominion, could be considerably improved for the large interests in the cordage manufacture.

A Banner Year.

Rice Lewis & Son, wholesale hardware merchants of Toronto, report a banner year for 1906. As they were at all times taxed to their utmost to fill orders, the manufacturers being largely to blame for delays in shipments as goods could not be turned out quick enough. Stocks are being rapidly repleted, however, and in many cases extensions added to factories to meet with the demand. The prospects for 1907 are even brighter than a year ago, orders coming in steadily.

Excellent Year's Trade.

H. S. Howland, Sons & Co., wholesale hardware merchants of Toronto, have had an excellent year in all branches of their business, orders being received steadily and business being very even throughout the year. The outlook for 1907 is for an even greater volume than in 1906, prices being firm and stocks low owing to the big demand and the scarcity in many lines. The nail situation has for quite a time been very trying to both jobber and retailer. In a great number of cases orders could not be filled, and had to be transferred for spring shipment. Manufacturers are rapidly repleting their stock in view of the large demand looked for during 1907.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any of the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

1518. Nuts and bolts—A Lancashire manufacturing firm desires to obtain prices of nuts and bolts from Canadian exporters.

1519. Handles—A Lancashire firm asks for prices of spade and pick handles from Canadian manufacturers of same.

1520. Hardwood stems—A Lancashire firm asks for prices of hardwood stems, 2 feet 8 inches long by 1 1-2 inches diameter at one end, reducing to 1 7-16 inches at other, from Canadian exporters.

1544. A London firm, in the paint, color and varnish trade, contemplates appointing agents in different parts of Canada, and is desirous of hearing from persons who are in a position to entertain such business.

1552. Fireworks—A London firm, manufacturing fireworks of all descriptions, wishes to get into touch with a first-class Canadian firm prepared to introduce and carry stocks of their goods.

1553. Gas stoves—A Birmingham firm, manufacturers of gas stoves, would like to get into touch with Canadian importers of this line of goods.

1554. Motor cars, motor cycles, forges, etc.—A Birmingham firm manufacturers of motor cars, motor cycles, cycles, forges, bellows and anvils, would like to be put in touch with Canadian dealers in these lines of goods.

1555. Electrical lighting apparatus—A Birmingham firm desire to get in touch with Canadian imports of rough electrical lighting apparatus for mines, factories, etc.

1556. Corrugated iron—A Birmingham firm would like to get in touch with several firms in Canada with a view to doing business in corrugated iron.

RETAIL BUSINESS METHODS

An Address by A. E. Provost, Wholesale Grocer, Before the Ottawa Retail Grocers' Association.

"We are not here this evening," said Mr. Provost, "as a mutual admiration society, but as a company of business men met for the very practical purpose of discussing the best methods of carrying on our work. In the few words that I will address to you I wish to speak somewhat as I would to a young man who is about to take charge of a business for me, giving him such points and suggestions as I think might be of advantage to him.

The first consideration for a man embarking in a business is the selection of a stand; but as all of those present are probably located in premises where they expect to remain, I need not do more than mention that point.

Relations With Customers.

Once started in business, the next point you have to consider is what should be your relations with your customers. I would strongly recommend you to make the personal acquaintance of each one of your customers. Take occasion once in a while, if it be only once a week, but whenever you have the chance, of paying some personal attention to each one, waiting upon them, having a little chat with them, or passing the time of day. In this way you will make them feel not only that you are glad to see them in your store, but that they will be glad to come. Your personal acquaintance with your customers and establishing good relations with them in this way, will have the effect of attaching them to you so that you will not be, as some merchants are, largely at the mercy of their employes. For, remember that even your most popular salesman of to-day may be to-morrow in the employ of your business rival, and, but for your personal hold upon your customers, might induce some of them to transfer their trade to his new employer. It is of course well to have salesmen of pleasant and obliging manners, but these are not all the qualities that they ought to possess. It is far more important that they should have that supreme qualification, the ability to sell goods, because that is what they are there for, and not merely to be entertainers of your customers.

Not Too Familiar.

But here I must warn you against being over familiar with your customers, which is almost as great a fault as to be wanting in courtesy. My experience has been that very often a customer with whom you become on too friendly or intimate terms is apt some day to presume on this to ask you for favors which you cannot, in justice to yourself or your business, grant. The true relation between a merchant and his customers, as it appears to me, is something like that which exists in departmental stores between the heads of departments and floor walkers and the public. Thus far, but only thus far, do the proprietors of these great establishments appreciate the importance of personal relations with their customers. That is why we find them engaging for these positions the very merchant whom they have crowded out of business for themselves in the stress of competition.

Good Goods Always.

The next question for consideration is the purchasing of stock. It is very easy to say that the true rule is always to buy the best and buy it right, but as you all know it is pretty hard to carry

A. E. Provost, Ottawa.

that rule out in practice. At the same time, I cannot lay too much stress on the importance of handling the very best goods that are suitable to your particular trade. I must confess that I have a special prejudice against low-grade goods. If a customer tells you that some goods you sold him were not up to the mark, what satisfactory argument or defense have you in reply? No one can defend inferiority. Quality is remembered long after price is forgotten that is an old and true adage in business of every kind. There is not a man in this audience who complains of the price of his wife's hat if he thinks she looks pretty in it, and in business price is always secondary to quality.

Not Too Much at Once.

Beware of the quantity men who try to induce you to purchase large quantities of one line of goods, using the deceptive argument that five cases are so much cheaper than one. In my comparatively brief experience in the wholesale trade I have been one of the victims of several failures and I have invariably found that these large-quantity goods comprise most of the stock of the men who failed while they had not the means to stock properly with goods more commonly in demand. One of the favorite arguments of these quantity men is the long terms offered—sixty days from the first of next month, and so on; but many a man has found that even after the sixty days had expired and he had to pay for the goods, a large proportion of them were still on his hands.

Speak to All Who Enter.

In the selling of your goods, a word of salutation or greeting to your customers when they come to your store is such an elementary requirement that it is perhaps superfluous to suggest it. But in the press and hurry of business, men are very apt to overlook such little acts of courtesy, and let customers wait for some minutes without noticing them. Even when serving one customer, it is very easy en passent to say a word of greeting to another who has just come in, with the assurance that you will wait on them in a few minutes.

Above all things, tell the truth about the goods you are selling as far as you know it, and avoid exaggeration. By over-praising the qualities of the goods you are selling to-day, you may be unconsciously depreciating the qualities of others which you may have to sell to-morrow. Do not be too anxious to convince your customer of the high qualities of one kind of goods or the inferior qualities of another kind; you can safely leave your customer to find out some of the qualities of the goods he is buying for himself, and some of your customers may use some of the undigested ideas you may have given them to your own disadvantage at some future time.

Credit to New Customers.

Most of you sell largely on the credit system. I would suggest that when a new family comes into your neighborhood and begins to do business with you, it would be well to post yourself upon their financial standing with the dealers in the neighborhood from which they have come. Sometimes they will at first send a child for a small purchase, and you can often learn from a child at such time what you want to know about the family, the father's

occupation, etc., so that when the parents come, as they certainly will shortly after, and ask you for credit, you will be in a position to say definitely whether you can give them credit of not. And when you open an account with a new customer, make a definite arrangement as to terms of payment, and see that he lives up to it as far as possible. If on pay day he cannot settle the account, give him to understand that you expect him at least to report and explain the reason why.

With regard to the delivery of goods, it is now a common practice on the part of the larger stores to have from two to four deliveries daily at fixed hours. Experience has proven this to be the very best method. Your customers know the hours of delivery and act accordingly, and you are saved a great deal of expense and trouble.

Watch the Big Advertisers.

As most of you are not large advertisers, I would suggest that you take advantage of the advertisements of the larger stores. Read them regularly, and whenever you find goods advertised that are likely to appeal to your patrons, bring these goods to the front and ticket them at the prices advertised by the large stores. You will be surprised at the effect. For instance, a lady, just after reading in one of these advertisements of 3 pounds of raisins for 25 cents in a big departmental store, walks into your shop; and if she sees a ticket on a box of raisins offering that at the same price, she is at once inspired with confidence in your ability to sell not only raisins, but every other kind of goods as cheaply as the large stores.

Read the Trade Papers.

In this connection, I would recommend you to read the trade papers, which will give you a knowledge of the trade which will enable you to command the market and buy goods at the right time and of course at the right prices.

Just a word about your dealings with your creditors. Do not return a draft because there is some trifling mistake in it, perhaps a consignment has been short by one package. It will be good policy on your part to trust for a few dollars the men who trust you for hundreds, and you will find that you will never have any difficulty about having little errors of this kind rectified. Be careful never to write a cheque which there are no funds to meet. This is simply ruinous to a merchant's credit. These cheques go through the clearing house, and within twenty-four hours after they are written every bank in Ottawa knows that a cheque of yours has not been honored. Some day you may be surprised to find that you are refused a little accommodation by some bank by reason of this neglect on your part.

CANADIAN HARDWARE STORES

No. 10.

BUSY CALGARY STORE.

We are glad to be able to show in this number another of the many fine hardware stores in the Canadian Middle West, that of Linton & Hall, Calgary.

A. T. Linton and E. C. Hall, two Campbellford boys joined forces early in the Fall of 1905 and opened up their hardware store in the "Armstrong Block." Both of these young men being practical in every way and having the advantage of careful training, backed up with the other good qualities necessary to spell the word "Success" viz Perseverance, Energy and Push, their venture from the very first day has been a most successful one.

CANADIAN HARDWARE STORES NO. 10—Linton & Hall's Store at Calgary, Alberta.

Mr. Linton has served with several of the foremost hardware houses in Ontario, beginning as he did with the old pioneer firm of C. S. Gillespie, of Campbellford, Ont. After seven years faithful work there he went with J. W. Walker, of Belleville. Afterwards with John Lewis of the same city and R. R. Casement of Madoc, and finally took a position with the Marks-Clavet-Dobie Co., of Port Arthur, remaining there for several years. Hearing so much of Alberta and trusting much to the great future of the Middle West as a young man's country he came forward at the solicitation of Mr. Hall to join him and begin their career as hardware merchants in the growing city of Calgary in sunny Alberta.

Mr. Hall is not a newcomer by any means, in fact he may be considered something of a pioneer of Calgary. He became identified with the interests of the city eight years ago, and joined the staff of A. McBride & Co., one of the oldest houses in the hardware line in Alberta, remaining with them until the present firm of Linton & Hall came into existence. Mr. Hall is one of the most energetic officers of the Calgary Fire Department, rising from the ranks to the position of Captain of the Aerial Truck Company, besides being a member of several other societies in the town.

Linton & Hall carry a stock of shelf and heavy hardware, paint, oils, glass, etc., and are City Agents for the Gurney Standard Metal Co., of Calgary, being a branch of the Gurney Foundry Co., of Toronto, who make the celebrated "Oxford Chancellor" stoves and ranges. Finding their quarters in the Armstrong Block limited and the necessity of more room crowding them out they sought and found quarters in the "Victoria Block" on the Main Street, a most pretentious building of Alberta sandstone in the very centre of the city. Business expanded with the new move and even now there is no room to spare. Success in any business does not come easily it means hard persistent work And both these young men are workers, and they have earned what they possess —A good business and a good name in the commercial world.

It's the man who never does anything who is always Jonny-on-the-spot when it comes to telling how things should be done.

The Board of Trade of Minnedosa, Man., is at present concentrating its efforts on the organization of the Minnedosa Power Company, for the purpose of developing available water power in the vicinity. The Minnedosa Power Company was formed some few years ago, but owing to insufficiency of capital the charter obtained was never utilized until now, when it is the intention to float the company as speedily as possible. With this object in view the Board of Trade has issued a prospectus inviting applications for stock.

STOVES AND TINWARE

OVERCOMING STOVE PROBLEMS.

No stove or range ever made has of itself what is called a draft; that must be furnished by the chimney or flue, and even when the draft in chimney or flue is perfect, that is not all that is wanted to insure good work or good bread or biscuits; the other things necessary being proper setting up, good fuel, good material—and last, but not least, a good cook. I had a customer years ago, writes F. P. Hans, a Missouri hardware salesman, who would never guarantee a stove to bake well, and when the lady would ask "Why won't you guarantee the stove to bake well, after saying that you know the stove is a good baker?" his answer would be: "I know the stove is a good baker, but I do not know if you know how to bake or not." And there is a lot that hinges on knowing how, in baking as in everything else.

An old-timer told me that when a lady bought a cheap cook stove the chances were that she was going to use it herself, and if the top part of the oven got too hot, would place a paper over the bread or biscuit until enough ashes had gathered on the top oven plate or if the bottom of the oven got too hot, she would put a stove cover under the pan. On the other hand, when a lady bought a high-priced stove the chances were she would have a servant to run it, and if breakfast was late because she had been late in getting up to start the fire, her excuse would be that the stove would not draw. If, on the other hand, she got the oven too hot, or forgot to take out the bread or biscuit in time and they were burnt, the excuse would be the stove could not be regulated and at times I have found these excuses used under conditions mentioned.

Unreasonable Guarantees.

So, in making a sale, do not make any unreasonable guarantees or promises; do not say this stove or range, as the case may be, will do good work set up to any kind of an old chimney and with any kind of fuel; because you know it will not, no matter what may be its name or who may be its maker. To obtain the best results there is needed a good flue or chimney, proper setting up with pipe full size of collar on the stove or range and good fuel, and as stated before, a good cook to run it.

When possible the dealer should set up every stove or range he sells and the man doing this work should not be the cub or the poorest workman about the place or shop. He should know enough about the business to know if the flue he is going to use has a good draft or not, should so tell the party buying the stove or range and if possible correct the trouble before leaving the job. If this were always done there would be fewer kicks afterwards.

When the stove or range goes into the country where a man cannot well be sent to set it up, instruct them as far as possible how to set it up and what faults to avoid. Many of the manufacturers have booklets or circulars on this subject that they would be glad to furnish if they knew they would be used.

A good chimney should be 8 x 8 inches inside, and the top of it should be a little higher than the highest part of the comb of the house, and should not have a tree overhanging the chimney, as is sometimes the case, and flue should end from 4 to 6 inches below the opening into which the stove pipe runs, and should not run down to the floor or into the cellar where, perhaps there is an opening into said flue without a cover or stopper of any kind; and remember putting up two or three stoves to one flue is like hitching up two or three wagons to a single team just large enough to handle one wagon easily.

Always Will Be Complaints.

I suppose as long as stoves and ranges are sold there will at times be complaints made and when they come in they should be looked after at once, and it is well to go yourself or send a man who knows the business. The first thing I do in such cases is to fire up the stove or range to see for myself how it burns.

If you find the fire does not burn well, examine the flue and see that it has a good draft. If not, locate the trouble and remedy it if possible, because a good draft is absolutely necessary to good work. Next, look to the fuel and remember you cannot get a hot fire from wet or rotten wood, as the heat used in evaporating the water in green or wet wood is lost to the oven; nor can you get a hot fire from poor coal, especially when mixed with dirt. Then see that the ashes are kept away from the bottom of the fire and from under the grate allowing the air to pass freely through the fuel, as air is as necessary to a fire as is the wood or coal, and a fire can no more burn without any air than you can live without air. All air entering into the fire box should pass under and through the fuel, as any air that passes over the fire checks it and at the same time cools the oven, so I would say always keep the damper slide in the front door closed, and it would be better (in my opinion) if no damper slide was put in the front fire box.

Fire Box Needs Air.

Get all the air necessary into the fire box by drawing out the hearth slide, as in doing so the air is put to the bottom of the fire where it belongs. But while air is necessary to combustion, like in everything else, there may be too much of a good thing. Only one-fourth of the air entering the fire box is oxygen, the only thing that counts, while the other three-fourths is made up of neutral gases that contribute nothing towards combustion, but have to be heated at the expense of the oven; so that while it is necessary to admit all the air into the fire box that is needed to make the fire burn well, no more than is necessary should be admitted to keep the fire burning well. And as no two flues draw exactly alike, nor the same flue draws alike every day, but change as does the weather, the amount of air to be admitted to do the best work can only be learned by experience, as any good cook will tell you, and that is why an oven will get hotter one day than another, using the same kind and same amount of fuel.

HELPS FOR FURNACE MEN.

For years I have set furnaces and in consequence have many customers who need a little instruction every fall to get their heaters operating satisfactorily, writes an American furnace man. They change servants and those who are familiar with the proper management are no longer available. The general and specific charge is that the heater doesn't heat. Frequently we find that the cold air box has the damper shoved in to the fullest extent, making it impossible for the heater to supply the different pipes connected with it. Not infrequently some change in the immediate neighborhood of the cold air inlet affects the air supply, sometimes producing an eddying current, creating a vacuum where there should be a pressure. Often when dampers are put in the hot air pipe at the furnace they may be closed off and it needs a man from my shop to go to the house and open the damper. Frequently in extremely cold weather we are told that even with a good fire the heater fails to do its duty. An investigation finds that the ashpit is banked with ashes and the firepot is more than half full of ashes with a fair fire on the surface, leaving the impression with the house owner, who may go down into the cellar and look in the feed door, that there is a good fire. Here, however, investigation stops. When a $3.50 a day tinsmith or furnaceman spends about an hour removing ashes from the ashpit, clearing the ashes out of the fire and getting a good fire started it is both expensive and vexing, yet I have to make out such bills frequently. Frequently people have automatic draft regulators attached to the smoke pipe and through a misunderstanding of their use and operation they hinder rather than help conditions. After they are once set going properly and some member of the household thoroughly understands there is no further complaint, and these automatic devices give quite general satisfaction. In fact, in many instances their sale has been both a source of profit to me and of comfort to the owners in keeping up a more regular fire. Too much draft or too much air supply are never the cause of any trouble to me. I can regulate them. But a lack of either will make trouble for any furnaceman. Then every little cause of friction must be removed to help the flow of smoke or air.

The genuine joys of life are to be gotten from useful effort, and to hunt for pleasure is to lose it. Do your work and pleasure will come to you.

RETAIL HARDWARE ASSOCIATION NEWS

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

ONTARIO EXECUTIVE MEETS.

The Executive Committee of the Ontario Retail Hardware Association held an important meeting in Toronto on Monday, Dec. 31st, when arrangements were made for the coming March Convention, and action taken on various matters before the Association.

Correspondence was read from Jenkins & Hardy, representing the Canadian Wholesale Hardware Association, and the Sheet Metalware Association in reference to the cartage charges question, the resolution passed at the September Convention recommending that where jobbers sell to persons outside the trade that they protect the retailers, and in reference to the resolution that enamelware manufacturers mark all seconds as such in plain letters. Letters were read from Secretary McRobie of the Western Canada Retail Hardware Association in reference to enamelware price-cutting by departmental stores, and other matters. An interesting communication was also read from Secretary Trowern of the Retail Merchants' Association in reply to a letter advising him of the action being taken by the Retail Hardware Association in the matter of opposing the Parcels Post C.O.D. Collection System. Secretary Trowern agreed that all merchants should cooperate in combating the proposed legislation, and stated that his Association was also opposing other legislation, which they would be glad to have the co-operation of the Hardware Association in combating.

Good Friday Chosen.

It was decided that the date of the annual convention in March would be changed from Tuesday, March 12th, to Thursday and Friday, March 28th and 29th, the latter date being Good Friday when single fares would be available on all railroads. The opening meeting will be on Thursday afternoon, and on Thursday a banquet will be tendered the members of the Association by Col. MacLean, publisher of Hardware and Metal. A very interesting programme will be arranged for Friday morning, afternoon and evening; a "question box" being established in which questions of interest to the trade may be asked by any dealer and replied to and discussed by any others present.

The Executive decided to send a letter to the Railway Commission drawing attention to the unjust conditions existing in connection with the cartage charges imposed on retail hardware merchants, by an arrangement between the jobbing houses, the railway and the cartage companies. The Executive will ask the Railway Commission to eliminate the existing evil, having failed to secure satisfactory action after protesting against the charges to the Wholesale Hardware Association.

The Parcels Post question was discussed at considerable length, and it was decided that a draft letter would be prepared to be published in Hardware and Metal, and that every hardware merchant in Canada be requested to copy the letter on his letterhead, and forward copies to the Post Master General and his local member of Parliament, mailing the letters so they will reach Ottawa on Feb.1st next. It was also resolved that the Association views with disfavor the proposed legislation, and that the Executive co operate with other organizations in securing its defeat. Frank Taylor, of Carleton Place, was appointed to represent the Association if it is found necessary to send a delegation to Ottawa to oppose the measure.

The Secretary reported that new members were already being enrolled for 1907, and many of the old members had forwarded their membership fees for the coming year. It was decided that an active campaign would be conducted in order to increase the membership roll to 300 members if possible, before the March Convention.

Provincial Legislation.

The resolution adopted last May that the "Association petition the Ontario Legislature to so amend the statute law and abolish the exemptions in Section 180 of the Division Court Act, so far as to make small accounts up to $5.00 collectable by garnishment by a procedure in the magistrate's court similar to that for collection of claims for wages, the prosecutor to serve the summons in the case without charge," was discussed and it was decided that the matter would be brought to the attention of the Attorney-General, and each dealer in Ontario requested to urge his local member of the Legislature, to support the proposed amendment.

Complaints were received of jobbers selling direct to persons outside the trade at wholesale prices, and the Secretary was instructed to take the matter up with the representatives of the Wholesale Hardware Association. Two cases discussed were those of jobbers selling cutlery to a School Board at the same price quoted a retail dealer and of jobbers selling skates to young mail order advertisers who have no regular place of business, but who advertise in the daily papers in Stratford, Chatham and other centres, offering to supply skates, etc., at prices which the local trade would be unable to meet. It was felt that jobbers should protect the retail dealers who are their customers in these places, from the competition of those who are under no expense in keeping up places of business.

Better Freight Classification.

The question of freight classification and it was decided that a representative was explained at considerable length of the Executive would meet the railroad freight officials and endeavor to secure a better classification of hardware articles. This matter will be reported on at the March Convention.

As the Western Canada Retail Hardware Association will hold its annual meeting in February, the Executive decided to recommend to that body that a temporary Dominion Retail Hardware Association be formed to be composed of the Presidents and Secretarys of the two existing Associations, until a permanent organization is effected.

Mutual Fire Insurance.

J. Walton Peart, of St. Mary's, Chairman of the Mutual Insurance Committee reported that satisfactory replies had been received from a fair percentage of the members, and he estimated that at least, one million dollars worth of insurance would be placed with the Mutual Fire Insurance Company if one was organized by the Association. Steps are being taken to procure legal advice as to expense of organizing a company, and several old line companies are also being asked to quote a rate at which they will accept fire insurance to the amount of at least one million dollars, if placed with them by the Ontario Hardware Merchants, through the Association.

The Question Box.

At luncheon, when the members of the Executive were entertained by Secretary Wrigley, some very valuable points were brought out in the "round table" discussion, several members saying the pointers received were worth the expense of a trip to Toronto. All agreed that there was no more valuable feature of trade associations than the opportunity convention gatherings gave to members to exchange ideas with men in their own line of trade who are not nearby competitors. Consequently the "Question Box" feature will be made important at the March Convention.

At luncheon on Monday the following questions were suggested:

"Does it pay a dealer doing a $50,000 business to go behind the counter?"

"Is Christmas trade in specialties worth going after?"

"Is it wise to transfer a customer from one clerk to another?"

"Is a parcel boy at 50 cents per day cheaper than one at $1 per day?"

"Does it pay to advertise—and how?"

"Should a portion of a clerk's salary be withheld in order to ensure steady service?"

"Can the shortage of tinsmiths be relieved better by employing helpers?"

The "Question Box" makes a good target for keen thinkers. Who can hit the bull's eye first?

Art follows in the wake of commerce, for without commerce there is neither suplus wealth nor leisure.

FIGHTING MAIL ORDER HOUSES.

In Canada the first skirmish in the fight between the mail order houses and the retail trade is now being fought over the proposed parcels post C.O.D. collections system and success seems assured to the retailers if they continue the campaign in the energetic way it has been taken up by the Retail Hardware Association, the dry goods dealers, and others interested.

In the United States, however, the fight has been on for some years and the mail order houses have succeeded in getting rural mail delivery established in many States. The rural carriers are allowed to carry private mail matter from mail order houses but proposals to still further extend these privileges have so far been defeated by the joint fight put up by the hardware and other retail associations. More particulars of these fights will be given in future issues.

This week we desire to draw attention to a proposal recently made that the retail hardware trade fight the mail order houses with their own weapons—a trade catalogue for distribution amongst the farmers and other consumers. The National Hardware Bulletin, organ of the National Retail Hardware Association, has been securing the opinions of manufacturers, jobbers and retailers on the proposition and a result of the replies received has laid it down as an accepted fact that a catalogue would be a good thing if gotten up on right lines as wherever catalogues have been used by dealers they have proved a success. The opinions expressed are strongly against a priced catalogue as prices vary in different sections and even dealers in the same district have not uniform prices. Another strong argument is that uniform prices maintained by a majority of the trade would justify an outcry against a "hardware trust." The Bulletin, in discussing the matter, deduces that such a catalogue cannot be priced, or if priced, the quotations cannot be uniform. It further says:

"Another difficulty presents itself. All dealers do not carry the same goods. A dealer in Nebraska has quarreled with one of the saw manufacturers. Must he perforce advertise that manufacturer's saw? Must he advertise it, when he does not carry the line and would not send away for a sample even to supply an obstinate customer's demand?

"It may be asked why each dealer should not proceed to issue a special catalogue of his own, with local color, showing the lines he is anxious to push. There are two reasons: First, individual catalogues will prove more expensive than when issued by the million. Second, all dealers are not trained in the matter of compiling catalogues nor can they afford to hire a man specially for that purpose. Summarized, the situation is as follows:

"Each dealer should issue some form of catalogue, annually or semi-annually, to people of his community with profit, but the catalogue cannot be priced uniformly, a uniform line of goods cannot be shown, and the work cannot be done by each individual dealer.

"It has been suggested that the National association take up the matter, getting out an individual catalogue for each favorable member. The expense would be minimized by using regulation plates, showing lines each dealer carried and no others. A few pages would be devoted to local matter. The local matter would individualize each catalogue. There would be a country road map, a cut of the principal local buildings, a sketch of the 'oldest inhabitant' and the most popular or successful citizen.

"This catalogue would be as the local dealer wanted it. It would be priced or unpriced as he pleased. It would show no goods he did not carry. It would push no goods he wished to hide. It would cost no more than a general, uniform catalogue, because it would not show so many lines.

"There is one good reason why the National association could not do this. There might be a conflict between two members in the same town. Both might want the catalogue service exclusively. The association could not show favoritism. This objection might be eliminated in some way. The matter ought to be taken up by some private interest."

KEEPING SALESMEN WAITING.

A St. Paul traveling man recently stated that a good buyer never keeps a salesman waiting if it is possible not to, and yet it is true that every salesman losses on an average of two and a half hours each day waiting on buyers. The cost of selling goods is figured in making the selling price and buyers have to pay for it, so that if a salesman's time is lost some one has to stand the loss, and although most buyers would be very much surprised to hear that they pay for it, it is nevertheless true. There are over 100,000 salesmen on the road, whose salary and expense average $10 per day, and their lost time is therefore valued at least at $250,000 a day, which enormous sum must be paid by the buyers, although they get absolutely nothing for it.

KNOCK OFF THE PACKAGE DUTY.

The Government should remove the duty on packages re-imposed under the new tariff. What is the use of it? The excuse that it was imposed because a few importers connived with the shippers, a very remote and impregnant possibility. If they would do this to secure a proportion of their goods free entry, they would do it to secure the same proportion entry at a lower rate of duty. The excuse is a poor one. The duty protects no one and produces no revenue to speak of, but it is a positive nuisance to the trade and a hinderance to business.

KILL THE THING.

Have you sent a postcard to your representative in Parliament asking him to oppose the proposed extension of the parcel post system to assist the big mail order houses? If you haven't do so to-day. It is in the interest of every ordinary retailer that this scheme be killed. What is even more important it is in the interest of the whole country. Tendency to centre trade in the big cities is not in keeping with the successful development of Canada as a nation. A thousand prosperous retailers scattered throughout the country constitute a much greater national asset than a single huge institution in some city and they will better serve the needs of the people.

PROSPERITY AT FLOOD TIDE

A year ago it was thought that the zenith of prosperity had been reached, but it has not taken twelve months to prove that this latter view was incorrect, says Bradstreets of Dec. 29, in a review of Canadian trade conditions. This year, with a steady growth in population and an increasing trade and commerce in all directions at home and abroad, a still greater share of prosperity has fallen to the lot of all classes of this country's inhabitants.

The farmers of Canada have had a splendid year, the country's mines have produced metals and coal as never before, and the output of products of the forest and of the sea compares favorably with that of the previous years. The production of wheat and other grains has been the heaviest in the history of the country. The wheat crop will show an increase of about 10 per cent., for the larger part of which western Canada is responsible. Last year's western wheat crop was in the neighborhood of 85,000,000 bushels, while this year it will run something over 90,000,000 bushels.

One of the most satisfactory features of Canadian trade is that of foreign business. Owing to the fact that government reports are not issued until four or five months after the date reported on, it is impossible to obtain figures covering the latter part of the year, but the report for the fiscal year, which extended half way into 1906, gives a very good indication as to how trade moved, particularly as it is well known that trade in the latter part of this year showed no signs of falling off. The total for the fiscal year was by far the heaviest in the country's history, amounting to $546,929,038, being an increase of $80,616,612 over that of the previous year. It was in export trade that the increase was greatest. The value of the year's exports showed an increase of $44,184,741, the greatest in the history of the country, while the imports increased by $31,646,686. Agricultural exports increased by almost 50 per cent. and those of manufactures by about 20 per cent. To Great Britain, Canada exported 53.96 per cent. of her total exports, against 50.61 last year, and to the United States, 35.68 per cent., against 37.51.

The Golden West.

Canada's present prosperity is largely due to the rapid growth of the western country, the enrichment of western farmers by the high prices for a greater volume of product, and the rapid filling of the country by immigration. Its population has been increased during the past year by well over 100,000 immigrants from Great Britain, the United States and the continent of Europe. The major portion of these have taken up land in the west, and others in the new portions of eastern Canada, but it is in the west that this immigration has most affected the country's advance. The British and American immigration has set a very high average of quality for that of the whole year. The western cattle trade had an exceedingly good year; the cattle were well finished, and shipments were nearly 50 per cent. greater than those of last year. Prices, too, were fairly good. The grain movement was slow owing to the inability of the railroads to properly handle it. At country points, however, it was marketed early, and this had a very good effect upon collections throughout the country, which averaged better this year than they have done for some time. The growth of the manufacturing interests of the west is year by year becoming more pronounced. Winnipeg, among the newer cities, is fast becoming a manufacturing centre, having made considerable progress in this regard during the past year; it is also showing steady growth as a jobbing centre.

Pacific Coast Revival.

The revival in the lumbering and mining industries along the Pacific coast made the year the most remarkable in the history of that part of the country. The lumber mills, particularly, have been unable to keep up with demands even at the high prices ruling, and similar conditions prevail at the mines. The shortage in labor on the coast has been a serious problem. Its cost has advanced greatly, and inferior Asiatic labor has had to be resorted to. The growing of fruit is rapidly becoming an important industry, and a good European trade is hoped for in this connection. The shipping trade has shown a good growth as a result of rapidly increasing trade with the Orient. The crops of Alberta naturally find their outlet on the Pacific Ocean, and flour and grain markets are rapidly being opened in Japan and parts of Africa. Wholesale and retail trade has been good throughout the year and money has been plentiful.

Conditions in Ontario.

Generally speaking, conditions in Ontario and the other older parts of the country have been but little different from those prevailing farther west. Crops generally were good. Fall wheat and most other grains, with the exception of spring wheat, showed an increased total yield. Prices have been good ever since the harvest, and the grain has come forward fairly well. But it was in other lines that farmers were most successful. The dairy season has been an extraordinary one in more than one respect. While the make of cheese was not so heavy as in previous seasons, the high prices prevailing eclipsed anything in the record of the industry. The result was a heavy make of cheese and a light make of butter, in which also prices were high. While cattle prices were not generally good, those for hogs were exceedingly high, and not nearly enough were obtainable. The packing industry suffered on this account. General wholesale trade has had one of the most successful years. The turnover in most lines has been the heaviest on record. The great activity in railroad and general building in all parts of the country has resulted in a scarcity of manufactured steel and iron. Manufacturers have suffered severely in the shortage of labor, and serious delays in making deliveries have occurred.

Canadian banks have had a good year, as shown by annual statements now being published. The one failure, that of the Ontario Bank, was the result of bad management and not of general conditions.

Railway Development.

The scarcity of labor has had some effect upon the work of railway extension. The new Grand Trunk Pacific line is being pushed with all possible speed, and all available men have been working on different parts of it throughout the season. The Canadian Northern, which will be Canada's third transcontinental line, is rapidly being pushed through the west. The same company has completed its line from Toronto north to Sudbury. The Ontario government railway running up into New Ontario has also advanced further during the year. It is rapidly making, tributary to Toronto and other Ontario business centres, a vast area of lands fabulously rich in products of mines and forests. It is along this line the silver mines of Cobalt lie. Where a year ago there was along this line only an occasional lumber or prospecting camp, there are towns and settlements, the existence of which signifies much to older Canada. What the opening of this new country will mean may be gathered from the fact that shipments of ore already run to about $1,000,000 a month. This railroad is also opening up a vast agricultural country well fitted for settlement.

During the past year a good number of settlers have gone into the country, but here is a land extending up to James Bay which will need filling long after western Canada has ceased to be the Mecca of immigrants. It is reasonable to expect its development will do for the industries of eastern and central Canada just what the western expansion is now doing for the country as a whole.

FREIGHT RATES TOO HIGH.

The stove manufacturers of Canada are not satisfied with the new classification made respecting stoves in the recently revised freight rates submitted by the Canadian Freight Agents' Association. The matter will be again discussed by the Freight Association, which is committed to much lower tariffs than formerly.

Don't worry over trifles. If you must worry, pick out something worth while, then get busy.

HARDWARE TRADE GOSSIP

Ontario.

A. Kirpatrick, hardware merchant, Lefroy, called on Toronto jobbers last week.

H. R. Carter, hardware merchant, Chesley, has sold out his business to Davis & Co.

Geo. Fraker, of Fraker & Son, hardware merchants, Brampton, called on the jobbers in Toronto this week.

Cyrus Birge of the Canadian Screw Company, Hamilton, was a visitor in Toronto on Thursday of last week.

W. H. White, of Brandon, Man., was a visitor in Toronto this week, calling on the wholesale hardware merchants.

Wm. Harland, of Harland Bros., hardware merchants, Clinton, was a visitor in Toronto last week calling on the wholesale hardware merchants.

Mr. Ballantyne, of the Sherwin-Williams paint staff in Toronto, was on a visit to the head office, Montreal, for several days last week.

The Kelley Hardware Company suffered loss by fire on Dec. 27. Their stock which was valued at $40,000 was destroyed, but partly covered by insurance.

Max Morrell has started at his new position as sales manager for Rice Lewis & Son, W. R. Tait succeeding him as Toronto representative for Lewis Bros., Montreal.

J. R. Marlow, who has been managing the transportation branch of the C. M.A., has resigned, to take charge of the sales department of the Canada Cycle and Motor Company.

John Harold, manager of the Paris Plow Company was presented with a gold-headed cane by the employees last Saturday evening, as a mark of their esteem towards the manager.

The Canadian Iron & Foundry Co. presented each of its 158 Hamilton employees with a fine Christmas turkey. The company did the same for all its employees at six other plants.

Charlie Boyd, manager of the hardware store of the Younge Estate, Gravenhurst, was a visitor in Toronto several days this week calling on the wholesale hardware merchants.

O. S. Hunter, the newly established hardware merchant, Durham, with his manager, W. Coleman, was in Toronto all last week at Rice Lewis & Son, purchasing their stock, which amounted to about $5000.

W. H. Rumball, hardware merchant, of South Woodslee, has sold his business and property. Messrs. Ebbinghaus and A. Rumball, having purchased the stock of hardware and furniture, and will continue the business in the same stand.

Thomas Chamberlain of the Buck Stove Co., Brantford, had a pleasant task Monday afternoon. He presented to each of the men under his supervision a handsome silk handkerchief to show his appreciation of their work and good feeling towards them.

Adam Taylor, of the Taylor-Forbes Company, Guelph, has been elected one of the Guelph directors of the Commercial Travelers' Association of Canada and Arthur F. Hatch of the Canada Steel Goods Company, Hamilton, a member of the Hamilton Board.

Sir Mackenzie Bowell was showing some visitors around the premises of the Belleville Hardware Company, at Belleville, of which he is president, when he narrowly escaped possibly fatal injuries by being struck by an elevator of the descent of which he was only cognizant just in time. He was standing directly under it.

Alex. Payne, who for some years has been employed on the sample floor for H. S. Howland Sons & Co., of Toronto, has been appointed to the traveling staff, by taking Jack Anderson's place in the Niagara Peninsula. He will no doubt meet with every success, as he is perfectly conversant with every branch of the business.

Sir W. P. Howland, who died New Year's morning in Toronto, was a brother of the late H. S. Howland and uncle of Peleg Howland, president of H. S. Howland & Sons, and George W. Howland of the Graham Nail Works, Toronto. Sir William Howland's life was interwoven in the history of Canada, he having been a "Father of Confederation," and intimately connected with the early development of Western Canada.

Charles Kerr, a 16-year-old Woodstock boy, met with a serious accident a fortnight ago. He was working for Whitney Bros., tinsmiths, and was assisting in the loading of a boiler on a sleigh at the station. The boiler was successfully placed in position, and Kerr stood behind to hold it on. When the sleigh started the boiler slipped, knocking Kerr to the ground, and the boiler fell across the boy. Three fingers were severed, and his back was injured, but not broken.

Quebec.

William Gravel, of Terrebonne, Que., was in Montreal last week.

D. Huette, of St. Hyacinthe, was in Montreal purchasing supplies.

C. Williscraft of Smiths Falls, was a visitor in Montreal last week.

P. Filian, of St. Therese, Que., was in Montreal buying general goods.

W. H. Evans of the Canada Paint Co., Montreal, spent New Year's Day in Ottawa.

Edgar G. Powell has left for Winnipeg, to represent the J. W. Harris Co., Montreal.

L. J. Kirouack, of Upton, Que., called at some of the Montreal wholesale houses last week.

H. W. Aird, of the Canada Paint Co., Montreal, who has been sick for some time, has recovered.

Ernest Bureau, of the traveling staff of Lewis Bros., spent a few days in New York as the guest of his brother-in-law.

Edgar W. Wilkinson, of Harrison Bros. and Howson, cutlery manufacturers, was a visitor at the Montreal office of Hardware and Metal yesterday.

C. C. Ballantyne, manager of Sherwin Williams Co., Montreal, has taken up his duties at the Harbor Board, as one of the three new harbor officials.

F. W. Bronton, Winnipeg, formerly representing the Stewart Manufacturing Co. of Woodstock, Ont., has joined the traveling staff of F. W. Lamplough & Co. He will travel from coast to coast.

At an early hour Thursday morning, Jan. 3, 1907, a disastrous fire cleaned up the best part of a block of Montreal business houses. Among the sufferers were the Montreal factory of the Gillette Safety Razor Co., the Beaver Rubber Clothing Co., the Otis Fensom Elevator Co., and the Dodge Manufacturing Co. of Toronto.

Western.

Burns Bros., hardware merchants, Kawende, Man., will move their stock of hardware, etc., to Portage La Prairie, where they will carry on business.

R. P. McLennan, of McLennan, McFeely & Co., Vancouver, has been nominated as one of the Liberal candidates for Vancouver city in the coming B. C. elections.

McKinleys' hardware store of Ninga, Man., was destroyed by fire last week, damage amounting to $7,000 on stock and $3,000 on building, partly covered by insurance.

Joseph Cahill, one of the oldest commercial travellers in the West, a representative of the Ashdown Hardware Company, died of pneumonia on January 2, in Winnipeg. The body was sent to his former home in Peterboro', for burial.

Smith & Ferguson, hardware merchants of Regina, Sask., have sold their business to Peart Bros., of that place, who control the Western Hardware Company, which will mean an amalgamation of these two powerful business houses. The price paid for the business was in the neighborhood of $125,000 for the business and property. J. W. Smith, proprietor of the Smith & Ferguson business, will continue in the coal business.

Maritime Provinces.

G. L. Munroe, hardware dealer, was a heavy loser in the recent fire at Londonderry, N.S., having only $1,000 insurance.

S. S. Wetmore, travelling representative for A. M. Bell & Company, Halifax, is recovering from a serious attack of influenza.

M. F. Irwin, St. John, N.B., representative of the McClary Manufacturing Company, London, spent the Xmas holidays at London. His family will locate at St. John in January.

L. L. Libby, Halifax, manager of the Canadian Rubber Company, spent the Christmas holidays at his old home at Portland, Maine. Before leaving, the staff gave him a Christmas present in the form of a fine travelling bag.

Markets and Market Notes

(For detailed prices see Current Market Quotations, page 70.)

THE WEEK'S MARKETS IN BRIEF.

TORONTO.

Lock Sets—Now 37½ and 10 per cent.

Hinges — Light and Heavy tee and strap, advancing; also, wrought butts now 70 per cent.; crate hinges and back flaps, 65 and 5 per cent.; hinge hasps, 65 per cent.

Building Paper—E2, D2 and Surprise.

Stanley Tools—20 per cent. advance.

Bar Iron—Advanced to $2.30.

Galvanized Sheets—Appollo advanced 10c.

Boiler Tubes—Advances on some sizes.

Compression and Fuller Work — Lower discounts.

Montreal Hardware Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, Jan. 4, 1907.

The holidays are past and business has again assumed its usual state.

Jobbers claim that prospects are exceedingly bright for the first three or six months of the year at least.

Prices are still going steadily up.

Sockets firmer, chisels and prune knives have advanced about 10 per cent.

Peterboro and Gurney locks have also advanced, the new discount being 37½ and 10 per cent, instead of 45 and 10 per cent.

Other markets remain about the same.

AXES.—We quote: $7.60 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen. follows: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34-inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS—The normal business is being done, at the following prices: "Prism" globes, $1.20; Cold blast, $6.50; No. 0, Safety, $4.00.

COW TIES AND STALL FIXTURES — We still quote: Cow ties discount 40 per cent. off list; stall fixtures, discount 35 per cent. off list.

SLEIGH BELLS.—Some orders are being sent forward this week. We quote: Back Straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50; pear shape, $1.15 to $2; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

RIVETS AND BURRS.—Copper is still high and advance in ore expected. We quote: Best iron rivets, section, carriage, and wagon box black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 27½ per cent. off, and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 15 per cent., subject to usual charge for half-pound boxes.

HAY WIRE.—Last week's advanced prices are being firmly held. Our quotations are: No. 13, $2.55; No. 14, $2.65; No. 15, $2.80; net cash, f.o.b. Montreal.

MACHINE SCREWS.—Trade is about as usual. We quote: Flat head, iron, 35 per cent.; flat head, brass, 35 per cent.; Felisterhead, iron, 30 per cent.. Felisterhead, brass, 25 per cent.

BOLTS AND NUTS.—Bolts are still scarce, no relief from the shortage having been experienced. Our discounts remain: Carriage bolts, 3 and under 60 and 10; 7-16 and larger, 55 p.c.; fancy carriage bolts, 50 p.c.; sleigh shoe bolts, ⅜ and under, 60 per cent.; 7-16 and over, 50 per cent.; machine bolts, ⅜ and under, 60 per cent.; 7-16 and larger, 55 per cent.

HORSE NAILS.—Sales this week have been large and prices are well maintained. Discounts are as follows: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS.—The market is now firm at $2.30 per keg base f.o.b. Montreal.

CUT NAILS—We continue to quote: $2.50 per 100 lbs.; M.R.M. Co., latest $2.30 per keg base. f.o.b. Montreal.

HORSESHOES.—A steady business is reported. We quote as follows: P.B. new pattern, base price improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 lbs. More than three sizes, 25c. per 100 lbs extra.

BUILDING PAPER—Conditions remain unchanged.

CEMENT AND FIREBRICK—We are still quoting the following prices: "Lehigh" Portland in wood, $2.54, in cotton sacks, $2.39; in paper sacks, $2.31. Lefarge (non-staining) in wood. $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American $30 to $35; White Bros.' English cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN.—Last week's advance still holds. We are quoting as follows: 5-16 inch, $4.40; 3-8 inch, $3.90; 7-16 inch, $3.70; 1-2 inch, $3.50; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.20; 7-8 inch, $3.10; 1 inch, $3.10.

SHOT—Our prices remain as follows: Fhot packed in 25-lb. bags, ordinary drop AAA to dust, $7 per 100 lbs.; chilled, No. 1—10, $7.50 per 100 lbs.; brick and seal, $8 per 100 lbs.; ball, $8.50 per 100 lbs. Net list. Bags less than 25 lbs., ½c. per lb. extra, net; f.o.b. Montreal, Toronto, Hamilton, London, St. John, Halifax.

AMMUNITION. — Trade is normal. We are quoting as follows: Loaded with black powder, 12 and 16 gauge, per 1,000, $15; 10 gauge, per 1,000, $18; loaded with smokeless powder, 12 and 16 gauge, per 1,000, $20.50; 10 gauge, $23.50.

GREEN WIRE CLOTH. — Bookings are very satisfactory. Our prices are: In 100 foot rolls, $1.62½ per hundred square feet, in 50 feet rolls, $1.67½ per hundred square feet.

Toronto Hardware Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Jan. 4, 1907.

Hardware markets are very brisk, and several advances are in force this week. The manufacturers of hinges in Canada have been compelled through the rapidly increasing prices of raw material and labor, to again advance prices in hinges, butts and builders' hardware of all kinds. Raw material for these lines has been exceptionally scarce and merchants would do well to order early for their season's requirements as it is possible that when the building season starts hardware stocks will be entirely run out of staple sizes. The demand from the West is so great that Ontario and Quebec jobbers will find it difficult to secure supplies. We are now quoting for, heavy tee and strap, 4 in., $6.25; 5 in. $6.00; 6 in., $5.75; 8 in., $5.50; 10, 12 and 14, $5.25, per 100 lbs. net. Light tee and strap hinges now quoting at 65 per cent., formerly 65 and 10. An advance is also made in Peterborough and Gurney locks, advancing from 45 and 10 per cent. to 37½ and 10, present quotation.

Building paper is also quoted at an advance, E.2 and Surprise now 50c. and D.2. at 40c. The cause of the advance of building paper is due to the raise in raw materials, with the ever increasing demand for these goods.

Stanley tools have all advanced 20 per cent. Travelers have again resumed

their duties on the road and orders continue coming in very brisk.

AXES AND HANDLES—The business continues very brisk in these lines. Still having large demands from Northern Ontario.

BUILDERS' HARDWARE—Orders have started for this line as retailers see the advantage of ordering early. As a shortage is likely to be reported in some lines.

SPORTING GOODS—Hockey sticks and skates continue to sell briskly. A banner year is reported in all lines of these goods.

CHAIN—We still continue to quote: 5-16 in. $3.50; 9-16 in., $3.55; 1/2 in., $3.60; 7-16 in., $3.85; 3/8 in., $4.10; 5/16 in. $4.70; 1/4 in. $5.50.

RIVETS AND BURRS—No change is anticipated in these articles, and remain as quoted last week, 25 per cent. on rivets and 15 per cent. on burrs.

SCREWS—Stocks are being rapidly repleted, as manufacturers are giving their best efforts to meet the demand.

BOLTS AND NUTS—Large orders for these are prophesied as a great deal of structural work is being done throughout the country.

TOOLS—Carpenters' tools, hand saws etc., are in great demand. Retail merchants repleting their stock for spring.

SHOVELS—Not much doing in shovels at the present time, but spades, tiling and garden, have started to move.

LANTERNS—The demand still exists and selling $6.50 per dozen.

EXTENSION AND STEP LADDERS—Prices continue as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent.

POULTRY NETTING—We quote: 2-inch mesh, 19 w.g., discount 50 and 10 per cent. All others 50 per cent.

WIRE FENCING.—Barb and plain twist fencing, galvanized and coiled spring wire are all firm at the advanced prices.

OILED AND ANNEALED WIRE—(Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS—Nails still remain firm at the advanced price, but owing to the high price of raw material, another advance is warranted.

CUT NAILS—We quote $2.30 base f.o.b. Montreal, Toronto 20c higher.

HORSENAILS—"C" brand, 40, 10 and 7½ off list. "M.R.M." brand, 55 per cent. off. "Monarch" brand, 50 and 7½ off. "Peerless," 50 per cent. off.

HORSESHOES—Our quotations continue as follows: P.B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toeweight, all sizes 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per 100 lbs. extra; more than three sizes in a keg, 25c. per 100 lbs. extra.

HORSE BLANKETS AND SLEIGH BELLS—Owing to the mild weather lately the demand has fallen off some, but should the cold weather return will liven them up.

BUILDING PAPER—The advance on building paper is owing to the high price of raw material, also the large demand for paper.

CEMENT—We quote: For carload orders, f.o.b. Toronto, Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Portland, $2.05 upwards.

FIREBRICK—English and Scotch fire brick $27 to $30; American low-grade, $23 to $25; high-grade, $27.50 to $35.

HIDES, WOOL AND FURS.—The supply of hides is in excess of the demand but the course of the market is uncertain. Prices are slightly lower than a week ago.

Montreal Metal Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, January 4, 1907

Copper is still advancing. Stocks are light, and deliveries are somewhat hard to get.

Many large metal brokers are unable to quote.

The expected revision in the boiler tube prices has at last taken place.

There have been many little fluctuations during the week, but the tone of the market still remains very strong.

There is a rumor about that a very important advance is about to take place in the British market, but this has not been confirmed.

There have also been several considerable contracts placed for structural steels, etc.

COPPER.—Still further advances have taken place this week, and it is thought that the market will go higher. We are now quoting: Ingot copper, 26c to 26½c; sheet copper, base sizes, 34c.

INGOT TIN.—This metal continues firm, but we still quote: 46½c. to 47c. per lb.

ZINC SPELTER.—Zinc is in a very strong position in the market. We continue to quote: $7.25 to $7.50 per hundred pounds.

PIG LEAD.—Higher prices in England have boosted quotations here and we now quote: $5.50 to $5.60 per hundred pounds.

ANTIMONY—Our price remains 27½ to 28c per pound.

PIG IRON.—We still quote as follows: Londonderry, $24.50; Carron, No. 1, $24.50; Carron, special, $23.50; Summerlee, No. 2, selected, $25.00; Summerlee, No. 3, soft, $23.50.

BOILER TUBES.—The expected new prices have at last come to light, 1½ to 2 inch, $9.50; 2¼ inch, $10.35; 2½ inch, $11.50; 3 inch, $13.00; 3½ inch, $17.00; 4 inch, $21.50; 5 inch, $45.00.

TOOL STEEL—We quote: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Hardening," 65c. per pound; Conqueror, 7½c.; Conqueror high speed steel, 60c.; Jowitt's Diamond J., 6½c. to 7c.; Jowitt's best, 11c. to 11½c.

MERCHANT STEEL.—Our prices are as follows: Sleigh shoe, $2.25; tire, $2.40, spring, $2.75; toecalk, $3.05; machinery iron finish, $2.40 ruled machinery steel, $2.75; mild, $2.25 base and upwards; square harrow teeth $2.40; band steel, $2.45 base. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING—There is an advance of 25 cents per hundred lbs. over last week's quotations. Present prices are: 3-16 inch to ¼ inch, $7.25; 5-16 inch to 11-32 inch, $6.20; ⅜ inch to 17-32 inch, $5.15; 9-16 inch to 47-64 inch, $4.45; ¾ inch to 17-16 inch, $4.10; 1½ inch to 3 inch, $3.75; 3¼ to 3 7-16 inch, $3.92; 3½ inch to 3 15-16 inch, $4.10; 4 inch to 4 7-16 inch, $4.45; 4½ inch to 4 15-16 inch, $4.80. This is equivalent to 30 per cent. off list.

GALVANIZED IRON.—Firmness prevails in the market. We are still quoting Queen's Head, 28 gauge, $4.60 to $4.85; 26 gauge, $4.45; 22 to 24 gauge, $3.90; 16 to 20 gauge, $3.75; Apollo, 28 gauge. $4.45 to $4.70; 26 gauge, $4.30; 22 and 24 gauge, $3.75; 16 and 20 gauge, $3.60; Comet, 28 gauge, $4.45 to $4.70; 26 gauge, $4.30 to $4.45; 22 and 24, gauge, $3.75 to $4.00; $16 to 20 gauge, $3.60 to $3.85; Fleur-de-Lis, 28 gauge, $4.45 to $4.70; 26 gauge, $4.30; 22 and 24 gauge, $3.75; 16 to 20 gauge, $3.60; Gorbals "Best Best," 28 gauge, $4.45; Colborne Crown, 28 gauge, $4.45; 26 gauge, $4.30; 24 gauge, $3.75. In less than case lots, 25c extra.

Toronto Metal Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Jan. 4, 1907

The markets this week are comparitively quiet, few changes being made, and business being interrupted slightly

by the holiday week as well as by some houses taking stock. All prices remain very firm, however, the changes made all being increases.

Bar Iron has advanced another peg, and is now at $2.30, with 2 per cent. off. As indicated by us some weeks ago, the turn of the year has strengthened rather than weakened the bar market. Appollo galvanized sheets are also up about ten cents, and there is talk of other sheets advancing. The only other change is in boiler tubes, certain sizes of which show advances.

Copper and lead keep very firm with stocks still short, and deliveries hard to get. Tin is also firm.

Complaints of slow deliveries from Montreal are still coming in, one case being a car load of bar iron which took from November 5, to December 25, to be transported from the wharf to the customer, the rail trip occupying five days.

PIG IRON.—Hamilton, Midland and Londonderry are off the market, and Radnor is quoted at $33 at furnace. Middlesborough is quoted at $24.50, and Summerlee, at $26 f.o.b., Toronto.

BAR IRON.—Bar continues hard to get and we still quote: $2.30, f.o.b., Toronto with 2 per cent. discount.

INGOT TIN—Buying is still lively and prices unchanged at 46 to 46 1-2c per pound.

TIN PLATES—Market continues active and prices firm at recent advances.

SHEETS AND PLATES.—Apollo galvanized sheets has been advanced ten cents, and is now quoted at $4.70 for 10 3-4 ounce. Active buying is reported with prices steady. Stocks are light.

BRASS.—We continue to quote: 26 to 27½c per pound for sheets. Brass has advanced 3c per pound.

COPPER—Shortages are reported with prices still on the upward climb. We now quote: Ingot copper $26 per 100 lbs., and sheet copper $31 to $32 per 100 lbs.

LEAD—Market is active and prices very firm. We quote: $5.40 for imported pig and $5.75 to $6.00 for bar lead.

ZINC SPELTER—Stocks continue light with market firm and active. We quote 7½c. per lb. for foreign and 7c. per lb. for domestic. Sheet zinc is quoted at 8 1-4c. in casks, and 8 1-2c. in part casks.

BOILER PLATES AND TUBES—We quote: Plates, per 100 lbs., ¼ in. to ½ in., $2.50; ⅝ in., $2.35 heads, per 100 lbs., $2.75; tank plates, 3-16 in., $2.65; tubes, per 100 feet, 1¼ in., $8.50; 2, $9; 2 1-2, $11.30; 3, $12.50; 3 1-2, $16; 4, $20.00. Terms, 2 per cent. off.

ANTIMONY—Market is active, and stocks scarce. Prices firm at 27c. to 28c.

OLD MATERIAL.—Dealers' buying prices still continue as follows: Heavy copper and wire, 18½c., copper and wire, 18 1-2c. per lb.; light copper 16½ per lb.; heavy red brass, 16½c per lb.; heavy yellow brass, 14½c per lb.; light brass 10½c per lb.; tea lead, $3.70, per 100 lbs.; heavy lead, $4.10 per 100 lbs., scrap zinc, 4½ per lb.; iron No. 1 wrought, $14.00; No. 2 wrought, $6 to $8; machinery cast scrap, $16.50 to $18; stove plate, $13 to $14, malleable and steel, $8; old rubbers, 9c per pound; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—The following prices are quoted on coal, slack being short.

Standard Hocking soft coal f.o.b. at mines, lump $1.75, ¾ inch, $1.65, run of mine, $1.40, nut, $1.25; N. & S. $1.10; P. & S., 85c.

Youghiogheny soft coal in cars, bonded at bridges; lump, $2.90; ¾ inch, $2.70; mine run, $2.60; slack, $2.25.

United States Metal Markets

From the Iron Age, Jan 3 1907.

The conviction is general throughout the iron industry that the present tremendous rate of consumption will continue during the first half of the current year, coupled with prevailing generally profitable prices.

There are very many who are acting on the belief that work for full capacity at present or even better prices is assured for the whole of the year 1907. They point to the order books, which on the surface look very encouraging indeed, but which might be turned to a ragged exhibit, after a rush of cancellations such as the trade has witnessed before under similar conditions. There is a disposition to exaggerate the stability of "orders" which it is well to guard against.

The iron industry is passing again through one of its frequent experiences of being caught unawares by a rapidly expanding consumption, followed by a feverish activity to provide adequate producing facilities, which at first fall into line disappointingly slowly and then make themselves felt surprisingly suddenly. That may make its appearance during the second half of 1907.

In its last analysis the course of events in the second half of 1907 will depend first upon the crops, and second upon the ability of our country to finance the betterments and enlargements of its producing and transportation facilities. Time only can tell as to the first, while as to the second we may have ample warning through long continued tightness of the money market.

The holiday week has not sensibly affected the activity which has characterized the markets for some months past. In the Eastern pig iron markets there have been further sales of basic pig iron, and some round lots of foundry and forge iron have been placed. The Buffalo furnaces during the last two weeks of the year booked about 50,000 tons of malleable and foundry iron, and there has been some lively buying for the last half in the Chicago district, with more pending. As yet nothing has been done in the way of purchases of large lots of foreign foundry iron for agricultural interests in the West.

The report is current that two Western roads have placed orders aggregating 90,000 tons for 1908 delivery, which may be interpreted as meaning that so much rolling capacity has been engaged.

Among the sales of structural material is a lot of 4,500 tons for five buildings in San Francisco. It is believed that during the current year a very considerable tonnage will be required for the stricken city. This is in line with the earlier expectations that the true demand would not develop until a considerable time after the disaster.

From the Iron Trade Review, Cleveland, Jan 3, 1907.

The iron and steel industry enters the new year with the demand for both raw and finished materials of all kinds much stronger than at the beginning of 1906. The increase in consuming capacity, especially in the east, has been tremendous during the past year and there are no indications that production will be greater than the demand. A very active market for pig iron prevailed during the closing days of the year in the east and in Chicago, though in other centres buyers were more conservative. Heavy sales of basic are reported in the east, while foundry consumers of the most conservative class are buying extensively for last half delivery. Foreign iron is reaching further westward, the past few days witnessing the first sale of British iron in Cleveland for nearly five years. The southern pig iron situation is firm, though hampered by the car shortage which shows little improvement.

Two large eastern Pennsylvania rail manufacturers have announced that they will not take any more orders for standard sections for delivery after August, except at $30, an advance of $2 per ton. This is the highest price asked for Bessemer rails since 1901, and the action is significant as indicating an increasing spirit of independence among manufacturers. It is not expected that the leading producer will advance quotations. The action of the independents emphasizes the strength of the finished material market, where the advances have not been as rapid as in crude and semi-finished materials.

In other finished lines, with the exception of structural materials, there is very brisk demand. Plate and sheet specifications are extremely heavy, scarcely a ton of old contracts being unspecified for at the close of the year. Merchant bars are active and the demand for wire products is undiminished.

The holiday season has been productive of sharp decline in sheet quotations at Chicago and other centres, though the market as yet cannot be called weak. There is a serious coke shortage in the Chicago district with some relief being afforded by the output of local by-product ovens.

London, Eng., Metal Markets

From Metal Market Report, Jan. 3, 1907.

Cleveland warrants are quoted at 61s. 10½d and Glasgow Standard warrants at 61s making price as compared with last week 9d lower on Cleveland warrants, and 6d lower on Glasgow Standard warrants

TIN—Spot Tin opened steady at £193 10s., futures at £194 10s., and after sales of 150 tons of spot and 150 tons of futures closed steady at £193 10s. for spot, £194 10s. for futures making price compared with last week £3 lower on spot and £1 12s. 6d. lower on futures.

COPPER—Spot Copper opened steady at £105 5s., futures £106 12s. 6d., and after sales of 250 tons of spot and 1000 tons of futures, closed steady at £105 5s for spot, and £105 12s. 6d. for futures making price compared with last week 10s. lower on spot and £1 13s. 6d. higher on futures.

LEAD—The market closed at £19 18s. 9d., making price as compared with last week 1s 9d. higher.

SPELTER—The market closed at £28, making price as compared with last week unchanged.

N.B. Hardware Trade News

St. John, N. B., Dec. 31.

The close of the year 1906 is the closing of a year of good business for the hardware people of New Brunswick. That seems to be the consensus of opinion, though they are, of course, some of those persons always to be found with words of complaint. The demand for hardware goods has been steady throughout the year, apparently there has been considerable money in circulation and bad debts seem to have become a trifle less numerous, some dealers reporting a marked growth in the tendency of customers to do cash trade. In St. John itself there has been a rather poorer business in builders hardware than in some other years. The number of new buildings put up has not been what was hoped for and consequently hardware of the type mentioned has not been so strongly in demand as in some other years. The greater part of what may be called the building operations of the year have not come in the erection of new but the remodelling of old structures. Naturally, too, under these circumstances the men of the plumbing department of many of the hardware concerns were not as busily engaged as usual. The mildness of last winter and the indications of mild weather during the coming season have doubtless affected the demands for plumbing. In other lines of the hardware trade, however, 1906 has been a successful year in St. John. Perhaps the most striking feature of the markets was the practically unexampled stiffness of prices. Apparently, too, there is no prospect of any change in price conditions in the immediate future. Indeed the tendency seems to be towards even higher figures than those now prevailing.

The Christmas trade, the dealers say, was excellent. Certainly it seemed to your correspondent that the number of people thronging city stores was greater than usual and that it was only natural to believe that business would be larger as a consequence. Dealers in sporting goods cannot be pleased, however, at the mildness of the weather. A continuance of it must surely mean a poorer trade in winter sporting goods than has been anticipated.

* * *

Once before in this column attention was drawn to the window dressing of St. John hardware stores. At that time your correspondent expressed doubt as to whether or not the hardware men here gave adequate attention to the dressing of their store windows. The doubt still exists, indeed, it has grown stronger. Some of the men apparently give practically no thought to this department of their business; others give but very little. At Christmas time the special efforts put forth—in some cases one is lead to ask: were there any efforts worth the name?—did not result in the production of any displays worthy of especial note. One or two of the windows attracted a good deal of attention but it is not at all clear that this fact is attachable to skilled window dressing. Surely, St. John hardwaremen should give this matter more attention. The question may be raised, too: Do our merchants give sufficient careful thought to the method of their advertising? Some of the advertisements seen are certainly not particularly forceful.

* * *

The business done by the stove dealers has on the whole been very satisfactory. City trade has been good and with some firms at least, the sale of stoves to persons in the country has been exceptionally gratifying. The outlook is believed to be for somewhat higher quotations in the Spring than prevailed last season.

Metal prices continue unusually strong. It is thought by local men that further advances are imminent.

* * *

It is reported that a car making plant will shortly be started here. There are many rumors but little definite information has so far been obtainable. Another report had it that the Maritime Rail Works Company has planned the erection here of a much larger plant than it now has. Rolling mills on a generous scale are said to be included in the plan. Mr. S. B. Elkin, secretary-treasurer of the company, has denied the truth of the report. At the same time there is good reason for believing that the company anticipates development here or elsewhere. It may be that Halifax is under consideration as offering a desirable location for an enlarged place for the concern.

* * *

The regular meeting of the Maritime Hardware Association was recently held here. It has not transpired, however, that anything more than routine business was under discussion.

* * *

Mr. Charles Clark, for some years a traveling representative of the Thomas Davidson Company, is to join the staff of the National Cash Register Company.

N.S. Hardware Trade News

Halifax, N.S., Jan. 1, 1907.

The year just closed has been a remarkably prosperous one for the hardware merchants of Halifax. All branches of the trade have been brisk, and the outlook for the year 1907 is most promising. The nail situation now absorbs considerable attention, the record advances having caused the trade to wonder what the next move will be. Nails are now quoted at $2.60 base, for cut, and $2.50 for wire, the highest prices recorded here for a long time.

The yield of gold in Nova Soctia during the past year is estimated at 13,000 ounces, the value of which is $260,000. The gold mining industry has been rather quiet in Nova Scotia for some time past, but the coming year will probably witness a revival of the industry. Several properties have changed hands, and the new owners intend to develop them on an extensive scale. The property at Oldham which has been a big producer in the past is being pumped out, and good returns are anticipated. At Isaac's Harbor and other places considerable development is now going on, and in several gold bearing sections of the Province, new machinery is being installed.

B.C. Hardware Trade News

December 28, 1906.

No class of labor observes the Christmas holiday season more religiously (though not in a religious sense) than the loggers. Every steamer arriving from up-coast points for the past week or more has brought down a full passenger list, nine-tenths of whom were loggers intent on having a really good time during the holiday week in the coast cities. A slight excuse is given these men at this season for as a rule in northern logging districts there is a good deal of snow, even at the coast, and the damp character of snow in the woods close to the ocean makes logging operations difficult. Be that as it may not less than a thousand to fifteen hundred sturdy loggers have left the lumber camps to make merry in the city. The effect is felt directly in the log market for no mills have had a surplus stock on hand and the winter has not found any store ahead as very often occurs

A result of the temporary reduction in the output is an increase in price and no logs can be bought at less than $10 per thousand at the camps, while it takes $1.50 to tow them to the mill. No wonder then that mill men are already discussing another raise in the price of the sawn lumber. This too, when demand is usually less than at other times. How the mills are going to cope with next season's demands is difficult to see for even from the prairie the call for lumber has not let up as it usually does in the winter. The annual shut-down of most of the mills is likely to be very much reduced and the needed overhaul made in short order this year, for time is valuable when all lumber cut is sold months ahead.

Facing a new year, the province of British Columbia finds itself in condition of unprecedented prosperity. In the three chief industries, mining, lumbering and the fisheries, most satisfactory results have marked the year 1906. In the lumber industry more especially, conditions are extraordinary. That the present prices of lumber, high as they are in comparison with a few years ago, are to remain and perhaps increase, is the opinion of many well posted in the trade. Very greatly increased cost of production is the chief reason given for the belief that price of lumber is up to stay. But the great and growing demand in the Canadian Northwest is perhaps the greater factor. Mills simply cannot keep up with their orders. Usually the winter season marks a lessening of demand from the prairie provinces, but the shipments have been so far short of requirements during the past season, that orders have kept up right along, and many orders for next year's business have already been placed.

A good indication of the expansion of the lumber trade in B.C. is taken from the reports of the provincial department of Lands and Works, under which all timber leases are made and dues collected. The returns from this source in 1905 were nearly three quarters of a million dollars. For 1906, the Chief Commissioner is authority for the statement that the receipts of revenue from timber sources are expected to total $1,000,000. There is but one explanation, and that is that the timber areas of B.C. are becoming valuable in the eyes of the timber men and capitalists, and the big demand for timber is a guarantee that the forests of B.C. will be drawn on indefinitely, and for increasing amounts every year.

Some interest is evinced among timber operators as to the outcome of representations made recently to the government by loggers and mill men for cancellation of reserves for pulp leases. In each case it is the idea to cancel leases which have been held speculatively, and not to hamper a concern actually endeavoring to develop pulp timber reserved. There are a number of large areas so reserved, and so far, with but one exception, that of the Canadian Pacific Sulphite Pulp Co., which is developing its holdings at Swanson Bay, and intends going ahead with a pulp mill, nothing has been done since these leases were granted under special regulations enacted some three or four years ago.

* * *

New Westminster is rapidly coming to the front as a manufacturing centre. Its new glass works, the Crystal Glass Co., being the name of the concern, is rapidly being got into shape, the New Westminster Soap Co., another new industry, is also being put on active basis, while the Schaake Machine Works is enlarging its plant. The Brunette Saw Mill is also erecting a mill for cutting cedar lumber and shingles.

Nanaimo industries are progressing favorably. A new coal company has been formed to operate on veins some 16 miles from the city, the Western Fuel Co. is also contemplating enlarging its works and improving its loading facilities at the wharves. A large cold storage plant is also to be established by a company now being organized, the intention being to furnish storage facilities for storing fruit, fish, dairy products and other perishables, while waiting transportation. The Dominion Government is to be asked for a bonus of $100,000 under existing regulations by which a bonus of 50 per cent. of the cost is given such plants, the rates charged for service, being in return under regulation of the Dominion Department of Agriculture.

The Alley line steamer, Pondo, from New Zealand, reached port on Wednesday with a 2,000 ton cargo, mainly consisting of wool, flax and hardwood, with some hundreds of tons of raw sugar from Fiji for the B.C. Sugar Refinery. The shipments of New Zealand wool go across the country to Montreal. On her outward voyage the Pondo, which is scheduled to sail Jan. 4, will take large consignments of Canadian machinery. Capt. Large of the Pondo saw the New Zealand Exhibition at Christchurch and he states that the Canadian exhibit is the most popular in the whole exhibition.

* * *

The Victoria Trades & Labor Council objects to the contractors for the new Canadian government hydrographic steamer, the B.C. Marine Railway Co., importing the machinery for the new vessel from England instead of making it locally as was the understanding when the contract was awarded. The vessel is to be built at Esquimalt.

* * *

Provincial Mineralogist Robertson, is authority for the estimate that the output of B.C. mines for 1906 will exceed in value the output of 1905 by over 2½ millions of dollars. He bases his figures on the increased prices paid for the principal metals, silver, copper and lead, while admitting that though strikes at Fernie in the coke-producing district, the mines were hampered for fuel and the smelters were also reduced.

According to Mr. Robertsons figures, there were 3,400,000 ounces of silver mined last year, 37,692,000 lbs. of copper, and 56,580,000 of lead. These figures may not be exceeded, but silver has netted producers 7c more per ounce this year, copper 4c per lb. more, and lead 1c per lb. more.

Mr. Robertson looks for a marvellous development in mining in the new Telkwa country, tributary to the Skeena River, and which will be opened up by the G.T.P. Vast deposits of coal as well as very rich veins of copper ore have been located. Several companies have already been formed to open up some of these properties.

* * *

Local hardware market notes are featureless, almost, since the Christmas trade is over. In builders' hardware, nails have gone up to $3.10 for wire nails. Turpentine is now quoted at $10.85 instead of $10.25.

* * *

Extreme activity marks all lines connected with the lumber industry. Within the week, two of the largest mills on Burrard Inlet have changed ownership. In both cases local or at least Canadian capital has been mainly interested, which is a change. Most of the big deals of late years have been made on capital brought in from the United States.

The Pacific Coast Lumber Company, which has had two managers in the year has been turned over to a syndicate headed by Mayor Buscombe of Vancouver and the new owners will take charge at the beginning of the year. Geo. McCormick one of the heaviest stockholders, and his Eastern associates have combined to sell a controlling interest in this splendid mill to the new owners. Geo. McCormick, jr., has been managing since the retirement of W. L. Tait, retires and the new owners will name their manager at the time they take over the mill.

At the same moment that they sold the Pacific Coast mill the McCormick interests were negotiating for the purchase of the Canadian Pacific Lumber Company's mill at Port Moody. This deal was consummated on the same day that the sale of the Pacific Coast mill was completed, though one did not depend on the other. The Port Moody mill was owned by a company comprised of T. W. Paterson, M.P.P., of Victoria, his nephew T. Frank Paterson, of Vancouver and Messrs. Perry D. Roe and Robert Abernethey of Port Moody. These gentlemen will all retire, for the present from active mill-operation on the coast. T. W. Patterson never took an active part in the management of the mill, while T. F. Patterson is now heavily interested in logging operations and handling timber limits. Messrs. Roe and Abernethey are not yet decided as to their movements, but still retain interests on the coast, which will take up their attention.

Another change in mill proprietorship is expected to take place at the end of the year. The McLaren sash and door factory, known as the Vancouver Sash & Door Co., has been bought out by Messrs. Robertson & Hackett, sawmillers, whose mill is right beside the factory on False Creek. Some time ago they had part of their plant burned and the purchase of the factory gives them equipment to replace that which was destroyed.

* * *

Coal demand is very keen on the coast at the present moment. The big Treadwell mine in Alaska has had to shut down its stamp mill for want of fuel, and they are bringing it from Australia. The difficulty is that not sufficient increase in the working staff at the various coast mines has been made to provide for the greatly increased consumption.

With the completion of the Nicola valley branch of the C.P.R. a very short line from the rich Nicola coal fields to the coast has been provided. One coal company is getting ready to ship though it will be three months before it will do so. Others are preparing to operate also, now that the rails have been laid.

MANITOBA HARDWARE AND METAL MARKETS

(Market quotations corrected by telegraph up to 12 a.m. Friday, Jan. 4 1907.)

Room 511, Union Bank Building, Office of HARDWARE AND METAL, Winnipeg, Man.

The Christmas trade in all lines of hardware and metal was an exceptionally good one and wholesalers state that they are highly gratified with the business done. With the arrival of the holidays, business became quiet and the past week has been comparatively dull. Most of the local firms are preparing for stock-taking operations and getting ready for the New Year's trade. Prices hold firm at practically no change from the previous week. Judging from the reports of builders the coming year will witness a renewal of last season's remarkable activity in building and all supplies needed in such operations will be in active demand.

LANTERNS. — Quotations are as follows: Cold blast, per dozen, $6.50; coppered cold blast, per dozen, $8.50; cold blast dash, per dozen, $8.50.

WIRE—We quote as follows: Barbed wire, 100 lbs., $2.90; plain galvanized, 6 to 8, $3.39; 10, $3.50; 12, $3.10; 13 $3.20; 14, $3.90; 15, $4.45; 16, $4.60; plain twist, $3; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS — Lists and discounts are quoted as follows: No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per pound. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS.—Quoted now at $2.70 per keg.

CUT NAILS.—As noted last week cut nails have been advanced to $2.90 per keg.

PRESSED SPIKES — Prices are quoted as follows since the recent advance: ¼ x 5 and 6, $4.75; 5-6 x 5, 6 and 7, $4.40; ⅜ x 6, 7 and 8, $4.25; 7-16 x 7 and 9, $4.15; ½ x 8, 9, 10 and 12, $4.05; ⅝ x 10 and 12, $3.90. All other lengths 25c. extra net.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows: Bolts, carriage, ⅜ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅜ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½; hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS—Discounts are quoted as follows since the recent advance in the price of copper rivets: Iron, discounts, 60 and 10 p.c.; copper, No. 8, 37c.; copper, No. 10, 40c.; copper, No. 12, 43c.

COIL CHAIN.—Prices have been revised the general effect being an advance. Quotations now are: ¼ inch $7.00; 5-16, $5.35; ⅜, $4.75; 7-16, $4.50; ½, $4.25; 9-16, $4.20; ⅝, $4.25; ¾, $4.10.

SHOVELS—Discounts on spades and shovels continue 40 and 5 p.c.

HARVEST TOOLS — Discounts continue as before, 60 and 5 per cent.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES.—Quotations are: Bench axes, 40; broad axes, 25 p.c. dis. off list; Royal Oak, per dozen, $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $8.25; Columbian, $9.50; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.75; Copper King, $11 per dozen.

BUTTS—The discount on wrought iron butts is 70 p.c.

CHURNS — The discounts from list continue as before: 45 and 5 per cent.; but the list has been advanced and is now as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

CHISELS—Quoted at 70 p.c. off list prices.

AUGER BITS—Discount on "Irwin" bits is 47½ per cent., and on other lines 70 per cent.

BLOCKS—Discount on steel blocks is 35 p.c. off list prices; on wood, 55 p.c.

FITTINGS—Discounts continue as follows: Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

GRINDSTONES—As noted last week, the price is now 1½c. per lb., a decline of ¼c.

FORK HANDLES—The discount is 40 p.c. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 p.c. off list prices.

HOOKS—Prices are quoted as follows: Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

CLEVISES—Price is now 6½c. per lb.

STOVE PIPES—Quotations are as follows: 6-inch, per 100 feet length, $9; 7-inch, $9.75.

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discount is 50 per cent.

WASHERS—On small quantities the discount is 35 p.c.; on full boxes it is 40 p.c.

WRINGERS — Prices have been advanced $2 per dozen, and quotations are now as follows: Royal Canadian, $35.00; B.B., $39.75, per dozen.

FILES—Discounts are quoted as follows: Arcade, 75; Black Diamond, 60; Nicholson's, 62½ p.c.

BUILDING PAPER — Prices are as

Warehouses CALGARY EDMONTON WINNIPEG

Our sample books of **BAS-KA-NO**—(something new in wall hangings—standard colors) and **LIN-UNA** (a high-class colored tapestry burlap—all colors), sized and oil-coated burlaps will be out in a few days. We would like to mail you one of these. Send us your orders.

follows : Plain, Joliette, 40c. ; Cyclone, 55c. ; Anchor, 55c. ; pure fibre, 60c. ; tarred, Joliette, 65c. ; Cyclone, 80c. ; Anchor, 65c. ; pure fibre, 80c.

TINWARE, ETC.—Quoted as follows: Pressed, retinned, 70 and 10 ; pressed, plain, 75 and 2½ ; pieced, 30 ; japanned ware, 37½ ; enamelled ware, Famous, 50 ; Imperial, 50 and 10 ; Imperial, one coat, 60 ; Premier, 50 ; Colonial, 50 and 10 ; Royal, 60 ; Victoria, 45 ; white 45 ; Diamond, 50 ; Granite, 60 p.c.

GALVANIZED WARE. — The discount on pail is now 37½ per cent.; and on other galvanized lines the discount is 30 per cent.

CORDAGE—We quote: Rope, sisal, 7-16 and larger, basis, $11.25; Manila, 7-16 and larger, basis, $16.25 ; Lathyarn, $11.25 ; cotton rope, per lb., 21c.

SOLDER—Quoted at 27c. per pound. Block tin is quoted at 45c. per pound.

VISES — Prices are quoted as follows : "Peter Wright," 30 to 34, 14½c.; 35 to 39, 14c.; 48 and larger, 13½c. per lb.

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

CROWBARS—Quoted now at 4c. per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6. The "1904" sheep shearing machines are sold at $13.60.

AMMUNITION, ETC.—Quotations are as follows: Cartridges, Dominion R.F. 50 and 5 ; Dominion, C.F., 33½ C.F., pistol, p.c.; C.F., military, 10 p.c. advance. Loaded shells : Dominion Eley's and Kynoch's soft, 12 gauge, black, $16:50; chilled, 12 gauge, $17.50; soft, 10 gauge, $19.50; chilled, 10 gauge, $20.50. Shot, ordinary, per 100 lbs., $7.25; chilled, $7.75; powder, F.F., keg, Hamilton, $4.75 ; F.F.G., Dupont's, $5.

IRON AND STEEL.—Quotations are: Bar iron basis, $2.70. Swedish iron basis, $4.95; sleigh shoe steel, $2.75 ; spring steel, $3.25 ; machinery steel, $3.50 ; tool steel, Black Diamond, 100 lbs., $9.50 ; Jessop. $13.

SHEET ZINC — The price is now $8.50 for cask lots, and $9 for broken lots.

PIG LEAD—Quoted a $5.85 per cwt.

AXLE GREASE—"Mica" axle grease is quoted at $2.75 per case, and "Diamond" at $1.60.

IRON PIPE AND FITTINGS— Revised prices are as follows:—Black pipe, ¼ inch, $2.65; ⅜, $2.80; ½, $3.50; ¾, $4.40; 1, $6.35; 1¼, $8.65; 1½, $10.40; 2, 13.85; 2½, $19.00; 3, $25.00. Galvanized iron pipe, ⅜ inch. $3.75; ½, $4.35; ¾, $5.65; 1, $8.10; 1¼, $11.00; 1½, $13.25; 2, inch, $17.65. Nipples, discounts 70 and 10 per cent.; Unions, couplings, bushings and plugs, 60 per cent.

LEAD PIPE—The price, $7.80, is firmly maintained in view of the advancing lead market.

GALVANIZED IRON—Quoted as follows :—Apollo, 16 gauge, $3.90 ; 18 and 20, $4.10 ; 22 and 24, $4.45; 26, $4.40; 28, $4.65, 30 gauge or 10¾ oz., $4.95; Queen's Head, 24, $4.50; 26, $4.65; 28, $5.00.

TIN PLATES—We now quote as follows : IC charcoal, 20 x 28, box, $9.50; IX charcoal, 20 x 28, $11.50; XXI charcoal, 20 x 28, $13.50.

TERNE PLATES—Quoted at $9.

CANADA PLATES—Quoted as follows: Canada plate, 18 x 21, 18 x 24, $3.40; 20 x 28, $3.65; full polished, $4.15.

BLACK SHEETS—Prices are : 10 to 16 gauge, 100 lbs., $3.50; 18 to 22, $3.75; 24, $3.90; 26, $4; 28, $4.10.

PETROLEUM AND GASOLINE.—Silver Star in brls. per gal., 20c.; Sunlight in brls, per gal., 21c.; per case, $2.30; Eocene in brls, per gal., 23c.; per case, $2.50; Pennoline in brls., per gal., 24c.; Crystal Spray, 23c.; Silver Light, 21c.; Engine gasoline in barrels, per gal., 28c., f.o.b. Winnipeg in cases, $2.75

PAINTS, OILS & TURPENTINE — Turpentine is firm at the recent advance White lead, pure, $7; bladder putty in barrels, 2½c.; in kegs, 3¾c.; turpentine, barrel lots, Winnipeg, $1.01; Calgary, $1.08; Lethbridge, $1.08; Edmonton, $1.09. Less than barrel lots 5c. per gallon advance. Linseed oil, raw, Winnipeg, 64c.; Calgary, 71c.; Lethbridge, 71c.; Edmonton, 72c.; boiled oil, 3c. per gal. advance on these prices.

WINDOW GLASS—We quote : 16-oz. O.G., single, in 50-ft. boxes—16 to 25 united inches, $2.25; 26 to 40, $2.40; 16-oz. O.G., single, in 100-ft. cases — 16 to 25 united inches, $4; 26 to 40, $4.52; 41 to 50, $4.75; 50 to 60, $5.25; 61 to 70, $5.75. 21-oz. C.S., double, in 100-ft. cases—26 to 40 united inches, $7.35; 41 to 50, $8.40; 51 to 60, $9.45; 61 to 70, $10.50; 71 to 80, $11.55; 81 to 85, $12.60; 86 to 90, $14.75; 91 to 95, $17.30.

SUPERB EMPIRE

The Perfect Cooker

We draw the attention of the Western Trade to the Superb Empire Planished Steel Range. The oven door is not only braced but also spring balanced. A lever is attached to the front key-plate to raise it as desired, and contrived also to hold it up if necessary. The Superb throughout is substantial, its nickel dress alone making it a ready seller, besides, it is made by a Western stove factory for Western people only.

BEST OF REFERENCES

YEAR'S TRADE REVIEWED.

When Hardware and Metal's young man called upon George E. Davis, secretary-treasurer of Frothingham & Workman, wholesale hardware merchants of Montreal, he found him immersed in a mass of papers which he explained were the day's orders.

In reply to the questions as to the prospects of 1907, judging from the experience of the past year, Mr. Davis replied. "The end of this present prosperity does not yet seem to be in sight and with the swing trade now has there is no reason to anticipate a let up. Reports from all parts of the country are uniform as to the bountiful crops. Manufacturers also are busy and are using large quantities of goods and supplies in the hardware line. Collections have been easy during the past year, showing that money is circulating freely."

"How about prices ?"

"There has been a steady advance in prices, and this not alone in lines of hardware into which iron chiefly enters, but also handles, leather, and rope and such goods. During an advancing market there is generally less cutting of the prices and trade has in consequence, been very satisfactory. The most remarkable thing, however, to note in connection with advancing prices is that consumption has not apparently been checked. There seems no limit to the ability of the country to consume goods of all kinds. It has been very difficult to secure some lines of standard goods, more particularly in the iron line. During all the year it has been almost impossible for a jobber to complete his stock again once it was broken."

"Do you find help hard to obtain ?"

"Well, yes. There is more or less difficulty, we have several openings now. There's not much help of an intelligent class offering. This must be another result of the present prosperity, for boys are generally kept longer at school during good times. Hardware and metal does not seem to have much difficulty getting smart fellows," said Mr. Davis, as he shook hands and said good-bye.

BIG AMALGAMATION.

Although details are not yet available we can announce that arrangements are under way for the amalgamation or absorption of the Ontario Tack Company, Hamilton, by the Canada Screw Company, of the same city. The Ontario Tack Company recently purchased the wire nail machinery of the Ontario Lead and Wire Company, Toronto, and has a large interest in the Western Wire Nail Works, at London. The amalgamation of these interests with the Canada Screw Co., which has branches at Toronto, Vancouver and other places, is an important event in the hardware trade, and may help considerably in the movement now under way to bring wire nails back to the profitable prices ruling prior to the price cutting war of the past two years.

TRAVELERS TO MEET.

The Canadian Fairbanks Company's staff of salesmen covering the territory between Montreal and Vancouver will hold a convention in Toronto next week, the headquarters being at the firm's new building on Front street west. Trips of inspection will be made of the Canadian Fairbanks-Morse factory in Toronto, the Union Drawn Steel plant at Hamilton, the Bertram Works at Dundas, and other plants for which the company are sole selling agents.

McCLARY TRAVELERS CHANGES.

The McClary Manufacturing Company have made a number of changes in their staff, to take effect at the end of this year. George Clarke, who has been representing the firm in the western district, has been transferred to Hamilton, where he will be branch manager. Alexander Clarke, manager at Hamilton, will come to London, to be connected with the company's sales department. G. Smith, who has been traveling for the Montreal branch, has been transferred to London to cover the territory heretofore in charge of George Clarke.

WEST INDIAN TRADE.

Pickford & Back, Halifax, N.S., have offered to conduct four representatives from Canada to the British West Indies for the object of increasing Canadian trade there. J. D. Allen will represent the Toronto Board of Trade; A. E. Jones, Halifax Board of Trade; H. B. Schofield, St. John Board of Trade. Montreal has not yet elected its delegate. The party will go on January 15, and be away thirty-eight days. All Canadian manufacturers' catalogues will be taken care of by A. E. Jones, Halifax.

HARDWARE ASSOCIATION ITEMS.

Owing to the illness of his wife, E. P. Paulin, Goderich, was not able to attend the meeting of the Executive Committee in Toronto on Monday.

W. G. Scott, Mt. Forest, was also unable to attend, owing to his being a candidate for re-election as Water Commissioner of his town.

The members present were : President Humphries, Vice-President Hambly, Secretary Wrigley, Treasurer Caslor and Messrs. Brocklebank, Taylor and Peart.

J. Walton Peart, St. Mary's, leaves this month on an extended trip to the Southern States on account of his wife's health. Mrs. Peart is recovering from her recent attack of typhoid fever.

SEASON'S SKATE TRADE.

J. S. Bowbanks, Toronto, representative of the Starr Manufacturing Company of Halifax, N.S., states that the business done in 1906 showed a large increase on 1905. While a great many dealers had skates left over from 1905, it is evident that very little stock will be carried over this season. Mr. Bowbanks travels from Halifax to Vancouver, besides every two years taking a trip to the Old Country, he being the first to sell hockey skates and sticks in England and Scotland where Starr skates have obtained a firm foothold.

An increased business is looked for 1907.

A GOOD INCREASE.

Mr. Patterson, of the Patterson Manufacturing Company, Toronto, reports a very brisk year for their products, building paper, tar felt, wire edge, ready roofing, etc. The increase over 1905 was about 15 per cent., but he looks for a much larger increase for

SEASONABLE SUGGESTIONS.

Push ice-scrapers and snow-shovels this month but set a good example by keeping your sidewalks clear. Show that you believe in using the goods you sell.

THOS. DAVIDSON CO.'S BANQUET.

The 10th annual banquet tendered by the President and Directors of the Thos. Davidson Manufacturing Company, to their travellers, office staff, and heads of departments, on December 28, was thoroughly enjoyed by all the participants. The function was held in the club rooms provided for the employees, in the immediate vicinity of the factory.

Owing to the unavoidable absence of Mr. Jas. Davidson, the chair was taken by T. C. Davidson, the Vice-President. The first toast of the evening was "The King," which was right loyally honored. The toast to "Our Travellers," was then proposed by E. Goodwill, who referred to the enormous increase in Canadian trade during the last 25 years. W. H. Morgan, (Central Ontario), and Geo. Mather (B.C.), replied on behalf of the "Knights of the Grip." J. N. Young proposed the "Office Staff and Ware Room," which drew forth a very interesting reply from A. Bindley. W. J. White, K.C., proposed the "Winnipeg Branch," and was followed by J. Taylor Webb, the western manager, who spoke in his usual happy vein. The next toast was "Heads of Departments," proposed by T. C. Davidson, and replied to by Messrs. M. Lachapelle and Jos. Bodfish. The next toast was "The Ladies," proposed by C. D. Koppell, and replied to by T. R. Davidson, on behalf of the fair sex. The toast "Canada," was proposed by R. B. Gray, and replied to by H. B. Chadburn, both of these gentlemen representing parts of the Province of Ontario. After the health of the President and Directors had been enthusiastically drunk, the evening was brought to a close with the singing of the National Anthem.

Those who contributed with songs or recitations included Dr. W. A. Haldimand; Messrs. Jas. Chalmers, C. P. Clarke, A. O. Gee, H. Brisson, W. Johnston, J. O'Dowd, and W. E. Barrat. The item contributed by Jas. Chalmers, (who also designed the invitation cards and menus, which, as usual, were lithographed on tin), was particularly humorous, being an original poem with local hits, which was thoroughly enjoyed.

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

Forty Year's Growth.

The Sherwin-Williams Company, paint manufacturers, Montreal, have issued a pamphlet entitled "Forty Year's Growth," with miniature cuts of their plant in 1866, and of their various large concerns of the present day, including five large plants in Cleveland, Chicago, Montreal, Newark and London, Eng., also their offices and warehouses in fifteen principal cities, scattered from the Atlantic to Pacific Ocean, and from Winnipeg to the Gulf, which demonstrates the great growth of this firm in that space of time.

Novel Souvenir.

Dorken Bros. & Company, of Montreal, manufacturer's agents for H. Bokers & Company, Tree Brand cutlery, have issued a very acceptable little folder wishing the trade A Happy New Year. In the centre is a miniature sketch of the Alps, with a sample sprig of a small flower called "Edeliwiss," which is much sought after by Alpine travellers, and grows only in the Alps and Pyrenees, at a great allitude in situations difficult of access.

Standard Paint Catalogue.

The Standard Paint and Varnish Company of Windsor, are sending out a new catalogue of about 5 1-2 x 8 inches, containing 50 pages fully illustrated, with the products manufactured by them. On the front page are cuts of the present officers of this company, including Jas. A. Straith, President, and general manager; Albert Stolf, factory manager; D. B. Fisher, secretary and assistant manager, Wm. Richards, superintendent dry color department; Wm. Dietzel, superintendent vanish department. Also a cut of Ludger Gravel, the hustling manufacturers' agent, who represents the Standard Paint & Varnish Company in Montreal.

Homes, Healthful and Beautiful.

Under the above caption, the Alabastine Co., of Paris, Ontario, have put out, probably one of the handsomest booklets on home decoration ever issued in Canada. While designed primarily as a catalogue, the book is handsomely illustrated with numerous cuts of the interiors of rooms in colors, and, as well as containing complete information on wall decoration, is filled with many valuable suggestions both pictorial and otherwise on tasteful home furnishing. It is a book which needs only to be seen to be appreciated.

"Homes, Healthful and Beautiful," is gotten out in the form of an edition de luxe, and it is too expensive a book to distribute promiscuously to everyone who might write for it merely ly out of idle curiosity. The Alabastine Company are therefore making a charge of ten cents for it, which amount, while not nearly covering the cost of the book, is intended to discourage those who would write for it merely to gratify an idle whim. It is well worth reading. A copy will be mailed to any address on receipt of ten cents.

FIRE-PROOF GLASS WINDOWS

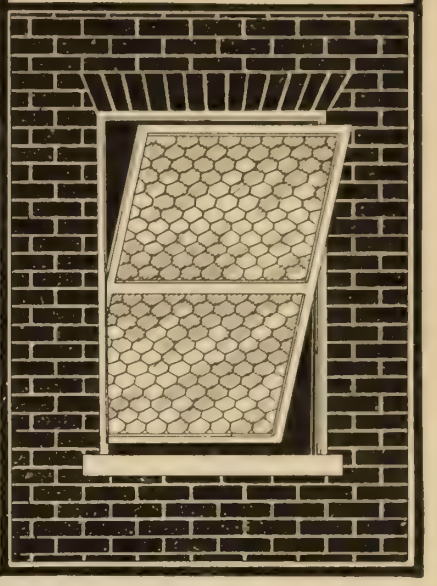
THAT ARE FIRE-PROOF

These windows in a fire-proof building, complete the security, and in any building will thoroughly prevent the spread and advancement of the fiercest flames.

Better than iron shutters (even if they happened to be closed at the needed time); fire-proof glass remains intact, resisting both the intense heat of the fire and the action of water.

Many practical tests have proved it's efficiency.

Used in conjunction with our hollow sheet-metal frames and other fire-proof fittings, it gives the most perfect protection available.



It's adoption lessens insurance rates.

If you want to know more about "fire-proof windows," write us, it's an interesting subject.

...THE...

Metallic Roofing Co., LIMITED,

TORONTO, Canada.

Western Canada Factory, 797 Notre Dame Ave., Winnipeg, Man.

Foundry Supplies.

The Catalogue of the Hamilton, Ont., Facing Mills Company, has been sent out to the trade. This catalogue is of 6 x 9 inches, containing 80 pages, fully illustrated, of their products of foundry supplies, including brushes, sieves, and moulders tools, bellows, shovels, crayons, also foundry facings, foundry equipments, graphite and plumbago. It will be found useful to hardware merchants, in ordering supplies.

Catchy Advertising.

The enterprising firm of James Reid, hardware, harness, wall paper and paint merchants of Perth, Ont., have supplied their customers with a handsome calendar, showing a young lady and a young man. The firm uses the following catchy bit of prose:

"A fellow loves a girl,
That's his business.
A girl loves a fellow,
That's her business.
They get married and need hardware,
That's our business.

Blacksmith's Supplies.

Ludger Gravel, agent for blacksmith's supplies, Montreal, has issued a handsome pastel of a blacksmith surrounded by his tools, and dressed in the regalia of his profession. This pastel is very attractive, and will be given a prominent place by any customer fortunate enough to receive a copy.

FOUNDRY AND METAL INDUSTRIES

The Stapway Iron, Bell and Wire Company, of Toronto, are considering the moving of their plant to Niagara Falls.

A British patent recently issued to M. Gruber of Berlin, Germany, for an aluminum solder, contains 60 parts of tin, 25 parts of zinc, 10 parts of copper, 5 parts of cadmium and 2 parts of aluminum.

The E. A. Pflueger Company, recently incorporated at Akron, Ohio, for the manufacture of fishing tackle and reels, will install a complete plating and polishing plant, and later will put in a brass foundry.

The Percival Plow and Stove Company have organized at Merrickville with the following officers: J. B. Waddell, President; R. C. Percival, Vice-President; E. W. Stickney, managing director and G. S. Seeber, Secretary-Treasurer.

The International Acheson Graphite Company of Niagara Falls, N.Y., are now manufacturing a soft artificial graphite which may be used for electrotyping, lubrication and stove polish. A new discovery by E. G. Acheson has made this possible.

The Nova Scotia Steel Company during November shipped from North Sydney 69,304 tons of coal, or an increase over the same period last year of 10,195 tons. For the 11 months up to November 30, 612,020 tons have been shipped, as against 487,500 tons, or an increase over last year's shipments of 124,453.

A despatch from Glace Bay says: Everything now indicates that the fire in the Hub colliery is out. The temperature of the mine at the bottom of the main shaft is under 100 degrees, and at two other places only 40 and 60 degrees. The Dominion Coal Company are determined to be on the safe side, however, and the Atlantic will continue to pour into the mine for several days. Several powerful pumps have been ordered, and are now on the way to Glace Bay. As soon as they arrive the company will start to pump the mine out.

Start the year right.

If you have never handled paint start 1907 right by establishing a paint department in your store. The opportunities for profitable paint business are so good that no dealer should neglect this source of splendid revenue.

If you have never handled *SHERWIN-WILLIAMS PAINTS AND VARNISHES*, start right by becoming a Sherwin-Williams Agent. You do not know the paint possibilities before you until you have handled this line. With the S-W. prestige, quality and reputation behind you, and our co-operation with you in getting business you make sales where you did not suppose sales could be made. The S-W. selling methods and advertising helps are strong and effective and are a surprise to the new agent who has never experienced such efforts to create business for him.

Write today for our agency proposition.

MAKING SOLDERING FLUX.

Chloride of zinc is very extensively used as a flux in soft soldering. It is an excellent one, too, and nothing has yet been found to take its place. It also has the advantage of cheapness. The action of chloride of zinc in soldering is based upon the fact that it dissolves the oxides of tin and lead upon the solder, and produces a clean surface for uniting with the metal to be soldered.

The mistake that is frequently made in making soldering flux is to add water. The stronger the flux can be made, and still remain in the liquid condition, the better it will be. As it is the chloride of zinc that does the work, the presence of water is a detriment. The water also has the advantage of producing spattering. The action of a weak flux in cleaning the surface of the molten solder is far inferior to that of a strong solution. In order to produce the best results, the flux should be made by dissolving zinc in strong muriatic acid until it will take up no more.

VALUE OF BABBITT METAL.

Babbitt metal is a composition that is used extensively as a substitute for brass in the lining of journal bearings, says the Valve World. To make such a bearing, the shaft for which it is required is placed in position in its recess or cavtiy, and then the melted babbitt metal is poured in around it and allowed to cool, thus forming the bearing for the shaft. The value of babbitt metal for this purpose lies in the fact that it has all the merits of brass as a wearing material, and at the same time melts at a much lower temperature; and also being of a very fluid nature when melted, it may be poured into the cavities around the shaft and the expensive operation of fitting brass to these places thus be dispensed with. What is called the "genuine," or superior babbitt metal is described under the heading of Tin Alloys. But there are a variety of cheaper grades of this material, in which lead is very extensively used alloyed with antimony, or with antimony and tin. While these compositions are not so good as the "genuine," they are of sufficient merit for a large variety of cheap machinery, and are extensively used in the repairing of agricultural implements, and other grades of cheap machinery. An immense quantity of the combination of lead and antimony is produced by the silver smelters, a market for which is found in the production of babbitt metal.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

A tannery is being established at Sydney, N.S.

The Red River Metal Company will erect a large warehouse in Winnipeg, to cost $12,000.

The building returns of Calgary and suburbs, for the year 1906, will be in the vicinity of $3,000,000.

The building permits issued in Vancouver for 1906, total $4,084,840, which is more than double those of two years ago.

Gordon Mackay & Company, of Toronto, have been issued a permit for the erection of their new factory at a cost of $60,000.

F. C. Filer, of the Northern Electric & Manufacturing Company, of Montreal, is establishing a branch of his company in Winnipeg.

The Burlington Masonic Hall Company, has been incorporated with a share capital of $10,000 for the erection of a hall for the Burlington Masonic Lodge.

The sum of $600,000 has been subscribed in Quebec for the starting of a cement industry. The land has been purchased, and works will be started immediately.

The contract for erecting the Meisel Manufacturing Company's new plant at Port Arthur has been awarded and work will be commenced on the buildings at once.

Another industry has been located at Welland, by John A Reeb, of Port Colborne, and W. J. Sommervile of Welland, who will manufacture wood fibre wall plaster, and cement tile.

A new $100,000 hotel is to be built at St. Johns, Newfoundland. All the stock is held by Newfoundland parties, excepting two Canadian commercial men, Messrs. R. Taylor, of Halifax, and L. Garneau, of Quebec.

The Great Northern Railway has announced a new freight tariff, effective December 27, making voluntary reduction in rates from the south to Winnipeg, Portage la Prairie, Brandon, Prince Albert and Edmonton.

The Winnipeg Foundry Company, has been incorporated with a $20,000 capital; provisional directors: J. T. Hill, machinist; H. Bell, machinist; W. A. Armstrong, agent; A. D. Irish, agent; A. J. Brown, agent, and F. W. Irish, manager, all of Winnipeg.

The Well Machine and Wind Mill Company, has been incorporated with $20,000 capital; provisional directors: C. S. Tyrrell, merchant; J. H. Inkster, agent; H. W. Hutchinson, manager; W. S. Evans, financial agent; J. A. Machray, barrister-at-law, all of Winnipeg.

Montreal shows a large increase in the number of buildings erected, also total value. Permits for new buildings in 1906 are 1,484, as compared with 1,145 for 1905. The value of buildings for 1906 is $7,745,023, compared with $4,779,380, for 1905, an increase of $2,965,643.

Bechtels, Limited, has been incorporated with a share capital of $75,000, for the purpose of manufacturing brick, tile blocks, and cement products. The head office will be at Waterloo, and provisional directors will be: B. E. Bechtel, W. B. Bechtel, W. J. Watson, C. E. Whyard of Waterloo; C. H. Bechtel, of Berlin, and P. A. Watson, of Galt.

The Sydney Cement Company have decided to enlarge their plant, which is situated on ground leased by them from the Dominion Iron & Steel Company, between two railroads, a position of considerable advantage for deliveries of raw material and for shipment of its products. The cement is made from slag which is procured from the blast furnaces of the Dominion Iron & Steel Company.

The first gypsum plaster ever made in Winnipeg, was turned out last week, by the Manitoba Gypsum Company, at their new works. The company first built works on Lake Manitoba, they were burnt down in July last, and it was decided to erect a new factory at Winnipeg, and to take the rock there for treatment. About 70 hands are now employed, and work will continue all the year round.

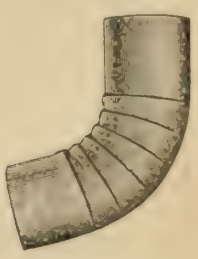
The Ontario Wind Engine & Pump Company, shipped, on December 26, a consignment of 15 Airmotor Outfits to Egypt. This follows other large shipments made last summer and fall, and these shipments speak louder than words of the popularity of these Canadian manufacturers in the Levant. It also emphasizes the wisdom of maintaining a reasonable protected tariff to enable Canadian manufacturers to build up not only a home business, but also an export business, for if the manufacturers of this country are not protected they neither can manufacture for the home trade nor for export. The Canadian Airmotors now to be seen in Cyprus, Egypt, Africa, and other distant parts of the world are the best testimony to Canadian Statesmanship.

In Toronto, during 1906, the building permits issued represented the sum of

$13,152,000. Last year the amount was $10,370,000. Application for the construction of several large buildings have recently been received, but the permits have not been issued. Among these are the Public Library and the Dominion Radiator Company's works. The former is $242,000 and the latter $500,000. These, if issued, would bring the amount up to $13,894,000. The number of permits issued during the year was 3,438 and the buildings erected 4,709. Following is a list of the permits issued during the past ten years: 1896, $657,168; 1897, $947,611; 1898, $1,701,630; 1899, $2,010,446; 1900, $1,903,136; 1901, $3,568,883; 1902, $3,854,923; 1903, $4,356,457; 1904, $5,896,120; 1905, $10,370,000.

Galt has given substantial evidence in the way of growth by the erection of 112 dwelling houses. The manufacturing part of the town, has also shown a decided increase, some new firms starting, and a number of old ones adding considerable floor space, 314,710 square feet being added to 15 enterprises, divided viz.: Galt Knitting Company, 87,500 square feet; MacGregor, Gourlay Company, 84,845 square feet; Malleable Iron Company, 36,991 square feet; P. W. Gardiner & Son, 22,400 square feet; Sheldons, Limited, 21,000 square feet; R. McDougall Company, 13,200 square feet; Galt Robe Company, 10,360 square feet; Cowan & Company, 10,230 square feet; McVicker Engine Company, 9,548 square feet; Box Factory, 4,950 square feet; J. J. Stevens Company, 4,100 square feet; Victoria Wheel Works, 3,600 square feet; Peter Hay Knife, 1,600 square feet. The total amount of money expended for building purposes in Galt in 1906, was $560,000.

A well organized and energetic movement is on foot in the Maritime Provinces to build up the steel shipbuilding industry. A statement summing up the argument in favor of a tonnage bonus on steel ships built in Canada was lately submitted to the Tariff Commission, and the Dominion Government has been memorialized to grant such a bonus on a basis of $6 per gross ton. The Boards of Trades and municipal councils of Halifax, Dartmouth and other places have taken the matter up, and much interest is felt regarding the manner in which the request for a bonus will be treated at Ottawa. Years ago in Eastern Canada, shipbuilding assumed very large proportions, but with the advent of steel construction it rapidly declined. Steel vessels can be built cheaper in British yards on account of the cheaper iron, coal, and labor there Those who agitate for a bonus on steel ships point out that all maritime nations give protection to their shipping. There is an increasing demand in Canada for steel vessels for both coastwise and lake trade, but it is claimed that Canadian yards cannot compete with British and foreign builders in this line of construction. It is pointed out that Canadian built tonnage has decreased in less than 30 years from 183,000 to 33,000, while the entries in and out from sea have increased from six to sixteen millions, the coastwise shipping from ten to forty-five millions, and the Great Lakes tonnage has more than doubled. There are now in Canada, besides several smaller firms, four large steel shipbuilding companies the Algoma Steel Company, Sault Ste. Marie; the Canadian Iron Furnace Company, Montreal; the Collingwood Shipbuilding Company, Collingwood; and the Canadian Shipbuilding Company, Toronto. These yards are not all fully and steadily employed, and it is suggested that while many millions of dollars are being expended in Canada in nearly every industry, including iron and steel, it is time we should build our own ships and do our own carrying trade.



THE TALLEST BUILDING.

Contracts have been awarded for the erection in New York City of what will be the tallest building in the world. This is the proposed new Singer building on Broadway, north of Liberty Street. It will require for the work 6,000 tons of structural steel. The building will have thirty-six regular floors, on top of which will be a dome including four floors, the fortieth floor being 550 feet above the curb. This is a part of the transformation of a city into an abode of cliff-dwellers. The building will be 625 feet high, the tallest skyscraper in the city, and will have wind anchors so that it may be firmly braced against every gale. The wind pressure, on account of the structure's great altitude, will be tremendous, and for that reason the building is to be literally tied to its foundations by an ingenious arrangement of steel rods. They will be three and a half inches in diameter, and descend for nearly fifty feet into the concrete which forms the caissons resting on solid rock eighty-five feet below the curb. The lowest rod has on the end of it a great anchor plate to which it is secured.

LATEST CANADIAN PATENTS.

The following up-to-date list of Canadian patents is reported to us by Egerton R. Case, Solicitor of Patents, Temple Building, Toronto.

Rob. A. Armstrong, Avenmore, Ont., ploughs. Richard H. Castle, Toronto, Ont., oven doors and lamp receptacles therefor. Wm. Hull, Souris, Man., attachments to cultivators. Jas. Wm. McDonald, Winnipeg, nut locks. Frank L. Armstrong, Moose Jaw, Sask., scrapers on disc plows. Wm. Maloney, Smith's Falls, combined cutting knives and distributors for adjusting means for harvester frames. Wm. Maloney, Sherbrooke, threshing harvesters. Harrison C. Frost, Montreal, rubber hose. Wm. F. Kendall, Grimsby, Ont., step ladders. Arthur P. Couture, Winnipeg, window hinges. Alex. Dobson, Beaverton, shockers. Jos. S. Nesbitt, Victoria, B.C., flash signs.

SYSTEM IN FINDING FOUNDRY COSTS.

By D. C. Eggleston.

Notwithstanding the advance made in finding costs of production during the last few years it is generally true that [illegible] it is generally true that the iron foundry has been neglected. While the attention of cost system experts has been directed toward the iron foundry the tendency has been to try and adapt systems used in other departments. However, the work of the iron foundry is so different in nature from that of other departments that a radical departure must be made from the methods elsewhere employed.

In any iron foundry an analysis of the expense shows that it is incurred in connection with the cupola and several classes of work. The output of the former is in pounds of metal and of the latter in hours of labor. This suggests that the entire cupola expense should be prorated according to the number of pounds of castings produced and the expense against other classes of work on the basis of man hours worked.

This method requires a division of expense between the cupola and other classes of work. In most cases no difficulty need be experienced in doing this; coke, fire-brick, ladles, lime stone, wood and some water are chargeable to cupola expense. The time of the foremen and foremen's clerks should be divided between cupola and other divisions of expense by estimate of the time spent on coke, pig iron, charging sheet and output reports. The administration expense not chargeable to the cupola should be distributed to other classes of work on the basis of the number of man hours in each. The rent expense includes all charges on account of grounds, buildings, heating, lighting and fire service. This division of expense is distributed on the basis of the number of square feet of floor space occupied by each class of work. Power expense should be distributed by estimate to the various classes of work.

The foundry clerk should keep a card file on which he records tools such as wheels and sieves received, given out (noting to which class of work), and the number on hand. Reference to the file facilitates the distribution of supplies. There are often some items concerning which there is doubt as to just which division of work they should be assessed. In such cases it is necessary to consult the foundry foreman that as accurate a division may be made as possible.

It is the best practice to assign letters indicative of the various rates of expense on the different classes of labor. Thus I. F. A. may be used to denote the rate on core work; I. F. B. on crane moulding, and so on. The foreman's clerk notes the proper letters on the workman's time ticket so that the expense can be added simultaneously with the productive labor to the cost of the hob. To the cost of metal the rate per pound for cupola expense can be added, thus giving the indirect expense incurred in connection with the cupola. The sum of productive labor, labor expense, raw material and cupola expense gives the total cost of producing the castings on an order.

In the statement of shop deliveries the productive labor, raw material and expense accounts should be credited and piece parts account is credited and the the casting is used on an order the the piece parts account debited. When proper account debited. Thus the cost system herewith described not only gives accurate costs of production, but also facilitates in keeping a check on the work of the iron foundry. If it is desired to cut down expense a study of the exhibit of iron foundry figures will suggest valuable economies. Comparative figures aid in showing wherein the increase or decrease lies. That the system herein described has been evolved to meet the requirements of the iron foundry in a large manufacturing works where it is in successful operation, recommends it to the attention of iron foundrymen.—Iron Age.

A NOVEL SHAVING MIRROR.

The latest good thing from the ingenious shops of the General Specialty Manufacturing Company, of Philadelphia, is the adjustable shaving and toilet mirror called the "Tipso." This Tipso mirror strikes the average person as just the handiest thing of its kind ever put out.

It is an oval mirror of French plate, bevelled and handsomely mounted in metal. It can be adjusted, by a touch, in any direction, at any angle, so as always to get the best light on the face.

"Tipso" Shaving Mirror.

Each mirror has a heavy ball fixture for screwing into the window frame or woodwork frame near any convenient light, day or night. Stands are provided also for use in dressing tables, supporting the mirror at various heights, a toilet accessory greatly appreciated by women. For household use or traveling, the Tipso mirror meets a widely felt want and already it is finding a very large sale.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (as $1,000) are allowed as one word.

Cash remittances to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

Where replies come to our care to be forwarded, five cents must be added to cost to cover postage, etc.

SITUATIONS VACANT.

WANTED - An experienced hardwareman at once; write with references and state salary expected to Box 273, Tilsonburg, Ont. [tf]

WANTED an assistant to editor of Hardware and Metal in Montreal — Young man preferred who has had some experience with the hardware or metal trades; Excellent opportunity for advancement; state experience and salary expected; all applications treated confidentially. Address, Manager, HARDWARE AND METAL, Montreal.

TRAVELLER WANTED

TO sell a line of established successful coal heaters, also wood heaters, on commission; must cover territory twice or oftener, say once between January and April and again between May and August; state lines now carried and territory covered; liberal commission given; Box 573, HARDWARE AND METAL, Toronto. [1]

BUSINESS CHANCES.

STOVES—An established, successful working line of patent coal, also wood heaters, for sale; including patent, patterns, materials and some completed stoves; also machinery and dies, if wanted; will go with a line of heaters or ranges, or to sell with some hardware specialty; proprietor has other pressing interests. Address Box 574, HARDWARE AND METAL, Toronto. [1]

WANTED
by January 1st, 1907,
Glass Salesman

Must be experienced and reliable, state references and qualifications, also amount of salary required. Apply only by letter to

Consolidated Plate Glass Co., Limited
Toronto, Canada. (52)

Are you interested in any of the lines that are advertised?
A Post Card will bring you price list and full information.
Don't forget to mention Hardware and Metal.

To Manufacturers' Agents

HARDWARE AND METAL has inquiries from time to time from manufacturers and others wanting representatives in the leading business centres here and abroad.

Firms or individuals open for agencies in Canada or abroad may have their names and addresses placed on a special list kept for the information of inquirers in our various offices throughout Canada and in Great Britain without charge.

Hardware Dealers Should Wake Up—

to the fact that **SHEET METAL BUILDING GOODS** could be made a large and ever increasing factor in their business. Farmers, manufacturers and all owners and builders are daily demanding these goods because they fill satisfactorily the gap which is being left by the diminishing supply of good and cheap timber. Some dealers have already established a considerable trade in this line, proving that it can be done, but it's "only as a drop in the bucket" compared to what's to come. If the **HARDWARE DEALERS** and **TINSMITHS** don't look after this valuable trade, they will live to regret it. **Some one else will reap the harvest.**

Don't say—"**There's nothing in it for me**"—because there certainly is, providing you have the **RIGHT GOODS** and the **RIGHT FIRM** behind them. It doesn't matter about the manufacturers who sell direct to the consumer. One good, square firm, who will **PROTECT** and **HELP** a good orginization of agents, can, with those agents, do more business than three or four of the other kind.

We can show you—all we need to prove to you how this combination will work in 1907 is some more good agents—we've got the goods and the other qualifications. One of our representatives will be along your way soon after New Years to talk to you on the subject. If you are interested drop us a line at once and make certain that you will not be missed.

Paint, Oil and Brush Trades

THE SHORTAGE OF GASOLINE.

"Far reaching are the economic effects of the rising price of gasoline," says the Boston Transcript. "For thousands of scattered factories the power is to-day furnished by gasoline engines, which operate on the explosion principle, made popularly familiar by the operations of the automobile. But the rising price of gasoline is so seriously interfering with the growth, if not the maintenance, of this form of power supply that engine manufacturers are now experimenting on an extensive scale with the less costly distillates in the hope of getting a suitable substitute. It is against this commercial use of gasoline that the present prices will have their first effect. But other of its uses will be affected if its price mounts much higher, notably the development of the autotruck. But for the prospect of diverting some of the demand for gasoline to the other distillates of crude oil, and the likelihood that denatured alcohol will relieve the situation somewhat, gasoline would already have gone much higher than now. The quality of the gasoline is also affected, since it is believed that to-day a proportion of Texas crude oil is often mixed with that from the Pennsylvania wells to make the latter 'go further,' before the process of refining begins. The result is that greater residuum of mineral matter, of which automobilists and others are now complaining.

"America's production of gasoline is apparently not on the increase, although this country's output of crude oil has been steadily, if not sensationally, increasing in volume, and is now larger than ever before. This contrast is due to the character of the Texas and California oil fields, both of which yield a small percentage of gasoline, and also of all other grades of lighter oils. The best fields of these are in Pennsylvania. But that state is not maintaining its proportions of the total supply, and as a result gasoline is falling relatively behind.

"From the oil as it goes through a process of refinement, the first vapors which condense into liquid form are the naphthas, gasoline and kerosene in that order; then come the neutral, or solar, oils which are sold to the gas companies to make the illuminant of our cities. Then follow the lubricating distilates, and finally those heavy oils used in cylinders. In the Pennsylvania field from 60 to 70 per cent. of the oil is turned into kerosene or lighter distillates, while in Texas less than 20 per cent. is thus available. This tells the story. Within the memory of the present generation gasoline sold for 6 or 7 cents a gallon, because the demand at that end of the line was so small. It now retails at about 20 cents. Certain industries, notably the automobile and the power engine run by gasoline, have so focused demand on it that it is sure to increase greatly in price unless relieved by alternative products. It is hoped that by a display of ingenuity the solar oils can yet be used in the factory engines.

"Kerosene, which is still going up in price, although less in proportion than gasoline, is the great illuminant of the world, not only in the rural regions of America, but in all continents, down to the very grade of life which regards artificial light as not worth having. It is a curious fact that the increase in electric-lighting plants apparently increases the demand for kerasene oil, too, often in the very towns where electric works are operated, people accustom themselves to certain degrees of light, forming habits in that regard which, like popular demands in heating and other things, show themselves all along the line. Gas and electric lighting have created a popular taste for more light, and this in turn affects those who depend on kerosene for their illumination.

"The troubles in Russia have greatly affected the situation in Europe to-day, so that it has been obliged to import large quantities of Texas product, although a few years ago it was with great difficulty that the Texas lubricating oils found any market there. There is a tremendous demand for them now, and one that it is almost impossible adequately to meet. The world might well wonder how it will get along for lubrication of its countless machines, as well as for light, when the stored supply of mineral oils have been exhausted, but for experience with similar worries before. The old lady who expected to have to sit in darkness when all the whales had been driven from the seas expressed a fear which has found many forms. President Dwight, of Yale College, in his celebrated 'Travels,' written a century ago, regarded the outlook of New York state for growth in population and business, limited only by its fuel supplies. He did not think enough

wood could be grown there to provide for more than about so many people. Although he visited Niagara he never looked upon it as a substitute for the growing forests.

"Some of the oldest of the Pennsylvania wells are still producing oil, although not so much as formerly. But new regions are constantly discovered, so that the present generation need not worry. The economic price will keep an effective check valve on consumption, lest it run away from supply, just as it is now sending inventors into experimental engines, which may utilize the lower-grade oils."

As the White Lead is So is the Paint

The only white lead used in

"Anchor" and "English"
LIQUID HOUSE PAINTS

is Brandram's B.B. Genuine.

Brandram's
B. B. GENUINE

has been the world's standard **white lead** for close on to two centuries.

Montreal, January 4, 1907.

Stock-taking is the order. Some travelers have started out and others are waiting until normal conditions are resumed after the holidays.

Paris Green is being freely advertised this week as usual and prices are normal for the season.

Turpentine and linseed oil remain firm and white lead is firm at the advance of three weeks ago.

LINSEED OIL—We continue to quote: Raw, 1 to 4 barrels, 55c; 5 to 9 barrels, 54c.; boiled, 1 to 4 barrels, 58c.; 5 to 9 barrels, 57c.

TURPENTINE.— We are now quoting: Single barrel, 96c. per gal.; two barrels or over, 95c per gal.; for smaller quantities than barrels, 5c. extra per gal. is charged Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

GROUND WHITE LEAD.—The recent advance is being rigidly maintained and grinders have no trouble in getting the following prices: Best brands Government Standard, $7.25 to $7.50; No. 1, $6.90 to $7.15; No. 2. $6.55 to $6.90; No. 3, $6.30 to $6.55 all f.o.b., Montreal.

DRY WHITE ZINC.—We still quote as follows: V.M. Red Seal, 7½c to 8c; Red Seal, 7c to 8c; French V.M., 6c to 7c; Lehigh, 5c to 6c.

WHITE ZINC (ground in oil)—Manufacturers have raised their prices, and we now quote: Pure, 8½c to 9½c.; No. 1, 7c. to 8c.; No. 2, 5¾c. to 6¾c.

PUTTY—A heavy demand is shown. We quote prices: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladder putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows: Casks, 8c.; 100-lb. kegs, 8½c.

RED LEAD—The following quotations are firm: Genuine red lead in casks, $6.00; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs $6, and smaller quantities, $6.75.

PARIS GREEN—Prices are as follows: In barrels, about 600 pounds, 23½c. per lb.; in arsenic kegs, 250 lbs., 23½c.; in 50 lb. drums, 24c.; in 25 lb. drums, 24½c.; in 1-lb. packets, 100 lbs. in case, 25c.; in 1 lb packets, 50 lbs in case, 25½c.; in ½ lb. packets, 100 lbs in case, 27c.; in 1 lb. tins, 26c. f.o.b. Montreal. Term three months net or 2 per cent. 30 days.

SHELLAC—Quotations are as follows: Bleached, in bars or ground, 46c per lb., f.o.b. Eastern Canadian points, Pale Dry, 57c per lb., f.o.b. Eastern Canadian points; T.N. Orange, etc., 48c per lb. f.o.b. New York.

SHELLAC VARNISH—The prices are: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—We still quote as follows: Firsts in cases, 8½c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c

BENZINE—We still quote 25 cents in barrels, and 30 cents in smaller quantities.

WINDOW GLASS—Our prices are: First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.20; second break, 100 feet, $3.40; third break, 100 feet, $3.95; fourth break, 100 feet, $4.15; fifth break, 100 feet, $4.40; sixth break, 100 feet, $4.95. Diamond Star: First break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second break, $4.80; third break, 100 feet, $5.75; fourth break, 100 feet, $6.50; fifth break, 100 feet, $7.50; sixth break, 100 feet, $7.50; seventh break, 100 feet, $8; eighth break, 100 feet, $9. Double Diamond: First break, 50 feet, $3.45; second break, 50 feet, $3.75; first break, 100 feet, $6.75; second break, 100 feet, $7.25; third break, 100 feet, $8.75; fourth break, 100 feet, $10; fifth break, 100 feet, $11.50; sixth break, 100 feet, $12.50; seventh break, 100 feet, $14; eighth break, 100 feet, $16.50; ninth break, 100 feet, $18; tenth break, 100 feet, $20; eleventh break, 100 feet, $24; twelfth break, 100 feet, $28.50. Discount on Diamond Star, 20 per cent.; on Double Diamond, 40 per cent.

TORONTO.

Office of Hardware and Metal,
10 Front Street East.
Toronto, January 4, 1907

The paint and oil markets remain unchanged, but another increase is looked for in lead and turpentine.

Travelers have again resumed their work on the road, and report an increased demand for paints, etc. Retail merchants will do well to order now, as the large demand will no doubt cause a shortage.

WHITE LEAD—Ex Toronto pure white, $7.40; No. 1, $6.65; No. 2, $6.25; No. 3, $5.90; No. 4, $5.65 in packages of 25 pounds and upwards; 1-2c per pound extra will be charged for 12 1-2 pound packages; genuine dry white lead in casks, $7.00.

RED LEAD—Genuine in casks of 500 lbs., $6.00; ditto, in kegs of 100 lbs., $6.50; No. 1 in casks of 500 lbs., $5.75; ditto, in kegs of 100 lbs., $6.25.

DRY WHITE ZINC— In casks, 7 1-2c.; in 100 lbs., 8c., No. 1, in casks 6 1-2c., in 100 lbs., 7c.

WHITE ZINC (ground in oil)—In 25-lb. irons, 8c.; in 12 1-2 lbs., 8 1-2c.

SHINGLE STAIN—In 5-gallon lots, 75c. to 80c. per gallon.

PARIS WHITE—90c. in barrels to $1.25 per 100 lbs.

WHITING—60c. per 100 lbs. in barrels; Gilders' bolted whiting, 90c. in barrels, $1.15 in smaller quantities.

SHELLAC VARNISH - Pure orange in barrels, $2.70; white, $2.82 1-2 per barrel; No. 1 (orange) $2.50; gum shellac, bone dry, 63c., Toronto. T. N. (orange) 51c. net Toronto.

LINSEED OIL—We still quote: Raw, 1 to 4 barrels, 57c.; 5 to 9 barrels, 57c.; boiled, 1 to 4 barrels, 60c.; 5 to 9 barrels, 59c. Toronto, Hamilton, London and Guelph; net 30 days. Advance of 2c. for delivery to outside points.

TURPENTINE—Single barrels, 97c.; 2 to 4 barrels, 96c.; f.o.b. point of shipment, net 30 days. Less than barrels, $1.02 per gallon.

GLUES—French Medal, 12 1-2c. per pound; domestic shee , 10 1-2c. per lb.

PUTTY—Ordinary, 800 casks, $1.50; 100 drums, $1.75, barrels or bladders, $1.75; 100-lb. cases, $1.90;; 25-lb. irons, $1.85; 25-lb. tins (4 to case) $1.90; 12 ½ lb. tins (8 to case) $2.10.

LIQUID PAINTS—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

BARN PAINTS—Gals., 70c. to 80c.

BRIDGE PAINTS—Gals., 75c. to $1.

CASTOR OIL—English, in cases, 9 1-2c. to 10c. per lb., and 11c. for single tins.

PARIS GREEN—Canadian manufacturers are quoting their base price at 25c and on the English, 25¾ is quoted f.o.b., Toronto.

REFINED PETROLEUM — Dealers are stocking up heavily for the Winter. We still quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM — We quote: Canadian, $1.32; Pennsylvania, $1.58; Ohio, 96c.

SAVE OIL FIELDS FROM TRUST.

If the finds of oil on the Manitoulin Islands are as great as reported, the discovery is of immense importance, or, rather, can be made so if the product can be protected by Government from falling into the maw of the Standard combine, says the Montreal Witness.

Contemporaneous with this discovery is the action of the United States Government, which is taking measures in the South-West for the purpose of preventing discrimination and making the oil trade open to all producers. For this purpose a concession has been granted to the Mellen Company of Pittsburg to erect over reservation lands a pipe from Bartlesville, Indian Territory to points in Texas, with a view to affording an outlet through Gulf ports to the product of the Indian Territory and Oklahoma field.

The officials of the Department of the Interior believe that the independence of operators in the South-Western field is thus secured. Under the government regulations, it will be impossible for the proposed pipe line, which is estimated to cost eight million dollars, ever to fall into the hands of the Standard or any other oil monopoly. The regulations prepared by the Department are hard and fast, and give the Secretary of the Interior authority to cancel on ten days' notice the contract of any individual or company in the event that the terms of the contract are violated. There is precedent and practice for our Government to follow in the case of the Manitoulin oil wells.

A barrel of crude petroleum containing about forty-three gallons, can be delivered on board ship for the trifle of ten cents, but when it has passed through the hands of the Standard Oil combine, and has gone through a comparatively inexpensive refining process, twenty-five cents a gallon is charged for it. That would be profit with a vengeance. The ten cents would be changed into nearly eleven dollars net. As the oil on the Manitoulin Islands is said to be of such good quality that it would yield a splendid profit even if sold at ten cents a gallon, the Government should do its utmost to secure to the public such a boon.

PLEASE THE WOMEN.

Please a woman with a household novelty and ten to one she will succeed in using it for a variety of things the manufacturer never dreamed of, excepting when he had the nightmare, says Hardware. Disappoint her and the chances are she never afterwards can find a hammer in the whole concern good enough to drive a carpet tack. That isn't the worst of it. She will tell her family so convincingly how she has been swindled that not a member of it will ever trade at such a place again; they would not dare to, lest she find it out.

A man will get outrageously cheated and then will say nothing, but grin sardonically while all of his fellows go in and do likewise. A woman will drag them back by force and call the police if they insist on entering. Perhaps the man may even be cajolled and made to believe that he was not hurt very much; at least that he has been a victim of circumstance rather than of fraud; anyway he wants to go back just to see if it can be done to him again. Swindle a woman and all the apologies in the world won't quiet her. She is after the goods and not excuses. Either she is suited, and all sweet words, or else she isn't and is all words that are not so sweet, and there it ends—only, something else begins.

Certainly it pays to please the women. No other class of customers are more liberal or more loyal; none others half so influential as they in favor of their commercial friends. But an offended woman will get even seven times over if she has to wait ten years to do it, and in the meantime is compelled to organize a special social club or sewing society to accomplish her revenge.

BERRY BROTHER'S VARNISHES

Money in Your Pocket

The difference between supplying good reliable paint and selling paint of an inferior quality, is **Money in Your Pocket.** You can only sell bad paint to an intelligent man once. He makes no fuss—but he goes to the store that sells

Ark Brand Paint

the next time he wants paint. You can't blame him—can you? He's simply out for the best his money can buy—a paint as near perfection as can be. Money can't buy a more enduring paint than Ark Brand, and that's the kind of paint which builds up a thriving business you'll admit.

MURESCO WALL FINISH

delights the man who applies it, and gives more satisfaction to customers than any other placed on the market.

THE BENJAMIN MOORE CO., LIMITED
FORMERLY THE FRANCIS FROST CO., LIMITED

New York TORONTO, CANADA Chicago

OUR NAME

on a can of Paint or Varnish means that we guarantee its good quality. The name "Sterling" corresponds with the Sterling stamp on silverware—GENUINE—THE BEST.

A storekeeper is to be judged by the quality of the goods he handles.

The best storekeepers sell "Sterling" goods.

Do YOU sell "Sterling" Paint?

There is no better or more satisfactory paint made, and one dealer in your town is going to have the reputation of selling The Best Paint. Our representative will call upon you in a few days to offer a good proposition, which means so much to you that you cannot afford to turn it down. Kindly defer placing your Spring order until he has seen you.

THE HOUSEKEEPER'S DREAM.

I dreamt that I dwelt in Alabastined halls,
Alabastined ceilings, Alabastined walls,
Where the fairies love to congregate and meet
The air is so etherial, pure and sweet.

Cupids and fairies will visit you at night
In rooms, Alabastined beautiful and bright,
From kalsomines or wall papers tainted with decay
High on upward wing they rise and flee away.

ALABASTINE is the only Wall Coating, which is extensively and persistently advertised to the general public, and is what the **people call for** when they want anything in the line.

THIS IS NO DREAM

Our publicity campaign for 1907, as planned, is sure to more than double the already large trade for **ALABASTINE**.

Our new illustrated catalogue, "HOMES, HEATHFUL AND BEAUTIFUL" is the **sensation** of the season in the advertising line.

Get ready to supply the large and growing demand for **ALABASTINE** by ordering a full assortment, either direct or through your nearest jobber, and DO IT NOW.

CLOSET CONNECTIONS TO SOIL PIPE STACK

[Two more letters sent in replying to the question, the prize-winning answer to which was published in HARDWARE AND METAL of December 29.]

We publish herewith two letters received in connection with the last contest, they speak for themselves:

In connection with the sketch by J. R. Wainwright, of Sudbury, Ont., we beg to express the opinion that, as in the case of last week's illustration no vent would be required in the case of any of the fixture connections shewn, for the reasons mentioned in our last issue, referring to the letter by "X" of Ottawa, we think most of the arguments are good, but do not think that ventilation of short fixture connection is necessary, because even if there was no current of air, the natural diffusion of the gases would change the air with sufficient frequency.

Sudbury Plumber's Reply.

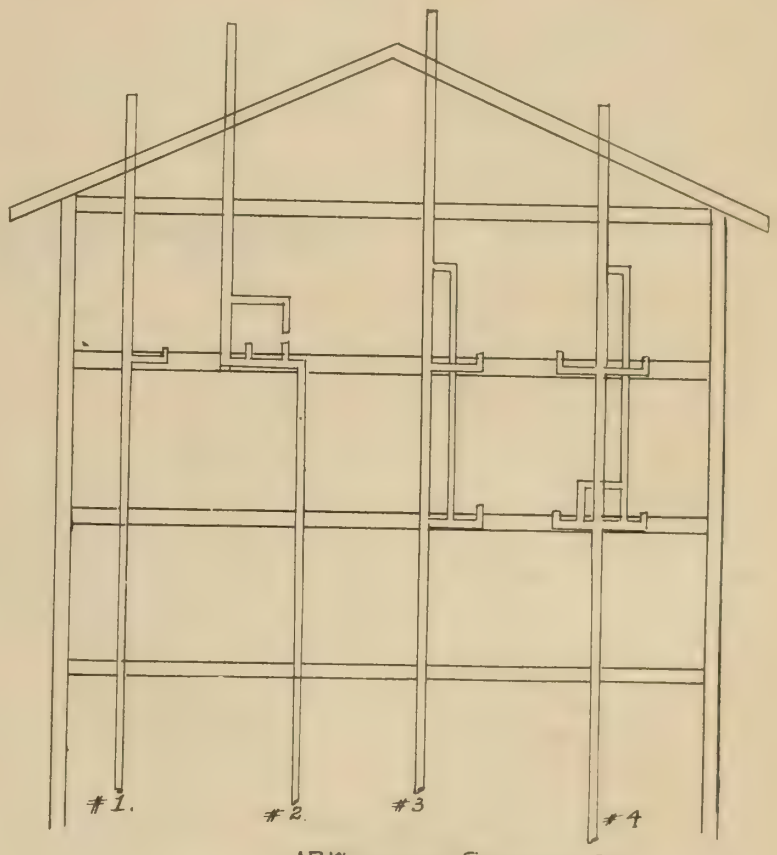
In your judgment is it essential that evey closet connection to stack should be provided with a break syphon? Yes. If the closet waste can be called a stack, when it does not continue through the roof. But if the soil pipe has to continue through the roof to be called a stack, then a special break syphon is not essential in the following circumstances:

1. Where only one closet is connected to stack. The stack acting directly as a break syphon. As in sketch No. 1.

2. Where two or more closets are connected to stack, whether it be on the same floor or not. The highest connection does not require a special break syphon. As the condition is the same as in No. 1, sketches 2 and 3.

3. Where two closets are connected one on each side of the stack, neither need a special break syphon, as the condition is the same as in No. 1, sketch No. 4, both connections being the same level.

J. R. Wainwright, Sudbury.



An Ottawa Reply.

With wash down closets adjacent to soil pipes, break syphons are, in my opinion, unwarranted.

To-day, these fixtures have a diameter of about three inches, and the lead bend, to which attachment is made, has a diameter of four inches. Here, then, is a difference of 7 inches in the square of each circle. While the closet is operating, a column of water solid in form, equal to the circle of the closet is in action. Directly it leaves the bowl its syphonic force is broken, by reason of the enlarged channel, the moving column with extended play, is transformed into a splash, in its descent, drawing on the air reserve, that the four inch bend allows, thereby saving the seal of the trap. This argument, would suit a closet any distance from the stack.

This, I think, fully answers your question, but your readers, having in mind the position of the closet, will, perhaps, follow a further reference to the utility of the break syphon. Owing to the two-fold purpose of this tube, it is rather difficult to be clear, and "stick to the point."

To impress my argument forcibly, suppose, the closet was attached to a

bend with a diameter no greater than its own, the syphonic force would not be broken until it left the bend. A break syphon then would be of primary importance, but under the conditions which seem general, the break syphon is of only secondary importance.

As a means of thoroughly ventilating a system, its importance is recognized. This, alone, is why it should be connected to, or below every closet tray.

X., Ottawa.

PLUMBERS IN THE GAS TRADE.

The gas field, as far as the sale of gas fixtures, stoves, piping of houses and other appliances is concerned, was formerly almost entirely controlled by the plumbing trade, says the Metal worker, but since the gas companies have through the introduction of approved appliances and the reduction of their manufacturing expenses found it profitable to sell gas at prevailing rates they have largely monopolized the business through a desire to increase the consumption of gas. And in order that the gas consuming appliances should be brought before the people and be readily purchased they have introduced them at phenomenally low cost. For this reason many plumbers have neglected the trade or else abandoned it altogether.

The gas companies continue to market appliances of this kind at low figures, but their entire aim is to sell material which will consume gas, apparently no attention being paid to the economic combustion of the fuel. This is to their interest and it is to be expected that they would have no special

desire to sell gas consuming goods at a low price where the consumption of gas would be low, so long, of course, as it is not particularly wasteful. During the past few years a number of gas heaters, gas burners and appliances for heating water have been placed on the market which were specially designed for economical combustion of fuel and it would undoubtedly be greatly to the advantage of plumbers to make some study of the subject with a view to establishing a trade in these lines. Many plumbers in cities, particularly those whose places of business are located on the main streets, keep their shops open for an hour or so after the workmen have quit, simply to be in their places of business to receive orders that may come in or to make collections, and some of these have found it profitable to sell gas mantles, shades and the like simply to bring people into the store and the showroom, and thus make them better acquainted with their plumbing wares. It is a form of advertising which pays for itself and is doubtless very advantageous.

DISPOSAL OF HOUSEHOLD WASTES.

In a recent book entitled "Outlines of Practical Sanitation," by Dr. Harvey B. Bashore, inspector of the Department of Health for Pennsylvania, reference is made to the disposal of wastes from the country house. If the dry method of disposing of the human wastes is used there will be certain waste waters from the bath and kitchen sink to be taken care of, the author explains, and this, he says, is best done by some form of surface drain suspended over the garden bed. One such drain shown in the book is made of a 6-inch galvanized roof gutter, pierced every 12 inches by 1-4-inch holes. His discussion of the question is as follows: The gutter allows the filthy water to be distributed evenly over the ground without forming puddles and mud holes.

The solid refuse about country and village houses generally adorns the ash pile or alley. The disposal of these products becomes easy, if the various kinds are collected and kept separate. A good way is to have a series of receptacles for the materials and a certain place for each one, or perhaps have all these receptcles arranged together in a large box near the kitchen door. In one receptacle, which might be a flour sack supported by an iron rack, we would collect the rags, paper, etc. In another tin cans, bottles and such rubbish; then in a suitable can the ashes and in another the garbage—that is, the solid waste from the kitchen.

Now as to the ultimate disposal of this solid waste: The garbage is best disposed of by earth burial—simply put into a shallow furrow in a field and covered with a little earth. If the garden bed is near the kitchen a good way is to have a hole in the bed and practice daily disposal of the garbage. Every evening it should be covered with earth, and in addition a tight board lid should cover the hole during the summer months, else the place may become a breeding place for flies and degenerate into a nuisance. The noncombustible part of the rubbish, such as bottles, tin cans, scraps of metal, etc., can usually be sold to the junk dealer, and the combustible part—rags and paper—if not salable, should be destroyed by fire. Ashes can be used in almost any place for filling, making paths and for foundations under pavements.

WARNER'S GAS CANNON.

The Warner Motor Co., Flatiron Building, New York, are introducing a novelty in the form of a gas cannon, which operates by the explosion of a tiny mixture of carbide gas and air. This gas is made from a small lump of calcium carbide, dropped into water, (carbide can be procured everywhere), and flows into the cannon through a small rubber tube, controlled by a stop cock. This charge is exploded by pulling a lanyard which flashes an electric spark inside the breach, making the operation absolutely like the firing of the big 12 inch guns on a battle ship. Carbide gas when it explodes makes a big noise, but its actual mechanical effect (which is power for doing harm) is extremely small as compared with gun powder. A cork or tight fitting cylinder of wood makes the best projectiles for the cannon. One of these comes with the outfit.

Warner's Gas Cannon.

The cannon is made of cast iron 6½ inches long, neatly mounted on a pressed steel frame which fits over the top of the containing box. The gas generator requires only water and one small lump of calcium carbide to provide ammunition for 20 shots. This carbide can be procured very cheaply anywhere. There is a small pinch-cock on the frame of the cannon by pressing which the gas is admitted to the cannon.

The cannon can be used in many ways and one in operation in a window in holiday seasons should attract all the boys in the neighborhood as well as encouraging many sales.

ABUSES IN THE INSTALLATIONS.

Carelessness in bolting up flanged joints frequently leads to disastrous results, says the Valve World. It often happens that when joints do not come squarely together, the workmen, instead of seeing that the line is made square so that the joints will come together properly, will undertake to spring a very rigid piece of work in the bolting, the result being that if something does not give way under this strain on the bolts, it very likely will do so when the pipe is subjected to expansion and contraction.

Another blunder frequently made by workmen is in not taking pains to tighten the bolts evenly so that they will all be brought up together to the same tension. They will start in and tighten up one side, hard, and then when they come to tighten the opposite side, it throws a very severe strain on the side first tightened. If the flange is not broken by this strain, there is the same danger we have mentioned above, that is, that it will break under the strain of expansion and contraction.

It also frequently happens that when leaks occur after steam is turned on they are not promptly and properly attended to. This, of course, is very bad practice, for every engineer knows that if a leak is allowed to run for any length of time it will injure the material, either the metal or the packing of both. Furthermore, it will then be impossible to tighten it by screwing up the bolts.

Rather than go to the trouble of taking the joint apart, putting in new packing and correcting any injury there may be in the face of the flange, some engineers will keep on in a bullheaded way straining the bolts until the flange either breaks under this strain or later under the expansion and contraction, and then they will seek to place the responsibility on the manufacturer by raising a question as to the quality of the goods or packing.

CLOSET TANK LININGS.

Plumbers quite generally throughout the country are now called on to reline water closet tanks, says the Metal Worker. When the tank is taken out and the lining put in the cost is not endured without complaisance by the customer. Plumbers are willing to confess that they desire to procure goods as cheaply as possible, but are equally desirous that they shall be of such a quality as will not bring complaint from customers. In many of the tanks sent out by the supply houses the lining is of hard rolled copper and very light. The tank lining should have a greater thickness and probably would be better if it were of soft copper. The hard copper draws away from the sides of the tank when its contents are emptied, making a movement at the sharp bends in the corners which not infrequently leads to buckles and breaks. The hard copper is particularly weak at the seams and at the point of the connection of the outlet piping. Here the natural movement of copper, when the tank is filling and emptying, results in a break around the outlet which experienced plumbers think could be avoided if soft copper was used. If these same plumbers were called upon to reline tanks they would use heavier soft material, and when they do they have little complaint in respect to the service rendered. Some plumbers go so far as to take the thin lining out of a new tank before it goes into the house and reline it with heavier soft material, throwing the old lining into the old metals for sale. This custom is confined to no one section, and the plumbers feel that it is time for the manufacturers to pay less attention to the demand for lower cost and put a lining in their tanks which will insure more satisfactory service.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, January 4, 1907

"Never busier," is the cry everywhere. This condition of affairs has not been equalled in this city for years. Stock taking has not marred in any way the rush of orders. The old year died with a smiling and prosperous face.

The advance in iron piping is still in the future, but it is believed to be near.

RANGE BOILERS—There is a good demand and the following prices are, well maintained: Iron clad, 30 gallon, $5; 40 gallon, $6.50 net list. Copper, 30 gallon, $25; 35 gallon, $29.50; 40 gallon, $32 net.

LEAD PIPE—Primary markets are still rising, and pipe is firmer. We still quote 5 per cent. discount f.o.b. Montreal, Toronto, St. John, N.B., Halifax: f.o.b., London, 15c per hundred lbs extra; f.o.b. Hamilton, 10c per hundred lbs. extra.

IRON PIPE FITTINGS—The usual trade is being done at unchanged prices. we quote: Discounts on nipples, 1-4 inch to 3 inch, 75 per cent., 3½ inch to 2 inch, 55 per cent.

IRON PIPE. — Supplies continue short and an advance is expected. We still continue to quote as follows: Standard pipe in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, 11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.50, discounts on black pipe, 1-4 inch, 61 per cent.; 3-8 inch, 61 per cent.; 1-2 inch, 70 per cent.; 3-4 inch and upwards, 72 per cent.; Discounts on galvanized pipe:1-4 inch, 46 per cent.; 3-8 inch, 46 per cent.; 1-2 inch, 60 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12; 3-4 inch, $15; 1 inch, $22; 1 1-4 inches, $30; 1 1-2 inches, $36; 2 inches, $50. The discount for black pipe is 70 per cent., and for galvanized 60 per cent.

SOIL PIPE AND FITTINGS—Our prices remain as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER—Quotations are unchanged. Our prices are: Bar solder, half-and-half, guaranteed, 25c; No. 2 wiping solder, 22c.

ENAMELWARE.—We still quote: Canadian bath tubs, plate E1, 5 ft., 1st quality, $20.65 special, $18.65; plate E11 and E21 5 ft., 1st quality, $19.50, special $17.15; plate E35, 5 ft., 1st quality, $24.65, special $22.40. American baths, rolled rim, 5 feet 2 1-2 inch rim, $22.25; 3 inch rim, $20.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special, $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Jan 4, 1907.

The advance on hot water boilers, spoken of in our report a fortnight ago, has not yet been announced, but the new figures are expected to be made known next week. With prices of iron at their present high pitch, advanced prices on boilers were looked for and would have been made some time ago, except for the keen competition existing between the various producers.

Soil pipe is holding firm at the advanced prices, and there is talk of still higher quotations being made this month.

We report this week additional advances on compression and Fuller work, the advance averaging about 10 per cent.

Iron pipe is still short and there does not seem to be any prospect of stocks being gathered by jobbers during the off season. On the other hand, there is much reason to expect that a shortage will continue throughout the coming year. One Toronto house has secured a large supply of one and one and one-quarter black pipe from United States producers, and are selling it at bare cost to oblige customers who have not been able to secure material for jobs under way.

Trade in both plumbing and heating supplies has been slow, the holiday season and the natural falling off of trade at the beginning of the year, making this condition an expected one.

LEAD PIPE — The discount on lead pipe continues at 5 per cent. off the list price of 7c. per pound. Lead waste, 8c. per pound with 5 off. Caulking lead 5 3-4c. to 6c. per pound. Traps and bends, 50 per cent., discount.

SOIL PIPE AND FITTINGS.—New lists will show advances as follows: Medium and extra heavy pipe and fittings, 60 per cent.; light pipe 50 per cent.; light fittings, 50 and 10 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE.—American black pipe has been received in Toronto to relieve the shortage, but it commands higher prices than we are quoting on Canadian goods. 1-inch black pipe is quoted at $1.80 and one-inch galvanized at $6.13. Full list in current market quotations.

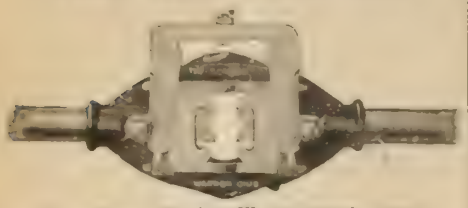
IRON PIPE FITTINGS — New lists are as follows: Cast iron elbows, tees, crosses, etc., 62½ per cent.; cast iron plugs and bushings, 62½ per cent.; flange unions, 62½ per cent.; nipples, 70 and 10 per cent.; iron cocks, 55 and 5 per cent.; Canadian malleable, 30 per cent.; malleable unions, 55 and 5 per cent.; malleable bushings, 55 per cent.; cast iron ceiling plates, plain 65 per cent.; cast iron floor, 70 per cent.; hook plates, 60 per cent.; expansion plates, 65 per cent.; headers, 60 per cent, hangers, 65 per cent.; standard list.

GALVANIZED IRON RANGE BOILERS—We quote: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon standard, $4.75; extra heavy, $6.75; 24 gallon, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. Copper range boilers are now net list.

RADIATORS—Prices are very stiff at: Hot water, 47½ per cent.; steam, 50 per cent.; wall radiators, 45 per cent.; specials, 45 per cent. Hot water boilers have not yet advanced.

SOLDER — Quotations remain firm as follows: Bar solder, half-and-half, guaranteed, 27c.; wiping, 23c.

ENAMELWARE—We quote as follows: Standard Ideal, Plate E1, 5 ft., first quality, $21.65; special $20.25: plate E11, 5 ft., first quality, $20.15, special, $19.75. Lavatories, first quality, 20 and 10 to 30 and 10 off; special, 30 and 5 to 30 and 10 per cent. discount Kitchen sinks, plate 300, firsts, 65 and 5 off, specials, 70 per cent. Urinals and range closets, 20 off. Fittings extra. Lower prices in quantities.



HOT-WATER HEATING DEVICE.

Two Danes have taken out American patents for a circulation device for hot-water heating plants, which they describe as follows: Hot-water heating plants in which air is blown into a main rising-pipe in order to increase the circulation of water in the pipe system are well known. The object of the existing patents in this line is to produce a circulation as powerful as possible in proportion to energy expended and in such manner that the system does not lose heat and so that the use of air does not cause special difficulty.

WALL RADIATORS POPULAR.

Wall radiation for semi-public places is finding favor with heating contractors, not only on account of the economy of installation, but because of its thermal efficiency as well. It possesses many advantages over the older forms for use in stores, railway stations, and bowling alleys.

A Certain Sense of Satisfaction

goes with every MERRELL PORTABLE HAND MACHINE, PIPE THREADING and CUTTING MACHINE. We build them that way.

For doing ALL kinds of threading—under ALL conditions—labor trouble and faulty material included—where speed, durability and ease of control count for something, our word to you is to investigate the MERRELL.

Whether it be stationary or portable—hand or power driven—30 DAYS FREE TRIAL must prove conclusively that your choice should be the MERRELL.

This Portable Hand Machine has encased gears, MERRELL standard quick opening and closing die-head, and the latest improved Cutting-off Knife.

Let us tell you more about this machine—The Chasers, Vise and the large range of work covered.

The most Scientific Burner on the market today. Nothing to equal it in efficiency or appearance

AN ORNAMENT IN THE MOST ARTISTIC HOME

Leather Packing or Gasket makes it absolutely impossible for any leakage of gas from the needle valve adjustment. Cannot light back into the bunsen or puff out when lit. The accompanying detailed sketch cannot fail to convince the most skeptical of its many advantages over every other burner on the market.

CURRENT MARKET QUOTATIONS.

Jan. 4, 1907.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

EVAPORATION REDUCED TO A MINIMUM

is one of the reasons why PATERSON'S WIRE EDGED READY ROOFING will last longer than any other kind made.

Mr. C. R. Decker, Chesterfield, Ont., used our 3 Ply Wire Edged Ready Roofing fourteen years ago, and he says it is apparently just as good as when first put on.

We have hundreds of other customers whose experience has been similar to Mr. Decker's.

"Sovereign" Hot Water Boilers

The main reason for their unprecedented success is—their apparent superiority to all boilers on the market.

Another reason is—their wonderful simplicity.

Of course you practical men know that superiority means simplicity in boiler construction.

The "Sovereign" has made good all claims we made for "Simplified Heating."

You can safely recommend the "Sovereign" all the time. And—it will pay you to do so.

GET OUT AND HUSTLE

If you'll take a half day off and go around town, you'll find hundreds of doors without checks, springs or any kind of an arrangement for keeping them shut.

Get after the people who own these doors, explain the advantages of having a Liquid Door Check on them, and you'll get a surprise at the number of orders you'll get; then go back to your store and write us for prices and full information about **SARGENT'S LIQUID DOOR CHECK**—the best door check on the market, embodying all the good points of others, with many more which the others lack.

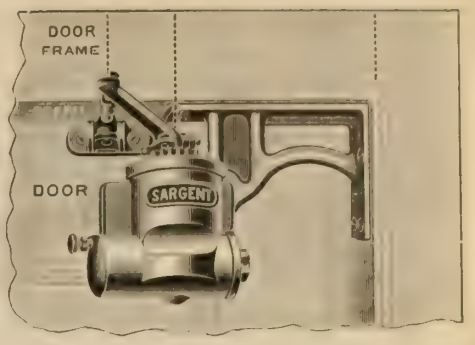
Sargent Liquid Door Check and Spring

SUCCESSFULLY PREVENTS DOORS FROM SLAMMING

Sargent's Liquid Door Check and Spring is suitable for either right or left hand doors.

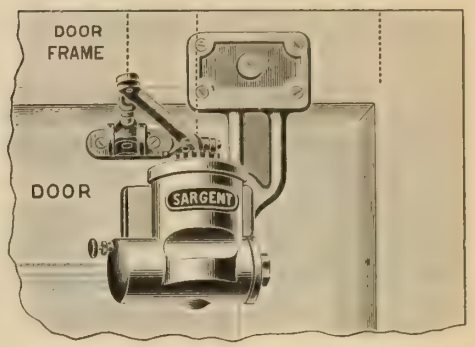
The Spring is adjustable tension, very compact and powerful, and is made from extra heavy clock-spring steel of the finest quality.

The Check is put up regularly for attaching to the door, but special brackets for attaching in different positions to the soffit and door frame and for any kind of door, can be furnished.



The Check can be instantly varied for light or heavy draft by screwing the regulating thumb screw.

For applying, use the directions packed with each check, and follow them carefully.



Have the cylinder indoors where possible.

Made of cast iron, gold bronze finish.

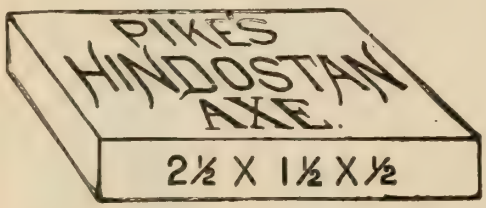
A Promise



of good service is made by many an axe with its brightly polished edge, gilt head and brilliant label. But the disappointments are altogether too frequent. When selecting axes for your stock why not choose those which have been known for years for their reliability.

Dunn's "Clipper" Axe is an axe we have sold for 20 years and have always found it reliable and it is still reliable. No better recommendation for an axe is wanted than such a record.

The "Bedford Ebony" is another axe found for many years on our sales records. It is hand-made by expert axe makers and has the natural forge finish.

Stock weights of these axes are 3 to 3½, 3¼ to 3¾, 3½ to 4, 3½ to 4½-lb.

A Building Necessity

These are the names that have been made synonymous with the

AEOLIAN VENTILATOR

We are the manufacturers of it and control the patents.

We have placed it on some of the finest buildings in the Dominion.

It is a scientific fact that no modern buildings can afford to neglect sanitation.

We are contractors and sanitary experts. Our ventilator is guaranteed and is placed in position to suit the building as to quality and size.

One Testimony:

MONTREAL, June 12th, 1903.
Canadian Pacific Railway Company.
Messrs. J. W. HARRIS CO., LIMITED,
7 St. Elizabeth St., Montreal, Que.

Gentlemen,—Answering yours of June 1st, I am not personally familiar with the merits of the "AEOLIAN" Ventilators but our Assistant Engineer, Mr. F. Crossley, reports that the Ventilators of this type manufactured by you and used by this Company at the Place Viger Hotel, Chateau Frontenac, Windsor Street Station and elsewhere, have proved satisfactory. Yours truly,

E. H. McHENRY, Chief Engineer.

Four Reasons why INVICTUS FIBRE is the BEST FIBRE PAPER on the Market

1. Invictus Fibre is made from personally selected pulp wood cut on our own limits.
2. This special pulp wood is again rigidly culled on arrival at our mills
3. The pulp from which Invictus Fibre is made is manufactured inlour own pulp mill and transferred at once to the paper mill, avoiding all drawbacks of transportation.
4. Invictus Fibre will increase in strength and not grow hard and brittle as does fibre made from sulphite pulp. This is a quality of the peculiar and selected pulp from which Invictus Fibre is made.

A trial order will convince you that we are correct. See that each package bears the words "Invictus Fibre." Every ream contains 480 sheets

Financial Post

Was as inevitable as it was necessary

FIRST ISSUE
25,000 COPIES

Saturday,
JAN. 12th, 1907

This Weekly will contain all the financial news available on investments. Accuracy is aimed at, but technicality is avoided.

The Post will print reliable news in a readable manner. Finance has its romances as well as its dry bones.

Every Investor, large or small, can find something that will interest him. Canadian securities will be fully and completely dealt with each week.

A page will be devoted to banks and banking interests. There will be special articles for depositors.

Every Young Man determined to make a success of life will be interested in the self-help articles.

SPECIAL FEATURES OF THE FIRST ISSUE

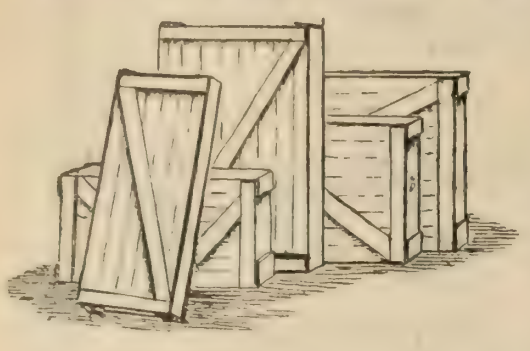
THEN AND NOW—An entertaining and instructive story in parallel columns, showing what a well-known London paper thought of C.P.R. in 1881, and what it thinks 25 years later.

THE GRAND TRUNK PACIFIC—AN INVESTOR'S ANALYSIS—THE QUESTION OF FIXED CHARGES—A COMPLETE MAP OF THE SYSTEM.

THE HUDSON'S BAY COMPANY—The graphic story of the market advances of our oldest joint stock company.

Other special articles by expert writers on Municipal Bonds, the Grain Situation in the West, Branch Banks in the North-West, Cobalt Considerations, the Saving Habit.

THE FINANCIAL POST OF CANADA is a twentieth century newspaper which no investor in Canada—especially at this time—can afford to be without.



Mailed to any address in the Dominion, United States, Great Britain, and Europe for **$3.00 annually.**

LONDON TORONTO WINNIPEG

From 1865 To 1907

FORTY-ONE YEARS

We have been pounding away making horse nails for the past forty-one years. Long enough to know how to make them don't you think? And have a fair acquaintance with the wants of the horseshoers who use them, and the hardware trade who sell them. And yet we haven't learned all. There is another firm whose representatives "know it all," in fact it is stated "they are going to put us out of business in a year;" have a case of wine put up with our friend K. to this effect. Well! Well! Tennyson said in the Brook, "Men may come and men may go, but I go on for ever." We are going to try and hold out the year 1907, if not forever, and we think our "C" brand horse nails are of such good quality and that we have made friends enough in Canadian Hardware trade during the past forty-one years, to warrant us in thinking we shall. Will you do your share, by ordering the "C" brand. Don't accept substitutes; insist on having the brand of horse nails you order and let it always be the "C" brand.

WISHING OUR FRIENDS A HAPPY AND PROSPEROUS NEW YEAR.

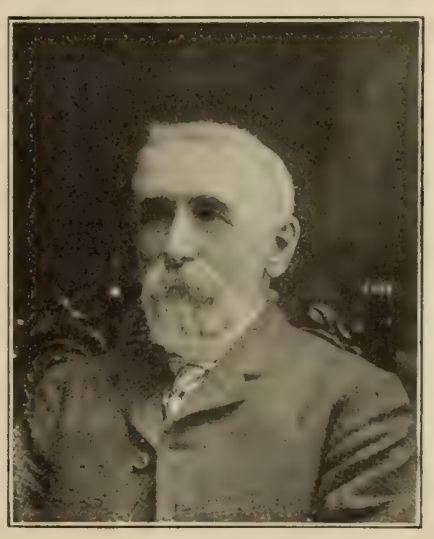
TRAVELLERS AND THEIR SPARE TIME

Some Suggestions for the Improvement of It — The Note Book — Learning Languages — Savings Bank for the Small Change of Time.

The profitable use of spare time is a subject of interest to every one ambitious of success. Calvin D. Wilson, writing in The Sample Case, says of it :



The commercial traveler's leisure differs from that of men located at home. He who lives in one place has the evenings in his house or in his office ; he has hours that he can count on. The travelling man's unoccupied seasons are in small change, waiting for trains, or on railroad rides or buggy trips across country or in his hotel room.

Yet he has many unemployed minutes, which in a week make hours, as dimes and quarters make dollars. What can he do with these that they may count for something in his success ? He can do many things, according to his temperament, health, stage of culture and circumstances. No detailed rules will suit everyone, but general suggestions may prove helpful and each can pick and choose according to his situation. If one does not have a surplus of energy if he has to save up his vital forces in order to concentrate them when in action, it behooves him to seize the idle moments for rest, to sit still in the depot, to doze on the cars, to retire early to his hotel room. Yet even many of the less well-equipped men physically might be benefited by change of mental occupation, according to the present belief that what we often need is not so much repose as the exercise of another set of faculties.

The men with reserves of energy may again be divided into two classes, those who learn chiefly through their senses and such as learn partly by means of reading. The man with a markedly objective mind, who reads principally in the book of men and nature might be diverted from his proper method by advice to become a reader of books and a student.

Keep a Note Book Handy.

We have the impression that traveling men, as well as many others, lose much by often failing to have in their pockets notebooks for ideas, suggestions, plans. Oliver Wendell Holmes said : "No man ever yet caught the reins of a thought save as it galloped by him." It is an invaluable practice to have at hand blank book and pencil, and to get into the habit of seizing the reins of thought as they gallop by. Many of these, perhaps most of them, may prove worthless or impracticable, but in any case you have the ideas written down for examination and scrutiny at leisure. The man with the notebook will soon find he is having more bright ideas than came to him formerly. Then he preserves the facts that come to him by the eye or ear for inspection : he is not trusting to memory which may fail to bring back accurately what he wants when he wants it. The notebook habit causes him to put his ideas into somewhat better shape than if he leaves them unformulated and floating in his mind. The notebook helps him to learn the value of his own thoughts. It gives him a record also of his own ponderings and experiences that may have in the future a larger value than he now perceives. If he saves his thoughts thus, records his observations, while waiting for trains or shut in his hotel room and studies these jottings, he will probably find some diamonds among the pebbles. He may have jotted down in two minutes the idea that proves the germ of a larger future. In times when no new ideas come, the moments may be well spent in looking over the notes already made. Such a course soon comes to have an interest of its own and is a pleasant occupation. It takes away the feeling of wasting time and the spirit of impatience at delays.

E. FIELDING, TORONTO

Who takes care of the cash for the Commercial Travelers' Association of Canada, besides conducting a large business in Turpentine and Linseed Oil.

Study Languages.

There is another line of mental effort, for which odd moments may be utilized, the result of which may be of especial value to traveling men who are able to follow it. This is the learning of a new language. No one needs to be more than reminded that in such a country as ours with its mixed population the knowledge of other languages than English is of every-day value. This is true particularly of traveling men, many of whom are carried by their business into communities where German is commonly spoken. One may be sent by his firm into the French-speaking portion of Canada or Louisiana. His employers may require a man who can talk with the Mexicans in their own tongue, or go into the settlements of the Swedes or Norwegians. His house may have extensive plans that reach out over Europe. In any of these cases the man who is already equipped with a working knowledge of German, French or Spanish may get the plum of the mission. Being able to do what the majority cannot do, he gets a better salary, and if sent abroad gets foreign travel thrown in

Spare minutes tell wonderfully in the acquiring of a new language. The mind comes to it as a change and so with fresh interest. The little learned in a fragmentary way gets in time to be fixed in the memory. Of course some men have no faculty at all for new languages and such, after a fair trial, will have to limit their sphere of business to the people who talk their native tongue. But after all, most men can do far better in learning another language than they think at first thought. Nearly any one can get a speaking acquaintance with German, French or Spanish, if he sets himself about it in the right way. A beginning can be made by the use of such little books as are to be gotten in almost any book store. These appear under some such titles as "How to Speak German Without a Teacher." Any librarian or book dealer can give the information. Something at least may be acquired in this manner and such a book may be carried about and conned anywhere at odd times. A few weeks of this study will bring a man along to a point where he will see what further help he needs. If he can be in one place long enough to get the assistance of a teacher, so much the better. He may in some cases be able to get in touch with night schools or the classes in languages in the Y.M.C.A. Presently he will be reading German or French books on his journeys and talking in these languages on his travels to any who understand them. In due time through use of spare time, he will be equipped for a wide field of employment.

The ambitious traveling man who has gotten a working knowledge of one foreign language will not be likely to stop there. It is a general experience that the learning of other languages becomes much easier after the first one. As is well known, all classes of people in Europe think little of knowing several languages beside their own ; of course they often have the advantage of hearing these spoken around about them. Yet what is done by unschooled European peasants ought to prove simple for as bright men as American commercial travelers commonly are.

Spend Time in Systematic Reading.

Reading with a purpose, for some definite end, is of course, a universally desirable use of spare time. This may or may not be apparently of immediately available import, yet may further us greatly. President Roosevelt has stated that he is fond of reading in his leisure hours the history of the dismemberment of the empire of Alexander the Great. This seems a rather remote subject from

American politics; and yet the completed record of the causes and changes that disintegrated one of the greatest empires of ancient times affords a picture in which to study the perils of modern society. The statesman who is familiar with these stories of the past is better able to understand and forestall the dangers of America. Cecil Rhodes, the great empire builder of South Africa, was a constant reader of Gibbon's "Decline and Fall of the Roman Empire," and doubtless thereby had his mind enlarged to understand the scope of the problems of the British Empire.

The intellectual horizon of the traveling man, whose actual business of selling goods may seem quite disconnected from general knowledge, will unquestionably be widened by the reading of history, for example. The wider and stronger his mind, provided he does not sink into a book worm, the better he can do business. He will have a clearer and saner judgment. When reading is connected with daily activity there is little peril of its making men impractical. Roosevelt is one of the best read men of the day and his scholarship has not impaired his practical judgment. The traveling man might well read all American history to advantage. He might take up an elaborate history of business from its beginning to its present developments. Still better, if he aims at culture, would it be to plan a course of reading such as would cover all the most important subjects, history, ethics, political economy, finance and so on. At the end of a few years, by use of spare time alone, he would have furnished himself with all the general facts that any man in any occupation may have gained. He surely should guard against feeding his mind exclusively with the very interesting but scrappy information to be gotten from newspapers and magazines; such reading will at most afford but a superficial knowledge of anything.

How One Man's Study Helped.

If one has a particular bent, he should follow it if it is along lines that promise development. The man of inventive turn may, in his odd moments, note and work out some needed invention. The man of mechanical mind certainly might find pleasure and profit by searching the world as he goes about for the things that are needed or that can be improved. Another man has a turn for mathematics; if he has, he possessses a gift that, worked constantly and to its utmost, may at any time bring forth fruit to his great advantage. We are told that Mr. Hughes, the governor-elect of New York, takes with him on his vacations books on mathematics and such works as Kant's Philosophy. When he had the investigation of insurance matters on his hands, his great skill in mathematics served him well. It seems a long way about for a lawyer to spend time on mathematics and philosophy; yet mathematics in this case, as in many another, worked directly into his practice and Kant's Philosophy doubtless kept him in touch with noble views of human life, and with processes of pure reason. Likewise, the commercial traveler may find any real study while in his leisure. The improvement of mind will certainly serve him and the particular knowledge may at any time fit into a place in his work.

There are still other men who are travelers who have in them, perhaps in an undeveloped state, the gift of writing for the press. The leisure of such may be well employed by writing of their interesting or unusual experiences for the newspapers or magazines, or preparing material for a book, a story, a novel, or a volume on business or on their particular kind of work. Many writers would think they had a gold mine if they were in possession of the impressions and experiences of such commercial travelers as have long made their rounds over a great scope of country.

Reading for Relaxation.

Reading for relaxation has its fit place and seasons and the commercial traveler requires, at least at times, to get away from the actual world into the realm of romance and of poetry and he does well to permit himself the privilege within reason. He surely ought besides to equip himself with some of the vital books that impress the principles of sound faith and wise living. He cannot afford to be without a strong grasp on the truth and his spiritual relations and duties. Otherwise, the spare moments will be the seasons of depression and of darkness. The man who is brave in the actual contact with men and with business is apt to feel unnerved and cheerless in the idle hours.

"'Tis not in the battle nor in the strife
We feel benumbed and wish to be no more
But in the after silence on the shore
When all is lost us but a little life."

In the lonely times, in the lull of the battle, we need anchorage and hope and faith. He is wise who, at such times, has in his grip a book that will rekindle his soul and show him the great truths that remain and are the same both when we are glad and busy and when we are listless and solitary.

The opportunities for exercise and improvement of health in odd moments should not be overlooked. On journeys Talmage used to get off the train during its stops and walk briskly up and down the platform for a few minutes. When he was lecturing, he would take a street car line from his hotel to the country and treat himself to a five or ten minutes' run. The commercial traveler who has ten minutes wait at the depot can step out into the open and fill his lungs with fresh air or snatch a brief walk for a few squares. The spare minutes of each day will do much to invigorate him if he seizes them.

KNOW THE GOODS YOU SELL.

At the recent banquet of the Commercial Travelers' Association of Canada held in Toronto, Thomas Kinnear, a successful wholesale grocer, emphasized the importance of a traveler telling the truth about the goods he sells. "It pays in the long run," he said, "and you may lose an order now and again, but the loss is only a temporary one. Your customer will come back when he finds out that you have dealt honestly with him. Learn to know your goods, study them thoroughly so that you can speak emphatically and authoritatively when selling. If you are thoroughly posted on your goods no competitor can draw a herring across the track and kill your sale." Mr. Kinnear also laid stress upon the improvement in the system of selling goods. It was different now to thirty years ago, when it was the almost unbreakable custom to take your customer out for a drink, before making a sale. The reverse is now the case—it seemed to him that this was nothing more or less than buying trade. He didn't believe in buying trade. It was not necessary. Superior knowledge on the part of the traveler, properly conveyed to his customer, will win out in the end.

SUCCESSFUL JOBBERS AND SALESMEN.

No. 34.

F. W. Lamplough & Co., one of Montreal's manufacturers' agents and jobbers, have recently secured the services of F. G. Brenton as their representative on the road. Mr. Brenton, although a young man of 30, has already made a name for himself in hardware circles.

T. H. BRENTON,
Representing F. W. Lamplough & Co., Montreal.

He successfully represented the Jas. Stewart Mfg. Co. of Woodstock, Ont., in Western Canada for 3½ years, and in that time, by dint of hard work and a pleasant disposition, worked up a very extensive connection among western hardware dealers.

F. W. Lamplough & Co. have the agency for some of the finest lines on the market to-day, and in view of the fact that Mr. Brenton will cover the field from coast to coast, he should soon be well known to the trade, who we feel sure will receive him in the way he deserves.

DEALERS AND THEIR STORES

IMPROVEMENTS AT PORT ARTHUR

Within the last three months the Marks-Clavet-Dobie Co., Port Arthur, have made extensive improvements in the way of reducing the risk of fire on their premises, having installed nine Bowser Oil Pumps, the tanks of which are located in an absolutely fire proof vault in the basement, which is just completed. They have also installed one of Devs' Time Registers, which is working satisfactorily, their staff numbering 35. It is also their intention in the near future to instal an up-to-date electric cash carrier system and electric elevator.

"Our Xmas business far exceeded any previous years," they write. "We had some good windows but unfortunately were unable to have them photographed, through frost caused by a crack in the plate glass. However, in the future, we hope to send you from time to time, photographs of our displays."

"By the way," continues their letter, "we have just completed our contract for the largest freight sheds in the Dominion, for the C.P.R. at Fort William, built of galvanized corrugated iron, 600 feet long by 60 feet wide."

NEW SPORTING GOODS FIRM.

G. A. Brittain, of the Ashdown Hardware Co., and R. J. McKay of the Hingston-Smith Arms Co., Winnipeg, have joined in a partnership under the name of the Western Sporting Goods Co., and will do business in the Stobart block, on Portage Ave. They expect to open for business by the beginning or the middle of February. Messrs. Britton and McKay have been for the past few years among the foremost of Winnipeg sportsmen.

UP-TO-DATE LISTOWEL STORE.

Messrs. Adolph & Bonnett, Listowel, are removing their stock to their new stand, which they have had specially fitted up for them. When they get everything into position they will have the most up-to-date hardware store in the district, says the Listowel Banner. The new stand will give them more than double the capacity for the display of their large stock. The front has been entirely rebuilt, with new show windows, enclosed, over which is placed prismatic glass, furnishing excellent interior light throughout. On one side of the store have been placed 480 drawers, all carefully sampled, so that goods will be displayed and instantly accessible. Large wall show cases have been built in for the display of silverware on one side and tools on the other, and complete apartments for sorting and handling glass built at the end of the shelves. In fact the classification of the whole stock has been systematized so that any article can be got at at once. In the rear and in part of the upstairs are two store houses where surplus stock will be carried. The workshop for the tinsmithing department is located at the rear upstairs. The basement is floored with cement and well lighted, and will be used for the heavier bulk goods.

ONE OF ORILLIA'S STORES.

The Orillia Hardware Company, which is composed of W. E. Anthony, for 20 years employed with Peaker & Son, Brampton, and S. L. Mullett, who was 11 years in Seaforth, and had four years Western experience, a year ago bought the stock and leased the premises of G. H. White, Orillia.

A new brick workshop 25 x 40 feet, has been built, in which their plumbing steam-fitting and metal work branches are conducted. Noteworthy among their contracts during the past season has been the steam heating plant installed in the Methodist Church at Orillia.

The accompanying cut shows a view of the main floor of their store, which is 35 x 120 feet, and is connected by an arch of about 14 feet, to a room which is used exclusively for the display of stoves, tinware and farming tools. Connected by a fire proof door is the oil house, equipped with the latest improved oil tanks. In the rear are three buildings used for storing old stoves, poultry netting, wire, and cement. Beneath the main shop and stove room is a full sized celler, which contains their stock of rope, woodenware, white lead, glass and nails. The second floor is used to display stoves, and for the storage of unsaleable goods.

Messrs. Mullett & Anthony are enterprising advertisers, and strong believers in up-to-date window dressing.

BIG CHANGE AT VICTORIA.

As recently announced in these columns, Messrs. Griffin & Greenshaw, of the firms of Eakins & Griffin and Randall & Greenshaw, both of Shoal Lake, Man., have purchased the old established business of Nicholles & Renouf, Victoria, B.C. The new firm are remodeling, enlarging and renovating their store, which is located on a splendid corner only a short block from the business centre of the city.

When the B.C. Hardware Company, the firm's business name, is ready for business, their store will be one of the most modern in British Columbia. Two new windows will be installed, one on Broad St., the other on Yates. The entrance will be large and set off by immense pillars on each side. The store will extend the full length of the structure, the office being placed on the second floor at the rear for the purpose of increasing the accommodation. Thus the alterations planned will improve the lighting, making the general apartment more cheerful than at present. They will also increase the floor space, this being necessary on account of the large amount of new stock ordered. As members of the new firm are both experienced men having plenty of enterprise and every confidence in the future of the Canadian West, their success seems assured.

CANADIAN HARDWARE STORES, No. 11—The Orillia Hardware Company's Store.

The St. Lawrence Saw and Steel Works Company has been incorporated with a total capital stock of $40,000, to manufacture saws, bits, shanks, axes, shovels, also machinery of all kinds. The chief place of business will be at Sorel, Que., and the directors are, C. D. Pontbriand, J. Pontbriand, H. M. Pontbriand, of Sorel, and T. D. Pontbriand, of Chicoutimi, Que.

RETAIL HARDWARE ASSOCIATION NEWS

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

PROTEST AGAINST PARCELS POST

The executive committee of the Ontario Retail Hardware Association urge the trade throughout Canada to protest against the proposed legislation extending the parcels post to include a c.o.d. collection feature. They suggest that every retail dealer mail a letter to the Postmaster-General so that it will arrive in Ottawa about Feb. 1.

The accompanying draft form of letter should not be copied entire, but is suggested as a basis upon which to outline an argument against the proposed legislation. All letters should be written on the firm's business paper. If the local member of Parliament has not been written yet he should be asked to oppose the measure by a letter or petition signed by every retail merchant in each town or village.

THE PRESS IS MUZZLED.

How many hardware dealers in Canada read accounts recently of serious elevator accidents in Toronto departmental stores? A woman was killed in Eaton's store, but the daily papers barely announced the fact. A crowded elevator crashed down several stories in Simpson's and several had to be taken to the hospital with broken legs and other injuries. As before, the matter was very briefly referred to by the daily press.

As pointed out in these columns before, the leading daily papers in Canada are controlled by capitalists largely interested in the big mail order houses. This fact constitutes a serious danger as the press is becoming an increasing power for good or ill in the life of the people.

THE QUESTION BOX.

Every hardware merchant in Ontario is invited to send short questions on trade matters to the editor of Hardware and Metal. These will be published on the association page before the convention and then answered at the convention by some one selected by the president, a general discussion following, a report of which will be given in Hardware and Metal for the benefit of those unable to attend.

The questions should be sent in at once so that they can be announced before the convention. If time permits questions may also be asked at the convention but those received beforehand will, of course, receive first attention.

PROFIT IN MUTUAL INSURANCE.

The last quarterly statement of the financial condition of the Retail Hardware Mutual Fire Insurance Company of Minnesota is undoubtedly the most satisfactory from the standpoint of the policy-holders of any statement ever issued by the company.

A healthy increase in business over the amount written during the corresponding period of the previous year, is reported and the company was enabled to add 10 per cent. of the premiums received to the reserve fund and then declare a return dividend for the year 1907, of 45 per cent.

The ratio of losses to premiums was 32 per cent., while the ratio of expenses to premiums was 13 per cent., making the total cost of doing business, including losses and expenses, 45 per cent.

The company now has a cash reserve of upwards of $86,000, which is steadily being increased by the addition of a reasonable percentage of the profits each year. The fact that the expense of doing business was only 13% of the amount of premiums received, speaks volumes for the conservative management which the company has enjoyed and is one of the strongest arguments in favor of the mutual form of insurance, when properly conducted.

Draft Form of Letter.

..... 1907

To the Honorable Mr. Lemieux,

Postmaster General, Ottawa.

Dear Sir,—We understand that you are preparing an amendment to the law providing for the existing parcels post system, the said amendment being intended to provide for the collection on delivery of parcels. Such a system would enable mail order houses to send goods c.o.d. to any part of the country in competition with local retailers.

The large departmental stores are already injuring local merchants to a tremendous extent and any change in the postal laws which would favor them would be a great injustice to the thousands of merchants who have their capital invested in the small towns and cities throughout Canada, aiding by their presence, their energy and their taxes in the up-building of the small communities upon which Canada's future prosperity must depend.

We do not ask for any special privilege and protest against the mail-order houses being given any favors. The proposed legislation would tend to reduce the number of retailers, thus destroying competition, depreciating the value of real estate in the towns and having a similar effect upon the farming districts, as well as tending to decrease the opportunities for pleasure enjoyed by the farmer's family. The deserted farm districts of the New England States are an object lesson to avoid.

We trust that you will see the fairness of our argument that the legislation would be detrimental to the continued progress and development of this fair Dominion and we would ask that you reconsider your announced intention of introducing the proposed amendment.

Yours very truly.

They that stand waiting for fortunes, will never wear out their shoes.

STOVES AND TINWARE

IMPORTANCE OF FIREPLACES IN HEATING.

In discussing the question of heating a village dwelling by means of stoves Dr. Harvey B. Bashore states that the halls are usually cold and, in addition, even in the rooms where stoves are placed the floors are from 6 to 8 degrees colder than the temperature 4 or 5 feet above, a fact easily proved by experiment. As a consequence one's feet are just so much colder than one's head and shoulders. These two defects, cold halls and floors, are certainly factors in producing catarrhal inflammation of the throat and nose, if nothing worse. To remove these defects to a minimum it is necessary to alter somewhat the construction of the rooms. Every one knows the value of the open grate, not so much as a heater, but as an equallizer of room temperature, and herein lies our remedy. Every room should have such a grate, or its equivalent, simply an airshaft connected with the chimney and opening into the room at the floor level. An airshaft so arranged and of suitable dimensions, answers almost as well as an open grate and furnishes the means whereby rooms may be heated very well with ordinary stoves.

When a room which has no fireplace is heated, the heated air rises and spreads along the ceiling in a thick cloud, and if a window is opened the warm air rushes out before it has done much good ; if, on the other hand, there is an open grate, some of the hot air escaping up the chimney creates a partial vacuum ; this, consequently, creates in the room a movement towards the opening, and the upper heated air is more diffused about the room, making the temperature more uniform.

The halls, whether they contain a stove or not, should have an airshaft, for it will assist somewhat in "sucking out" the heated air of the adjoining rooms. A small oil heater placed in the lower hall will be of assistance in keeping the hall temperature at the right point.

TIN CANS UNIVERSAL.

"The American tin can has revolutionized the world," said a millionaire tin can manufacturer, recently. "It has belted the globe and conquered the heathen nations in all lands. Last year in Japan I saw American tomato cans doing service as flower pots. In China I found salmon cans from this country used as soup ladles, and up in the Himalayas I saw painted tin cans used as head dresses for some of the idols."

He may have added that American tin cans are used as hand mirrors by South Sea Island belles, and as ornaments dangling from their necks by some of the Patagonian chiefs. In the Arctic regions Peary found Eskimos using tin cans, that were originally packed with a favorite brand of California peaches, for bird traps. The bright flashing of the tin on the top of a pole attracted the curiosity of the birds, so they could be induced to fly close to the hunters. A queer sort of tambourine or drum was found by one explorer in the Terra del Fuego Islands made out of tin cans. A tribe of Indians on the shores of Behring Strait picked up an American tin can which had been washed ashore, and preserved it as a strange relic of the sea. When a white explorer visited them, the Indians were equally divided as to its origin. Some thought it was the skin of a new kind of sea monster, and others a memento from the gods, with powers for good or evil. It was sacredly preserved and admired until the white visitor presented the Indians with half a dozen similar cans after he had eaten the contents of soup and vegetables from them.

NEW McCLARY TRAVELER.

Gordon Ritchie, for a number of years head of the selling staff of the Sherwin-Williams Company, Montreal branch, has severed his connection with this

GORDON RITCHIE.

Who will represent the Montreal Branch of The McClary Mfg. Co. in future.

firm and accepted a position on the traveling staff of the McClary Manufacturing Company.

Salesmen, like poets, are said to be "born, not made" and Mr. Ritchie is peculiarly destined to make a success "on the road." He is alert, well educated, speaks English and French fluently, has a quick eye, full of go and snap, and, withal, is unassuming and extremely popular.

Gordon is a young man who will serve the McClary Manufacturing Company with faithfulness and energy.

A. A. Brown, Montreal manager for the McClary Company is to be congratulated upon this, the latest acquisition to his staff of salesmen.

KITCHEN UTENSILS.

The accompanying cut shows one of the many lines manufactured by John Shaw and Sons, of Wolverhampton, Eng., who have but lately undertaken the manufacture of kitchen utensils in aluminum, tin, steel, brass, and copper, to which they have given their well

"Governor Brand" Kitchen Utensils.

known mark "Governor Brand." They are represented in Canada by J. H. Roper, 82 St. Francois Xavier St., Montreal, who will supply any dealer with information, and a fully illustrated catalogue of these goods.

STOVE SUGGESTIONS.

Hardware merchants are seeing the great need of handling a good line of stoves. In fact heavy hardware is becoming more generally handled every year. Most merchants select some good line and secure a monopoly on it, and take great interest in making it a leader. To do so, a guarantee from the manufacturer should be procured, guaranteeing the baking and cooking quality of the stove. A great many things have to be contended with in the sale of stoves.

First, the stove should be carefully studied. A trip to the factory would enable the dealer to talk intelligently on the construction of the stove, also to compare it with any weak points on other prominent stoves.

Second—The place where the stove is to be placed should be studied, seeing that the flue is in perfect condition, which is easily done by lighting a piece of paper and placing it in the pipe hole, to see if the draft is all right.

Third—A great many people want stoves on trial. While this method of selling may be all right with parties with whom you are intimately acquainted, it would not be well to give every person that privilege, as some are never satisfied, and may see a very elaborate looking cheap stove, which they think would suit them much better than your more serviceable one. Unless some agreement is made, whereby if the stove is found O.K., the parties would be made to retain it, the dealer will have to take the stove back, explaining that it will be necessary to sell it as second-hand.

A good plan for this time of year is to have a special stove sale, it being much better to sell surplus stock than having money tied up all year, as it could be placed to much better advantage buying new Spring goods. If two different lines are carried, select one and advertise a special sale, not neglecting to quote prices in your ad., also drawing attention to any special feature of the stove.

PROFIT SHARING IN MONTREAL.

The Jas. Walker Hardware Company of Montreal, have adopted the profit-sharing system in the running of their business. There will not be any material difference in the business itself, with the exception that Messrs. Jas. and D. S. Walker will give over the management to F. Max Hill, who for several years was one of the managers of Weed & Co., of Buffalo, N.Y., and, previous to that, connected with the Yale & Towne Manufacturing Company, of New York City. Mr. Hill has the reputation of being one of the best posted hardware men in the country, and the addition of his experience is counted on being quite a factor to the concern.

Messrs. Jas. and D. S. Walker will not wholly disassociate themselves with the business, but will remain as directors, occupying the positions of president and vice-president respectively. It has always been the policy of this firm to recognize faithful and capable service, and the opportunity to enter the company has been readily accepted by its employes. Several of the oldest employes have been given a block of stock in the new company, and the remainder will participate in the profits.

This is the 50th anniversary of the firm, it having been established in 1857 by Jas. Walker, the father of the above mentioned gentlemen, and strange to say, the business has never moved more than one block from where it started. It at present occupies the building next the Bank of Toronto, on St. James St., and extends right through to Notre Dame St., where the shipping is done. This property has recently been acquired by the firm.

Although the store is well and finely fixed up—being considered one of the best laid out hardware stores on the continent—Mr. Hill, who is of a progressive nature, contemplates many changes, which will not only add greatly to the general appearance of the store, but will facilitate the filling of orders. Paints and several other lines will also be added and it is confidently expected that the united and loyal interest of all connected with the company will insure for the customers of the firm the best service the trade can offer.

EXHIBITION IN MONTREAL.

"Do the Citizens Want an Annual Exhibition Held in Montreal?" is the title of a booklet issued by the Montreal Business Men's League, which was incorporated and established six years ago—one of its objects being to advertise and bring people to Montreal.

An exhibition would no doubt attract a large number of visitors to the city and prove of great material advantage to the citizens. The position of Montreal is more advantageous than that of almost any city in Canada, for the bringing in of visitors from a distance. The Province of Quebec has a distinct link with the densely populated Eastern States. Thousands of the residents of that part of the United States would avail themselves of the incentive offered of visiting Canada upon such an occasion. Interest in the country, relatives and friends in Canada, cheap railway fares and former residence here, would all combine to bring to Montreal a vast number of well-to-do people, whose "ready-spending" characteristics would greatly swell the profits of merchants, hotels, boarding houses, etc. People go to the Toronto exhibition from all over America. Why not Montreal?

An exhibition in Montreal would not alone bring in a direct and important new revenue to the citizens in every conceivable way, but would serve to advertise the city abroad. Toronto exhibition has made that city widely known in all parts of the world, and has, in a great extent, advertised Canada as a progressive country.

Advertising pays, but more advertising pays better. If the Toronto exhibition helps to advertise the country in any way, it's only reasonable to suppose that an exhibition in Montreal would help along the good work the Toronto business men are already doing.

There is no part of the Dominion in which exhibitions in the agricultural districts are more successful, or better attended by the community in general, throughout the province, than in Quebec and it's up to Montreal to organize such an exhibition, to finance and manage it as a public enterprise for the benefit of the city, and of the province and Dominion at large.

SIC 'EM.

"The trouble with some business men," remarked a manufacturer who is well known for his enterprise and business enthusiasm, "is that they are lacking in the quality of energy. A man cannot do anything in business unless he has got some energy about him, and the more he has the better. There are some dogs that will bark at a tramp but the moment the tramp makes a movement towards them they will turn tail and get around the corner of a house. Take a fox terrier, on the other hand, and sic him on, and he gets right down to business and sails right in. When I hear business men talking in gloomy tones and displaying apathy, I just say, "Sic 'em. Sail in and tackle your difficulties."

SIMPLE ACCOUNT SYSTEM.

Although there is no business too small for the loose leaf system to be adapted to some readers may be interested in the simple account system adopted by Bruce and Sanderson, a Toronto retail firm who find it impossible to do a straight cash trade.

By using counter checkbook an itemized statement accompanies each order and a copy is kept. These copies are kept on file in a quarter cut oak filing cabinet. An ordinary Shannon file does the rest. Alphabetically arranged on this file is an ordinary bill head of the firm for each customer and under it a sheet of plain paper. Each morning the totals of the orders sent out the day before are charged on these bill heads and a piece of carbon paper gives a copy on the plain sheet below. Suppose a customer comes in to pay. His account is made and can be produced in an instant. If he pays in full the bill on the file is receipted and handed to him and the copy is destroyed as being of no further use. The copies of orders up to that date are also destroyed as being of no further use. If the customer pays something on account, a credit is made on the bill head and that is given him as a receipt, showing a balance due. A new bill head and clear sheet are put on the file and the balance brought forward. As soon as enough is paid to clear this balance the copy of the old bill is thrown away.

The invoices are kept in a filing cabinet not reserved for them. All invoices of each firm from whom they buy are kept together arranged in order of date. In this way the wholesale dealings of the firm for years can be kept in one small cabinet without a scratch of a pen.

THE BUSINESS SITUATION.

By B. E. Walker, President Canadian Bank of Commerce.

While we are enjoying an extraordinary prosperity, there are signs about us of a strain which must bring trouble if they are disregarded. We are a borrowing country, and we cannot be reminded of this too often. As we fix capital in new structures, public or private, railways, buildings, etc., some one must find the capital in excess of what we can ourselves provide out of the saleable products of our labor. The number of countries willing to buy our securities has been steadily increasing, but we must not be blind, as we sometimes seem to be, to the fact that our power to build depends largely on whether these countries have surplus capital to invest. By means of the cable the trading nations of the world have been brought very near together, and while nations of the world have been averted, and the adjustment of capital to the world's needs has been greatly improved, still for the same reason world-wide trouble in the money markets sometimes arises with a suddenness which is alarming to those at least who are not watching for the signs. We are passing through such a period just now, happily without a general breakdown, but unless we mend our ways we are not likely to escape a similar or still worse condition next autumn which may wreck our fair prosperity. Europe is bearing the enormous cost of two great wars, both in the loss of capital actually destroyed and also in the loss to individuals from the decline in the values of the national securities of the countries interested in the wars. And since these wars, losses on an unexampled scale have occurred by earthquakes and fire. The volume of trade and the unusual amount of building in many countries have at the same time vastly increased the amount of capital required. This has been accompanied by a steady rise in prices throughout the world, and by a most pronounced and widespread advance in the scale of personal expenditure. It is true that it has also been accompanied by the greatest production of gold and of other commodities, but the effect of the various influences has naturally been to put upon the money markets a strain which has only just failed to cause a general breakdown of credit. To make the outlook still more serious, the United States, and other less important countries, including Canada, contemplate expenditures on a very large scale for railway and other building. This, then, is a time for every prudent man to survey carefully his financial position. If he has debts he should consider how he will pay them if he should have to face world-wide stringency in money. Has he assets which the world needs for daily use, or assets which will sell only when the sun is shining? If he is happily in easy conditions as to debt, he will, if he is wise, consider every circumstance arising in his business which tends towards debt instead of towards liquidation. As for those who are plunging in real estate at inflated prices and in mining stocks, nothing, we presume, but the inevitable collapse which follows these seasons of mania will do any good.

NO SPECIAL PRIVILEGES.

Both jobbers and retailers are using their influence to induce members of Parliament and the Postmaster General to see the unfairness of the proposed parcels post legislation. To allow country postmasters to become collecting agents for the big mail order houses is to grant a special privilege to merchants who already have great advantages over their smaller competitors.

The retail merchants in the United States have suffered severely from the unfair competition of their big rivals and are up in arms against further extensions of the special privileges given the departmental store by the U.S. Postal Department. They were successful in heading off bills brought into the last Congress by Congressmen Hearst and Henry and are already preparing to make a stiff fight against similar legislation likely to be introduced into Congress this year. The big mail order houses have the cash, but the retail merchants have the votes and influence, which can put out of public life many Congressmen and Senators unless they stand for the interests of their constituents against the big city houses which pay no taxes in country districts and shirk their fair share in their city headquarters.

Two of the most recent developments in the States are the proposals to reduce the rate on parcels of merchandise from one cent per ounce to three cents per pound, and the offer of W. D. Boyce, newspaper publisher, Chicago, to buy out the Postal Department and operate it as a private concern. Boyce represents the big newspaper men who are making milions through departmental store advertising. His proposition is as follows:

"To turn over the postoffice business to a $50,000,000 private corporation under full Government regulation. To reduce by one-half all postal rates, establish rural postal express and apply business methods throughout. To pay the Government rental for postoffice quarters, and charge its regular rates for its postal business. To place in charge a well-known railroad traffic expert to whom the place has been offered at $30,000 annually. To eliminate all sinecures, politics, and the deficit. To pay the Government all profits above 7 per cent. on capital."

If Canadian retailers wish to preserve their rights and prevent the undue growth of the mail order octopus they must be alive and up and doing. In this issue the executive of the Ontario Retail Hardware Association suggest a letter that every dealer should forward to the Postmaster General about Feb. 1, inducing as many retailers as possible to sign the letter or forward a similar one. The suggestion is a good one and should be acted upon.

NEW WHOLESALE AT BRANDON.

The incorporators of the recently organized Hanbury Hardware Company, Brandon, are: John Hanbury, J. Brown, E. Johnston, J. Caldwell, and A. E. Carmichael. The last named was with Marshall Wells Company since their incorporation at Winnipeg and is now manager of the Hanbury Hardware Company. The new company will do wholesale business and have a modern warehouse almost ready for occupancy. The building has five stories, 80x100 feet, being on a spur track. They expect to be open for business March 1st.

MONTREAL BOARD OF TRADE.

George Caverhill has been nominated for the presidency of the Montreal Board of Trade; T. J. Drummond, for the first vice-presidency; C. B. Esdaile, as treasurer; Messrs. J. N. Dougal, and Alex. McLarin, for membership on the Board of Trade Council and Farquhar Robertson for the 2nd vice-presidency. Nominations close Jan. 18, and elections will be held Jan. 29.

BIG YEAR IN SKATES.

Orders are practically all in and filled for skates for this season; in fact travelers are already on the warpath again with new lines, and with improvements here and there, which will be appreciated by hockey players and in fact by all who use skates. A number of orders have already been booked, and skate manufacturers seem to be off to a good start.

Mr. J. S. Bowbanks of the Starr Manufacturing Co., Dartmouth, N.S., stated that many hardware dealers in Ontario had the impression that sales would be very light this season on account of the mild winter last year. He pointed out, however, that their firm did business in all parts of the globe, where they had any skating, and the mild winter in Canada might mean a very cold winter in other countries. He said his firm had made more skates this season than ever before, and had sold practically every one of them.

HARDWARE TRADE GOSSIP

Ontario.

D. E. Rudd, dealer in creamery supplies, was elected alderman in Guelph, last Monday.

L. A. Whitmore, hardware merchant of Edgley, called on the Toronto jobbers this week.

James T. Stewart, hardware merchant of Manchester, has sold his business to James Young.

John Kelly, hardware merchant, was elected mayor of Oakville on Monday, after an exciting contest.

J. J. Coffee, hardware merchant, Barrie, was elected to the Barrie Council in the elections on Monday.

F. W. Moffatt, stove manufacturer, Weston, was one of those elected to the Weston Town Council, last Monday.

G. A. Binns, hardware merchant, Newmarket, was elected to the Newmarket Council at the elections this week.

Alderman S. Clark, master plumber, Hamilton, was re-elected to the Hamilton City Council at the elections this week.

Joseph J. Bouchard, manager of the Star Iron Company, Montreal, was a visitor in Toronto on Saturday of last week.

J. H. Crow, hardware merchant, Welland, was elected mayor of that booming burg by a substantial majority last Monday.

P. Chappelle, hardware merchant of Brown Hill, was a visitor in Toronto this week, calling on the wholesale hardware trade.

Samuel Ryding, plumber of Toronto Junction, was one of the unsuccessful candidates for the Mayoralty of that town in the elections last Monday.

J. B. Campbell, president of the Acme Can Works of Montreal, passed through Toronto last Saturday on his return east from a trip through Western Canada.

Jos. Wright, of Bennett and Wright, Toronto, who sustained a severe wrench to his leg last Saturday, though still under the doctor's care, is progressing favorably.

H. N. Joy, of the Joy Manufacturing Company, stove manufacturers, Toronto, received serious injury to his head while skating on New Year's night. He is recovering slowly.

T. E. Ransley, representing Greene, Tweed Company, New York, manufacturers of Palmetto packing, attended the conference of Canadian Fairbanks salesmen in Toronto this week.

Mount Forest has decided not to abolish the Water Commission, of which W. G. Scott, hardware merchant, is a leading member. The vote took place at the municipal elections last Monday.

Alderman Samuel Stevely, hardware merchant, and Alderman Wm. Scarlett, of Wortman & Ward, woodenware manufacturers, London, were elected in the municipal elections in that city last Monday.

O. M. Hodson, Toronto representative of H. R. Ives & Company, Montreal, spent several days in Montreal last week, conferring with other salesmen and managers of the company. George Davidson, Woodstock, and Frank Griffin, Stratford, were the other Ontario men at the meeting.

Frank Adams, who has filled the position of secretary for the Peterborough Lock Manufacturing Co. for the past thirteen years, and who severs his connection with that company this week, was last Saturday made the recepient of a handsome gold watch from the directors of the company.

A. G. Buckham, manager of the retail department of the Hudson Bay Company's store at Winnipeg, was a caller on Hardware and Metal in Toronto during the past week. Mr. Buckham reports a very good holiday business in Winnipeg. He has been visiting his old home at Brampton, Ont.

Will Cluff, of Cluff Bros., Ontario selling agents for Warden King & Son, Montreal, met with a rather serious accident a few days ago. While operating his automobile the crank backed up on him and while not breaking any bones, tore the ligament of the arm and put it out of service for two or three weeks time.

Andrew Riddell, stove dealer and plumber, St. Catharines, was re-elected mayor of that city last Monday by about 400 majority. The contest was a very keen one, owing to political disagreements, but Mr. Riddell was supported by the leading Conservatives, as well as Liberals. Mr. Riddell was a visitor in Toronto on Wednesday.

J. Taylor Webb, manager of the Winnipeg branch of the Thos. Davidson Company, Montreal, was a caller on Hardware and Metal, on Tuesday. Mr. Webb is an enthusiastic westerner, and has boundless faith in the trade possibilities of Western Canada. He has been attending a staff conference at Montreal, and incidentally renewing old acquaintanceships in Toronto.

Quebec.

Adolphe Huot, Sorel, was in Montreal during the week.

Geo. Larose, Beloieuil, Que., was seen in Montreal this week.

N. McGillis, of Lancaster, was a visitor in Montreal during the week.

A. G. Eastman, Sutton, Que., was in Montreal on business a few days ago.

O. Pauze, L'Epiphanie, was a visitor at some of the Montreal wholesale houses.

N. Curry, of Rhodes, Curry & Co., Amherst, N.S., was in Montreal during the week.

J. D. McBride, Cranbrook, B.C., is in Montreal, looking up the jobbers with whom he does business.

H. R. Picketts, of Emerson & Fisher, St. John, N.B., has joined the traveling staff of Lewis Bros., Montreal.

J. W. Harris, of J. W. Harris Co., Montreal, who has been confined to the house through illness, has returned to his desk.

R. B. Cherry, representing Sargent & Co., manufacturers of builders' hardware, New York, is calling on the Montreal jobbers.

Mr. Smith, of the Pike Manufacturing Co., Pike, N.H., manufacturers of sharpening stones, is in Montreal on business for his house.

The Canadian branch of The Gillette Safety Razor Co., who were burned out lately, have opened up an office in the Mortimer Building, 2 St. Antoine St., Montreal, where all correspondence should be addressed in future.

G. M. Edwards, of Henderson & Potts, paint manufacturers, Montreal, who has been suffring lately from nervous prostration, has returned from a trip to Boston, where he has been trying to forget business worries.

M. Purvis, of Calgary, spent a few days in Montreal, and, like all western men, speaks most highly of the latter city, but prefers the beautiful climate and pure "ozone" of his western home. He has his office in Calgary with Lintan and Hall.

H. G. Hollis, manager of the New York branch of the Lufkin Rule Co., was a visitor at the Montreal office of Hardware and Metal. Mr. Hollis, although he claims to be 60 years of age, doesn't look the part, is still hale and hearty, and "one of the boys."

Western.

The wife of Louis Moody, general manager of the Canadian Brass Works, Winnipeg, died on Jan. 2nd at that place.

Mr. McKean, foreman in the heavy hardware department of Geo. D. Wood & Co., Winnipeg, was waited on by the members of his department and presented with a handsome gold locket, suitably engraved as a token of the universal esteem and respect in which he is held by his associates.

T. Arthur Kennedy, Winnipeg City, traveler for the McClary Manufacturing Company, before leaving on a trip for the East last week, was waited on by the members of the office and warehouse staff, and after an appropriate address, he was presented with a handsome oak Morris chair.

Markets and Market Notes

(For detailed prices see Current Market Quotations, page 70.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Iron Pipe—Advanced.
Turpentine—Two cents higher.
Enamelware—New lists show advance.

TORONTO.

Plumbers' Enamelware — Ten per cent. advance.
Iron Pipe—New lists show advances.
Lead Traps and Bends—Advanced to 40 off.
Hot Water Boilers—No immediate change.
Boiler Pitts — Advanced from 35 to 25 per cent.
Furnaces—Five per cent. higher.
Registers—Advanced 5 per cent.
Kitchen Enamelware—Prices withdrawn.
Shovels—Advanced $1 doz. on net price.
Step Ladders—Advanced 1c. per ft.
Rivets and Burrs—Advanced to 25 per cent.
Copper Bottom Boilers and Kettles—Advanced 5 per cent.
Copper Pitts—Advanced 5 per cent.
Factory Milk Cans—Advanced 5 per cent.
Old Material—Several advances.

Montreal Hardware Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, Jan. 11, 1907.

With the colder weather, business has picked up considerably, and the American travellers are beginning to find their way to our side of the border.

Dealers who place their orders for Spring goods early, are likely to save themselves quite a lot of cash and worry, as manufacturers are away behind in their deliveries, and prices on all lines are expected to go considerably higher within the near future.

Cow ties and sleigh bells are reported among the slowest movers this week.

Sporting goods have also quieted down slightly to what they have been during the holidays.

New prices are daily looked for on building paper.

Wire nails remain firm, but an advance in the price of horse nails is expected shortly.

It is also rumored that steel squares and planes (Stanley's), are in line for an advance.

AXES.—We quote: $7.60 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen. follows: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34-inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS. — Our prices are: "Prism" globes, $1.20; Cold blast, $6.50; No. 0, Safety, $4.00.

COW TIES AND STALL FIXTURES are moving but slowly. We still continue to quote: Cow ties, discount 40 per cent. off list; stall fixtures, discount 35 per cent. off list.

SLEIGH BELLS.—There has been a slight falling off during the past week. Our prices still remain as follows: Back Straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50; pear shape, $1.15 to $2; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

RIVETS AND BURRS. — Copper rivets and burrs advance slightly. Following are the quotations: Best iron rivets, section, carriage, and wagon box black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 25 per cent. off, and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 15 per cent., subject to usual charge for half-pound boxes.

HAY WIRE.—Prices remain firm. Our quotations are: No. 13, $2.55; No. 14, $2.65; No. 15, $2.80; f.o.b. Montreal.

MACHINE SCREWS.—Trade is about as usual. We quote: Flat head, iron, 35 per cent.; flat head, brass, 35 per cent.; Felisterhead, iron, 30 per cent.. Felisterhead, brass, 25 per cent.

BOLTS AND NUTS—Scarce. Our discounts are: Carriage bolts, 3 and under, 60 and 10; 7-16 and larger, 55 p.c.; fancy carriage bolts, 50 p.c.; sleigh shoe bolts, ⅝ and under, 60 per cent.; 7-16 and over, 50 per cent.; machine bolts, ⅝ and under, 60 per cent.; 7-16 and larger, 55 per cent.

HORSE NAILS.—Advance expected shortly. Discounts are as follows: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS.—The market is now firm at $2.30 per keg base f.o.b. Montreal.

CUT NAILS—We continue to quote: $2.50 per 100 lbs.; M.R.M. Co., latest, $2.30 per keg base, f.o.b. Montreal.

HORSESHOES. — Our prices are: P.B. new pattern, base price, improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 lbs. More than three sizes, 25c. per 100 lbs. extra.

BUILDING PAPER.—New prices expected daily.

CEMENT AND FIREBRICK.—No change in prices. We are still quoting: "Lehigh" Portland in wood, $2.54, in cotton sacks, $2.39; in paper sacks, $2.31. Lefarge (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American $30 to $35; White Bros.' English cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN.—Last week's advance still holds. We are quoting as follows: 5-16 inch, $4.40; 3-8 inch, $3.90; 7-16 inch, $3.70; 1-2 inch, $3.50; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.20; 7-8 inch, $3.10; 1 inch, $3.10.

SHOT—Our prices remain as follows: Fhot packed in 25-lb. bags, ordinary drop AAA to dust, $7 per 100 lbs.; chilled, No. 1—10, $7.50 per 100 lbs.; brick and seal, $8 per 100 lbs.; ball, $8.50 per 100 lbs. Net list. Bags less than 25 lbs., ½c. per lb. extra, net; f.o.b. Montreal, Toronto, Hamilton, London, St. John, Halifax.

AMMUNITION—The normal business is being done. Our prices are: Loaded with black powder, 12 and 16 gauge, per 1,000, $15; 10 gauge, per 1,000, $18; loaded with smokeless powder, 12 and 16 gauge, per 1,000, $20.50; 10 gauge, $23.50.

GREEN WIRE CLOTH.—We continue to quote: In 100 foot rolls, $1.62½ per hundred square feet, in 50 feet rolls, $1.67½ per hundred square feet.

Toronto Hardware Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Jan. 11, 1907.

Jobbers report a great falling off in business during the last week, as many hardware merchants are taking stock. All orders being booked now are for Spring shipment. A great number of merchants were caught on the advance in building paper, and the number of advances which have so rapidly taken place will help the tendency to order goods farther ahead.

A number of minor changes are quoted this week, with a probable further advance in a great many lines. Copper rivets and burrs advanced from 27½ per cent. to 25 per cent. with the market in a very unsteady condition and

further advance looked for. Screws are also advancing, but to what extent is not yet known. Step ladders have also advanced 1c. per foot, and are now quoted at 12c. All shovels have advanced $1.00 per dozen on list price, with further advance likely in the near future.

Quotations on all enamelware have been withdrawn. Japanned ware has advanced 5 per cent., copper pitts from 33 1-3 per cent. to 25 per cent., copper bottom tea kettles and boilers from 35 to 30 per cent., and factory milk cans from 40 to 35 per cent. Furnaces and registers have also been advanced 5 per cent. as reported in our metal markets.

AXES AND HANDLES.—Travellers are booking orders for Fall shipment.

GARDEN TOOLS.—While these various lines have nearly all been booked for Spring shipment, quite a number of orders are being received from merchants who had not ordered. An advance is expected.

WASHING MACHINES, ETC. — It is expected more washing machines will be sold this year than ever before, as so many different lines are on the market, a great number of which will be found highly satisfactory. Wringers of Canadian make have so greatly improved of late, that large orders are coming in, business in this line greatly increasing.

SPORTING GOODS.—While the last week very few orders have been received, cold weather will greatly enliven that line.

CHAIN—We still continue to quote: 5/16 in. $3.50; 9-16 in., $3.55; 1/2 in., $3.60; 7-16 in., $3.85; 3-8 in., $4.10; 5-16 in. $4.70; 1-4 in. $5.10.

RIVETS AND BURRS.—An advance has been made on these articles, which are now quoted at 25 per cent. for copper and 60, 10 and 10 for iron and tinned.

SCREWS.—Are advancing, but figures are not yet obtainable.

BOLTS AND NUTS.—Demand is very good, but the supply is very hard to procure.

TOOLS — Carpenters' tools, hand saws, etc., are in great demand, merchants buying largely in view of a further advance.

SHOVELS.—Not much doing at present, but a banner year is reported in the sale of snow shovels.

LANTERNS.—Very little demand at present, as most merchants are stocked up.

EXTENSION AND STEP LADDERS — An advance is quoted on step ladders, which are now 11c. per foot for 3 to 6 feet, and 12c. per foot for 7 to 10 foot ladders. Waggoner extension ladders, 40 per cent.

POULTRY NETTING—We quote: 2-inch mesh, 19 w.g., discount 50 and 10 per cent. All others 50 per cent.

WIRE FENCING.—All galvanized and plain wire is selling very briskly, even at advanced prices.

OILED AND ANNEALED WIRE — (Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS.—No further advance on nails is yet to hand. Stocks are rapidly being repleted.

CUT NAILS—We quote $2.30 base f.o.b. Montreal, Toronto 20c higher.

HORSENAILS—"C" brand, 40, 10 and 7½ off list. "M.R.M." brand, 55 per cent. off. "Monarch" brand, 50 and 7½ off. "Peerless," 50 per cent. off.

HORSESHOES—Our quotations continue as follows: P.B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toeweight, all sizes 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per 100 lbs. extra; more than three sizes in a keg, 25c. per 100 lbs. extra.

BUILDING PAPER.—Orders are now being booked at the advanced price for Spring shipments.

CEMENT—We quote: For carload orders, f.o.b. Toronto, Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Portland, $2.05 upwards.

FIREBRICK—English and Scotch fire brick $27 to $30; American low-grade, $23 to $25; high-grade, $27.50 to $35.

HIDES, WOOL AND FURS.—The supply of hides is in excess of the demand but the course of the market is uncertain. Prices are slightly lower than a week ago.

HIDES, WOOL AND FURS—There are lots of hides coming in, and the market is pretty steady. Nothing is doing in wool, and very few furs are coming. There seems to be a shortage of furs, or the trappers are very late getting to work. Mink is very scarce, and lynx and fox and skunk are also advanced.

Montreal Metal Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, January 11, 1907

Everywhere, we get the same report, business excellent, with no appearance of a let-up, in the near future, at least.

Copper remains unchanged with the market very firm.

Ingot tin weakened slightly during the week, but this was presumably only a fluctuation, as the metal is again back at its old figures.

Zinc spelter shows an advance of 25 cents per 100 pounds over last week's quotations.

Galvanized and black sheets are very firm. All the makers are so full of orders, that it will be difficult to get anything like prompt deliveries next Spring.

COPPER.—Remains unchanged. Market very firm with an advance in the near future. We quote: Ingot copper, 26c to 26½c; sheet copper, base sizes. 34c.

INGOT TIN.—This metal weakened slightly during the week, but is again back at the old figures. We still quote: 46½ to 47c. per pound.

ZINC SPELTER.—Shows an advance of 25 cents per 100 pounds over last week's quotations. Our figures now are: $7.50 to $7.75 per 100 pounds.

PIG LEAD. — No change over last week's prices. We still quote: $5.50 to $5.60 per 100 pounds.

ANTIMONY—Our price remains 27¼ to 28 cents per pound.

PIG IRON.—Remains the same. Our prices are: Londonderry, $24.50; Carron, No. 1, $24.50; Carron, special, $23.50; Summerlee. No. 2. selected, $25.00; Summerlee. No. 3, soft, $23.50.

BOILER TUBES.—Still hold at last week's advance. We quote: 1½ to 2 inch, $9.50; 2¼ inch, $10.35; 2½ inch, $11.50; 3 inch, $13.00; 3½ inch, $17.00; 4 inch. $21.50; 5 inch, $45.00.

TOOL STEEL—Stocks are moving very freely. We quote Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Hardening," 65c. per pound; Conqueror, 7½c.; Conqueror high speed steel, 60c.; Jowitt's Diamond J., 6¼c. to 7c.; Jowitt's best, 11c. to 11½c.

MERCHANT STEEL.—Our prices are as follows: Sleigh shoe, $2.25; tire, $2.40, spring, $2.75; toecalk, $3.05; machinery iron finish, $2.40; reeled machinery steel, $2.75; mild, $2.25 base and upwards; square harrow teeth $2.40; band steel, $2.45 base. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING — Recent advance still holds good. Present prices are: 3-16 inch to ¼ inch, $7.25; 5-16 inch to 11-32 inch, $6.20; ⅜ inch to 17-32 inch, $5.15; 9-16 inch to 47-64 inch, $4.45; ¾ inch to

17-16 inch, $4.10; 1½ inch to 3 inch, $3.75; 3⅛ to 3 7-16 inch, $3.92; 3½ inch to 3 15-16 inch, $4.10; 4 inch to 4 7-16 inch, $4.45; 4½ inch to 4 15-16 inch, $4.80. This is equivalent to 30 per cent. off list.

GALVANIZED IRON.—Firmness prevails in the market. We are still quoting Queen's Head, 28 gauge, $4.60 to $4.85; 26 gauge, $4.45; 22 to 24 gauge, $3.90; 16 to 20 gauge, $3.75; Apollo, 28 gauge. $4.45 to $4.70; 26 gauge, $4.30; 22 and 24 gauge, $3.75; 16 and 20 gauge, $3.60; Comet, 28 gauge, $4.45 to $4.70; 26 gauge, $4.30 to $4.45; 22 and 24, gauge, $3.75 to $4.00; $16 to 20 gauge, $3.60 to $3.85; Fleur-de-Lis, 28 gauge, $4.45 to $4.70; 26 gauge, $4.30; 22 and 24 gauge, $3.75; 16 to 20 gauge, $3.60; Gorbals "Best Best," 28 gauge, $4.45; Colborne Crown, 28 gauge, $4.45; 26 gauge, $4.30; 24 gauge, $3.75. In less than case lots, 25c extra.

OLD MATERIAL—We quote: Heavy copper, 19c per lb.; light copper, 16c per lb.; heavy red brass, 16½ to 17c per lb.; heavy yellow brass, 14c per lb.; light brass, 10 to 10½c per lb.; tea lead. 4c per lb.; heavy lead, 4¼c per lb.; scrap zinc, 4c per lb.; No. 1 wrought, $16.00 to $17.00 per 100 lbs.; No. 2 wrought, $6.00 per 100 lbs.; No. 1 machinery, $17.00 per 100 lbs.; stove plate, $13.00 per 100 lbs.; old rubber, 9½c per lb.; mixed rags, 1 to 1¼c per lb.

Toronto Metal Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Jan. 11.1907

Price changes this week are few, the only one to report in sheet, bar or ingot metals being a decline of a cent in ingot tin. Boiler pitts, however, have advanced from 35 to 25 per cent. and several advances have been made in old material, notably in copper, brass, lead and rubber.

Another important change is an advance of 5 per cent. on furnaces and registers, a uniform discount of 45 per cent now covering furnaces and 70 per cent. on registers. Stoves and hot water boilers remain unchanged.

Conditions are similar to those of a week ago. Stock taking is interfering with business, only a seasonable trade being done. Prices remain firm, however, with the exception of ingot tin.

To add spice to the market this week, that old story of the United States Steel Company establishing a Canadian plant at Sandwich has been revived. It is said that 1,000 acres has been bought, and work will be commenced within a week. Most men in touch with the metal markets will take these reports with a grain of salt, however, as the advantages of the corporation coming into the Canadian field are far from apparent. They already have a fair chance after structural steel business, they can ship in tin plate free and the British preference on black and galvanized sheets only amounts to about 3 per cent. when freight rates are deducted. Until work on the new plant has actually commenced, Canadian producers need not get excited over the possibilities of increased competition.

PIG IRON.—Hamilton, Midland and Londonderry are off the market, and Radnor is quoted at $33 at furnace. Middlesborough is quoted at $24.50, and Summerlee, at $26 f.o.b., Toronto.

BAR IRON.—Bar continues hard to get and we still quote: $2.30, f.o.b., Toronto with 2 per cent. discount.

INGOT TIN.—Weakness has developed, and we now quote 45 to 46 cents per pound.

TIN PLATES—Market continues active and prices firm at recent advances.

SHEETS AND PLATES.—Apollo galvanized sheets have been advanced ten cents, and are now quoted at $4.70 for 10 3-4 ounce. Active buying is reported with prices steady. Stocks are light.

BRASS.—We continue to quote: 27½ cents per pound for sheets.

COPPER.—Conditions are unchanged. Stocks are low, buyers need supplies, and prices are very stiff. We now quote: Ingot copper $26 per 100 lbs., and sheet copper $31 to $32 per 100 lbs.

LEAD—Market is active and prices very firm. We quote: $5.40 for imported pig and $5.75 to $6.00 for bar lead.

ZINC SPELTER—Stocks continue light with market firm and active. We quote 7½c. per lb. for foreign and 7c. per lb. for domestic. Sheet zinc is quoted at 8 1-4c. in casks, and 8 1-2c. in part casks.

BOILER PLATES AND TUBES—We quote: Plates, per 100 lbs., ¼ in. to ½ in., $2.50; ⅝ in., $2.35 heads, per 100 lbs., $2.75; tank plates, 3-16 in., $2.65; tubes, per 100 feet, 1¼ in., $8.50; 2, $9; 2 1-2, $11.30; 3, $12.50; 3 1-2, $16; 4, $20.00. Terms, 2 per cent. off.

ANTIMONY—Market is active, and stocks scarce. Prices firm at 27c. to 28c.

OLD MATERIAL.—Dealers' buying prices still continue as follows: Heavy copper and wire, 19 cents. per lb.; light copper 17c. per lb.; heavy red brass, 17c. per lb.; heavy yellow brass, 14½c per lb.; light brass 11c. per lb.; tea lead, $3.75 per 100 lbs.; heavy lead, $4.10 per 100 lbs., scrap zinc, 4½ per lb.; iron No. 1 wrought, $14.00; No. 2 wrought, $6 to $8; machinery cast scrap, $16.50 to $18; stove plate, $13 to $14, malleable and steel, $8; old rubbers, 9½c. per pound; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL.—We continue to quote:

Standard Hocking soft coal f.o.b. at mines, lump $1.75, ¾ inch, $1.65, run of mine, $1.40, nut, $1.25; N. & S. $1.10; P. & S., 85c.

Youghiogheny soft coal in cars, bonded at bridges; lump, $2.90; ¾ inch, $2.70; mine run, $2.60; slack, $2.25.

United States Metal Markets

From the Iron Age, Jan. 10, 1907.

The monthly pig iron statistics collected by The Iron Age show that the output of the coke and anthracite furnaces was 2,236,153 gross tons in December, as compared with 2,187,665 tons in November. The production of the steel works furnaces has broken all records, having reached 1,163,635 tons in December. However, the outlook for maintaining the December output during the current month is not very promising, since the capacity of the furnaces in operation declined from 513,860 tons per week on December 1 to 507,397 tons per week on January 1, 1907.

Scarcity of spot iron is still a marked feature in all the leading pig iron markets, and promises to continue so for some time unless weather conditions are very favorable and transportation facilities improve very materially. The majority of buyers continue to have a good deal of confidence in the second half of the year, but it is only fair to state that an increasing number of consumers have determined to await developments, in view of the high prices prevailing. Sellers generally are very firm, but there are instances cropping up of inducements being made to book orders for delivery during the second half.

In the central west some pretty large orders for foundry iron will probably be placed at an early date, this including 15,000 tons for a pipe founder and 10,000 tons for a machinery manufacturer. The negotiations for a large tonnage for an agricultural implement interest have not yet come to a head. In the East there have been some additional large sales of basic iron at high prices, but otherwise pig iron consumers are growing conservative as to forward deliveries.

In some quarters specifications for structural shapes are not coming in fast enough to employ the full capacity of the mills, thus affording a welcome opportunity to divert the steel into other channels. The eastern plate makers have advanced prices $2 per ton.

A moderate amount of structural work has been placed, this including 8,000 tons of bridge work for the New York Central, and 1,500 tons for the Louisville & Nashville road.

An interesting transaction is the sale of a 5,000-ton lot of steel bars for a reinforced concrete building for a Chicago catalogue house. This is the largest contract for concrete bars yet placed

From the Iron Trade Review, Jan. 10, 1907.

While the iron buying movement continues extremely heavy in all sections of the country, there are indications of easier conditions, particularly in the east. The Chicago market is still much excited, though all the merchant furnaces in that district have sold two-thirds of their 1907 make. Southern iron is firm with an advancing tendency and deliveries very poor. In New York, Pittsburg and other eastern centres comparatively little iron is being pur-

chased, and concessions are reported on a large purchase of foundry grades. The supply of foreign iron is increasingly scarce, and occasionally foundrymen are compelled to close for a few days at a time. If the market is any less strong it is because of the fact that buyers have ordered far in advance and presents nothing that is alarming.

In certain finished lines easier conditions also prevail. A number of Indiana mills in their eagerness for business have cut prices on bar iron from $4 to $5 per ton below those heretofore prevailing. Quotations of the larger producer are unchanged. Structural materials which so far have constituted the only weak factor of the market are in such light demand that the Illinois Steel Company now operates its mill every alternate week on billets. To counterbalance these facts, however, improvement is noted in a number of lines. San Francisco has finally become an important buyer of building materials, having placed orders for 7,000 tons since January 1, with other large contracts pending. December sales of the American Bridge Company were the heaviest of the year with one exception, and the sales of the year aggregated 660,000 tons. Important bridge and building contracts are shortly to be closed.

An eastern manufacturer, catering to prompt delivery, has announced another advance on plates of $2 per ton, making his price $2.10 Pittsburg, as against $1.60 Pittsburg, quoted by the leading producer. Sheets are strong and firm by reason of the high price of spelter. The American Sheet & Tin Plate Company during the past year shipped in the neighborhood of 1,250,000 tons of sheet products, or 20 per cent. more than 1905.

Eastern furnace interests, unable to secure Lake Superior ore for the coming season, have resorted to foreign ore for which heavy tonnages have been contracted, and will also use local eastern ores. At the close of navigation the amount of ore on Lake Erie docks was about 200,000 tons less than the corresponding period of 1905.

London, Eng., Metal Markets

From Metal Market Report, Jan. 10, 1907.

Cleveland warrants are quoted at 60s. 3d., and Glasgow Standard warrants at 56s. 6d., making price as compared with last week 1s. 7½d. lower on Cleveland warrants, and 1s. 6d. lower on Glasgow Standard warrants.

TIN.—Spot tin opened firm at £190 10s., futures at £191, and after sales of 320 tons of spot and 900 tons of futures closed weak at £189 5s. for spot, £189 15s. for futures, making price compared with last week £4 5s. lower on spot and £4 15s. lower on futures.

COPPER—Spot copper opened steady at £106 5s., futures £107 5s., and after sales of 300 tons of spot and 400 tons of futures, closed easy at £106 2s. 6d. for spot, and £107 2s. 6d. for futures, making price compared with last week 17s. 6d. higher on spot and 10s. higher on futures.

LEAD—The market closed at £19 15s., making price as compared with last week 3s. lower.

SPELTER—The market closed at £27 15s., making price as compared with last week unchanged.

N.B. Hardware Trade News

St. John, Jan. 7.

Is there to be a time of marked industrial development in St. John in the near future? The city's growth has been slow of late years, comparatively speaking, but there have been intimations recently that new industries are shortly to come into being. Reference was made in the last issue of Hardware and Metal to the fact that rumor has had it that the Maritime Nail Works concern is contemplating the erection here of a plant much larger than that it is now using. One story has been that the talked-of plant was to be devoted largely to the manufacture of horse shoe nails. Another was that the new works were to be of the rolling mill variety. Mr. S. E. Elkin, of the Maritime Company, has denied the truth of reports. Now comes the story, on good authority, that he has secured control of the whole of a large stock of land on what is known as the Marsh Road? What the purpose of this move may be one cannot say. Your correspondent has been informed, however, that Mr. Elkin in seeking a site, is not acting for the Maritime Nail Works Company, as such, though members of the company may be connected with the syndicate for which he is carrying on negotiations.

Another deal about which there is considerable speculation went through a few days ago. At that time a lawyer secured a Leicester Street property for unknown persons. This move, it is generally believed, is taken with a view to establishing a manaufacturing industry.

A New Brunswick company that is apparently prospering is the New Brunswick Wire Fence Company, Limited. At their recent annual meeting the directors of the company received excellent reports showing a remarkable growth in business during 1906. Very shortly a new wire weaving machine is to be installed in the company's works. A large annex for warehouse purposes is now being built. Other additional warehouse space and more new machinery, will probably be necessary ere long. The directors for 1907 are: Dr. C. A. Murray, Hon. C. W. Robinson, A. C. Chapman, F. W. Givan and J. T. Hawke, all of Moncton. They have elected Dr. Murray president, Mr. Givan vice-president, and Mr. Chapman, secretary and manager.

It is the same old story asa regards prices, firmness and a tendency to further increase. Ingot tin is at a record making figure; wire and cut nails have taken another jump upwards; brass is quoted at a stronger figure; lead is still at an exceptionally high figure. There is no need to go on. The general statement is sufficient, prices are continuing at remarkable positions. Not for years has there been such a condition of affairs. In some quarters the opinion prevails that a general revision of prices is soon to come here as elsewhere.

The effect of the new tariff on the cordage business is not looked forward to with any degree of complacency by the dealers. The ruling has made the conditions surrounding this branch of trade decidedly uncertain. The free admission of ropes for fishing purposes makes a condition of unsettledness, and opens the way for a variety of difficulties. Then, too, the question comes up: will the new regulations give the United States cordage people too great an advantage?

George McAvity is one of the incorporators of the Dominion Car and Foundry Company, Montreal.

N.S. Hardware Trade News

Halifax, N.S., Jan. 8, 1907.

The hardware trade is very quiet at present. All the jobbers are now busily engaged in taking stock and it will be some time before they get things straightened out again. The weather is very unseasonable, and has a strong tendency to injure business. There is no snow in the woods, and the lumbering business is practically at a standstill. What promised to be a busy season at the outset, has received a serious set back by the weather conditions, and the outlook is not very hopeful. The prices of all lines are very firm, more particularly so with metals, which have an upward tendency. Ingot tin and tin plates are higher now than they have been for some time, and quotations on Paris green are fully 30 per cent. higher than at the same time last year. White lead and all wire products have been advanced by the manufacturers, and it is expected that nails will go still higher. Zinc has been advanced nine cents per cask.

The poor condition of the ice since the opening of the New Year, has caused a marked falling off in the sales of skates, and there is little or no demand for horse shoers' supplies, the streets and roads being entirely free from ice. All the big industries of the province seem to have large orders on hand, and the relighting of the Nova Scotia Steel Company's blast furnaces at Sydney Mines will have good results.

James Simmonds & Co.'s hardware store at Dartmouth, N.S., was damaged by fire last week and the stock was damaged to the extent of $2,574 from water. The members of the firm are very energetic, however, and business is rapidly expanding. The fire did not

interfere to any extent with the business, as they made prompt arrangements to fill all the orders on hand.

Calgary Hardware Trade News

Calgary, January 5, 1907.

Dealers here all report a brisk Christmas trade. Local stores made good displays of seasonable stock and reaped the advantage. Special mention may be made of Messrs. Ashdown's display of cutlery and table plate, which by its magnificence suggested a jeweller's store.

The building trade continues busy here, and the demand for the various supplies is consequently brisk. First in importance as regards size and cost, among the jobs under way, is the new Normal School. The British Columbia General Contract Company, who have the contract for the school have just completed a large extension of the C. P.R.'s local machine shop. Built substantially of stone and internally arranged in accordance with the latest designs of the company's engineers, the enlarged shops should enable the daily increasing work to be handled more expeditiously.

Messrs. MacFarlan & Northcott are rapidly getting their new store into shape for business. Unlike the other hardware stores in the city which are all within a radius of a few hundred yards east, their new premises are situated on Eighth Avenue West. With a double window frontage, the interior shows a commodious space for the convenient storage of retail articles, while back premises give accommodation for the heavier branches of the trade. Messrs. MacFarlan and Northcott are also agents for the MacLaughlin carriages.

The reconstruction of the big cement plant in the east of the city is being rapidly pushed on. Mr. Butchart reports the work as nearly completed, but complains of the shortage of labor.

London Hardware Trade News

The elaborate preparations made by the Commercial Travellers' Club of London, for the ball on the 11th inst., gave some indication that the event would be the most successful in the history of the club. Every season this affair is looked upon as one of the greatest events in the city's social life, and this season was no exception. The subscription list was closed more than a week in advance, when an attendance of about 500 was assured. By a specially constructed passage way from the second story of the City Hall to the second story of the Masonic Temple, the two buildings were as one, practically, for the occasion. The decorations of the City Hall gave the suggestion of a big marquee and the same idea was carried out in the decoration of the banqueting hall in the Masonic Temple. Red and black—the club colors—were generously used in the decorating. The officers of the Club are: Hon. C. S. Hyman, Hon.-Pres.; H. E. Buttrey and Donald Ferguson, Hon. Vice-Pres.; C. W. McGuire, President; J. A. Townsend and George Detlor, Vice-Presidents; J. J. Harkness, A. H. Brener, L. C. Johnston, H. W. Lind, A. H. Moran, J. M. Ferguson, T. W. Edwards and F. S. Fisher, members of the Executive Committee. The gentlemen who had in charge the arrangements for the ball were: F. S. Fisher, Honorary Chairman; H. W. Lind, Honorary Secretary; S. F. Glass, convenor, Accommodation and Halls Committee; J. M. Ferguson, convenor, Reception Committee; J. A. Carling, convenor, Refreshment Committee: H. C. McBride, convener, Printing Committee; J. A. Townsend, convener, Finance Committee; A. Tillmann, convenor Decoration Committee, and J. J. Harkness, convener Music Committee. To these be the credit.

CONFERENCE OF TRAVELERS.

About forty managers of branches and traveling salesmen, representing the Canadian Fairbanks Company throughout Canada, have been in conference in Toronto during the past week, their programme being very instructive to all who participated, including both addresses by men who had been successful in manufacturing and selling the Fairbanks lines, and visits to several of the factories where the Fairbank specialties are produced.

Monday was devoted to a discussion of the merits and best selling methods of scales, gas engines, steam specialties, and railway supplies. On Tuesday gas engines and transmission materials were taken up; a visit to the Canadian Fairbanks-Morse factory being also included. On Wednesday the delegation visited Hamilton and Dundas, to make an inspection of the methods of manufacture in operation in the John Bertram Machine Works at Dundas; the Pratt & Whitney Small Tool Factory at Dundas, and the Union Drawn Steel Co.'s works at Hamilton. Thursday was devoted to valves and steam specialties, a theatre party being given in the evening; and on Friday another trip was made to the Fairbanks-Morse factory and a general recapitulation made of the results of the week's studies.

H. J. Fuller, president of the Canadian Fairbanks Company, is an ardent advocate of conferences of selling staffs, believing that they do much to make the different individuals realize the power of concerted action as well as teaching the new men that it is their business not only to take orders, but to sell goods and know the articles they sell. Mr. Fuller is also a great believer in the "made in Canada" slogan, and is steadily increasing the number of Fairbanks lines made in this country.

Two important announcements can be made this week—one being that the scales and valves at present made by the E. T. Fairbanks Company at their factory at St. Johnsbury, Vermont, will, in future, be made for the Canadian trade at a new factory being established at Beebe Plains, Quebec, only 40 miles from the parent factory in Vermont. The other announcement is that the Canadian Fairbanks Company have contracted with the R. McDougall Co. to take over the entire product of their smaller machine tools, the contract extending for a period of 5 years. The Dart Union Co., of Providence, R.I., also intend to establish a new factory at Toronto. The Fairbanks-Morse gas engines are at present made in Toronto; pumps up to 6 inches are also made in Toronto, the larger sizes being imported, and wood pulleys are made at the Montreal factory. These lines, as well as those made in Hamilton and Dundas, are only a few of those sold by the Fairbanks representatives.

Those persons at the conference included: —

Montreal—H. J. Fuller, D. Guttridge, Gerald Robinson, G. B. Green, J. Falis, R. Miquelon, B. J. Corry, J. S. Bowar, W. S. Howe, J. McLeod, E. J. Holland, G. Drinkwater, M. P. Shea, T. E. Ryder, H. L. De Wolfe.

Toronto—C. J. Brittain, C. S. Hook, F. M. Allen, F. J. Campbell, J. G. Robinson, Geo. Robson, W. J. Sanderson, S. B. Trainer, Geo. Fisher, E. D. Hamilton, P. C. Brooks, J. S. Sanson.

Winnipeg—J. H. Crane, G. K. Tower, P. D. McLaren, A. H. Johnston, S. Jolliff.

Vancouver—G. H. Howard, R. M. Kalberg, F. W. Fisher.

St. John—G. E. Choinier.

Halifax—K. N. Forbes.

New Glasgow—F. A. Lytle.

Chicago—Mr. Jenson.

An important addition to the Montreal staff is W. S. Howe, who has just resigned his position as advertising manager of the S. A. Woods Co., of Boston, manufacturers of wood-working machinery. Mr. Howe has made a splendid reputation for himself in the Eastern States, and should make his way with the company he is now associated with.

MONTREAL FIRM INCORPORATED.

The firm of A. C. Leslie & Company has recently been incorporated under the name of A. C. Leslie & Co., with an authorized capital of $250,000.

This business, which was established by the late A. C. Leslie in 1866, is now one of the oldest in the iron, steel and metal trade in the Dominion, and the rapid growth of its business, combined with the desire to give some of their employes an interest in the business, has led to its incorporation.

No change whatever has been made in the personnel of the management, the directors and officers being as follows: William S. Leslie, president; Albert H. Campbell, vice-president; Thomas H. Jordan, director; Edward H. Copland, secretary; Frederick H. Foster, treasurer.

MANITOBA HARDWARE AND METAL MARKETS

(Market quotations corrected by telegraph up to 12 a.m. Friday, Jan. 4, 1907.)

Room 511, Union Bank Building, Office of HARDWARE AND METAL, Winnipeg, Man.

There was no change in prices in the hardware and metal trades this week with the holiday season just ended business is comparatively slack and will continue to be so for a week or two. Quotations this week are unchanged from the previous week. The trade here looks for a decided activity in business as soon as building operations are under way. Already in Winnipeg there have been several building permits for the coming year taken out and activity in building circles promises to be as pronounced, if not more so, than during the past year when the record was reached here.

LANTERNS. — Quotations are as follows: Cold blast, per dozen, $6.50; coppered cold blast, per dozen, $8.50; cold blast dash, per dozen, $8.50.

WIRE—We quote as follows: Barbed wire, 100 lbs., $2.90; plain galvanized, 6 to 8, $3.39; 10, $3.50; 12, $3.10; 13 $3.20; 14, $3.90; 15, $4.45; 16, $4.60; plain twist, $3; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS — Lists and discounts are quoted as follows: No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per pound. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS.—Quoted now at $2.70 per keg.

CUT NAILS.—As noted last week cut nails have been advanced to $2.90 per keg.

PRESSED SPIKES — Prices are quoted as follows since the recent advance: ¼ x 5 and 6, $4.75; 5-6 x 5, 6 and 7, $4.40; ⅜ x 6, 7 and 8, $4.25; 7-16 x 7 and 9, $4.15; ½ x 8, 9, 10 and 12, $4.05; ⅝ x 10 and 12, $3.90. All other lengths 25c. extra net.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows: Bolts, carriage, ⅜ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅜ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½; hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS—Discounts are quoted as follows since the recent advance in the price of copper rivets: Iron, discounts, 60 and 10 p.c.; copper, No. 8, 37c.; copper, No. 10, 40c.; copper, No. 12, 43c.

COIL CHAIN.—Prices have been revised the general effect being an advance. Quotations now are: ¼ inch $7.00; 5-16, $5.35; ⅜, $4.75; 7-16, $4.50; ½, $4.25; 9-16, $4.20; ⅝, $4.25; ¾, $4.10.

SHOVELS—Discounts on spades and shovels continue 40 and 5 p.c.

HARVEST TOOLS — Discounts continue as before, 60 and 5 per cent.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES.—Quotations are: Bench axes, 40; broad axes, 25 p.c. dis. off list; Royal Oak, per dozen, $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $8.25; Columbian, $9.50; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.75; Copper King, $11 per dozen.

BUTTS—The discount on wrought iron butts is 70 p.c.

CHURNS — The discounts from list continue as before: 45 and 5 per cent.; but the list has been advanced and is now as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

CHISELS—Quoted at 70 p.c. off list prices.

AUGER BITS—Discount on "Irwin" bits is 47½ per cent., and on other lines 70 per cent.

BLOCKS—Discount on steel blocks is 35 p.c. off list prices; on wood, 55 p.c.

FITTINGS—Discounts continue as follows: Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

GRINDSTONES—As noted last week, the price is now 1½c. per lb., a decline of ¼c.

FORK HANDLES—The discount is 40 p.c. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 p.c. off list prices.

HOOKS—Prices are quoted as follows: Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

CLEVISES—Price is now 6½c. per lb.

STOVE PIPES—Quotations are as follows: 6-inch, per 100 feet length, $9; 7-inch, $9.75.

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discount is 50 per cent.

WASHERS—On small quantities the discount is 35 p.c.; on full boxes it is 40 p.c.

WRINGERS — Prices have been advanced $2 per dozen, and quotations are now as follows: Royal Canadian, $35.00; B.B., $39.75, per dozen.

FILES—Discounts are quoted as follows: Arcade, 75; Black Diamond, 60; Nicholson's, 62½ p.c.

Warehouses CALGARY EDMONTON WINNIPEG

Our sample books of **BAS-KA-NO**—(something new in wall hangings—standard colors) and **LIN-UNA** (a high-class colored tapestry burlap—all colors), sized and oil-coated burlaps will be out in a few days. We would like to mail you one of these. Send us your orders.

Good Ceilings a Good Investment

One of our Embossed Metal Ceilings.

This is house-cleaning time in the hardware store. Why not seize the opportunity to replace your old unsightly plaster ceiling with one of embossed metal, which will put an end to your ceiling worry? These ceilings require no attention after once being applied. There will be no peeling of whitewash or dropping of plaster, and they give a tone to your store otherwise unobtainable. Your neighbors will want metal ceilings, too, and that will mean business for you.

Write us for quotations.

The Metal Shingle & Siding Co., Limited, Preston, Ont.

BUILDING PAPER — Prices are as follows: Plain, Joliette, 40c.; Cyclone, 55c.; Anchor, 55c.; pure fibre, 60c.; tarred, Joliette, 65c.; Cyclone, 80c.; Anchor, 65c.; pure fibre, 80c.

TINWARE, ETC.—Quoted as follows: Pressed, retinned, 70 and 10; pressed, plain, 75 and 2½; pieced, 30; japanned ware, 37½; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; white 45; Diamond, 50; Granite, 60 p.c.

TIN PLATES—We now quote as follows: IC charcoal, 20 x 28, box, $9.50; IX charcoal, 20 x 28, $11.50; XXI charcoal, 20 x 28, $13.50.

TERNE PLATES—Quoted at $9.

CANADA PLATES—Quoted as follows: Canada plate, 18 x 21, 18 x 24, $3.40; 20 x 28, $3.65; full polished, $4.15.

BLACK SHEETS—Prices are: 10 to 16 gauge, 100 lbs., $3.50; 18 to 22, $3.75; 24, $3.90; 26, $4; 28, $4.10.

PETROLEUM AND GASOLINE.—Silver Star in brls. per gal., 20c.; Sunlight in brls, per gal., 21c.; per case, $2.30; Eocene in brls, per gal., 23c.; per case, $2.50; Pennoline in brls., per gal., 24c.; Crystal Spray, 23c.; Silver Light, 21c.; Engine gasoline in barrels, per gal., 28c., f.o.b. Winnipeg in cases, $2.75

PAINTS, OILS & TURPENTINE — Turpentine is firm at the recent advance White lead, pure, $7; bladder putty in barrels, 2½c.; in kegs, 3¾c.; turpentine, barrel lots, Winnipeg, $1.01; Calgary, $1.08; Lethbridge, $1.08; Edmonton, $1.09. Less than barrel lots 5c. per gallon advance. Linseed oil, raw, Winnipeg, 64c.; Calgary, 71c.; Lethbridge, 71c.; Edmonton, 72c.; boiled oil, 3c. per gal. advance on these prices.

WINDOW GLASS—We quote: 16-oz. O.G., single, in 50-ft. boxes—16 to 25 united inches, $2.25; 26 to 40, $2.40; 16-oz. O.G., single, in 100-ft. cases — 16 to 25 united inches, $4; 26 to 40, $4.52; 41 to 50, $4.75; 50 to 60, $5.25; 61 to 70, $5.75. 21-oz. C.S., double, in 100-ft. cases—26 to 40 united inches, $7.35; 41 to 50, $8.40; 51 to 60, $9.45; 61 to 70, $10.50; 71 to 80, $11.55; 81 to 85, $12.60; 86 to 90, $14.75; 91 to 95, $17.30.

PROMINENT MANUFACTURER DEAD.

Hardwaremen throughout Canada will regret to learn of the rather sudden death a week ago of Leonard McGlashan, of Niagara Falls. With a party of relatives and friends he had gone to California a month ago to enjoy the milder winter climate of the Pacific coast. but on his arrival there was taken ill with typhoid fever, the disease

THE LATE LEONARD McGLASHAN.

which caused his death. Mr. McGlashan was 61 years of age and besides a widow, leaves a daughter and one son, L. Lee McGlashan, of the McGlashan-Clarke company, Niagara Falls, manufacturers of cutlery and silverware.

Mr. McGlashan was probably the wealthiest citizen of Niagara Falls and was one of the first users of power from Niagara River, besides being interested in many enterprises, including mines and railways in the southwestern states and Mexico, and was a large real estate owner. He was until recently the chief owner of the Ontario Silver Company, which had a large factory at Thorold, then at Humberstone and finally located in Niagara Falls, where it is an important industry. Mr. McGlashan sold out his interest to the International Silver Company some time ago, and since then the McGlashan-Clarke Company was formed and built the large works at Niagara Falls, which commenced operations only a month or so ago.

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade, a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

A Novel New Year's Card.

We have received from Ludger Gravel, Montreal, a New Year's greeting in the form of an aluminum post card showing a photograph of the sender, and Christmas and New Year's greetings in French and English.

Chrysanthemums.

The Guelph Stove Company have issued a beautiful calendar, it being a reproduction of "Chrysanthemums," a painting by an eminent French artist. The calendar is well worth sending for.

Desk Calendar.

The D. Moore Company, stove manufacturers, of Hamilton, have issued to the trade a very small compact desk calendar, with a cut of their works, which will be found very acceptable by all who receive a copy.

Cordage Calendar.

The Independent Cordage Co., of Toronto, have issued a beautiful calendar for 1907, which will be well received by the trade, and any person not yet receiving one should write mentioning this paper.

A Quebec Calendar.

J. McOuat & Son, hardware merchants, Lachute, Que., have supplied their customers with a very attractive calendar for 1907, a copy of which has been received by Hardware and Metal.

Capewell Horse Nail.

The Capewell Horse Nail Co. have issued a very nice calendar. Also a little booklet, containing history of this nail. Also cuts of various style heads, and sizes. Quite a number of letters from various horse-shoers throughout the country have been received claiming the superior qualities of this nail.

The Metric System.

Lord Kelvin's views on the advantage of the metric system has just been published by the Decimal Association, 605 Salisbury House, London, E.C., and can be procured for the sum of 3d. from these publishers. The book goes extensively into the explanation of the metric system, also verious uses which it is put to.

A Want Book.

The Dominion Wire Mfg. Co., of Montrea,, have issued a "Memo" book for 1907, which is bound in a neat black leather cover, with the company's trade

mark on the cover, and contains useful information, which will come in handy to any merchant dealing in wire. Copies may be obtained from the company's salesmen by mentioning Hardware and Metal.

Fairbanks' Calendar.

The Canadian Fairbanks Company, of Montreal, Toronto, Winnipeg, and Vancouver, manufacturers of valves, pipe, and fittings, etc., are sending to the trade a large 1907 calendar, with monthly sheets, containing cuts of different lines manufactured by them. This calendar should prove very useful for store or office use, as the large print makes it very plain and easily read. It will be sent free on request of anyone mentioning this paper.

Year Book for 1907.

Wilkinson, Heywood and Clark, paint manufacturers, Montreal, have issued a very useful little pocket diary and cash account book.

The book is about 3½x6 inches, is bound in a handsome red leather cover with a pocket at the back containing a pencil; it also contains much information of value to paint dealers.

This book is entirely free from advertising matter, with the exception of the firm name, which appears at the top of several of the pages.

This useful little souvenir will, while the supply lasts, be sent by the above firm to any authorized paint dealer who will mention Hardware and Metal in writing.

Ice Cream Freezers.

North Bros. Manufacturing Co., of Philadelphia, have just issued their 1907 catalogue, containing cuts of various lines of freezers made by them. A new feature is the twin freezer, which they have just placed on the market. This freezer is adapted for the making of two different flavors at one time. The can is divided into two partitions, which project above the top of the can and bears against the can lid, so that during freezing nothing can pass from one side to the other. The dasher has a central shaft which fits in the groove of the partition of the can. This dasher carried two sets of scrapers, one set filling in one side of the can and the other set in opposite side. The motion is not the same as the other models on account of the partition in can. It is therefore swung forward and backward, having a rotary motion, the motion being much handier than the old.

Art Metal Work.

The Galt Art Metal Company have issued three fully illustrated catalogues of products manufactured by them. Their Catalogue A. is about 8x12 inches, containing 56 pages, dealing particularly with different designs of ceilings, borders and corners of many kinds. Catalogue B. deals with roofing and siding, also going extensively into the correct methods of laying this roofing, while cuts of their rock, brick and corrugated siding are also displayed. Catalogue C. contains many illustrations of cornices, skylights, finials, ventilators, window caps, etc., with full instructions as to ordering these goods, measurements, etc. Any dealer who has not yet received these catalogues should write and procure them at once in preparation for the coming building season.

Western Canada Factory, 797 Notre Dame Ave., Winnipeg, Man.

Starr Skate Book.

The Starr Manufacturing Company are sending to the trade their Skate Book, which contains illustrations of various grades manufactured by them, as well as valuable information, as to the best methods of placing skates on the boots. The better known lines they manufacture are the Acme (with and without ankle supports), Regal, Mic-Mac "Starr" and Chebucto hockey, Starr tube, ladies' and gentlemen's, Beaver, Starr tube racer, and Starr racer. A new hockey skate has been put on the market known as the "Velox," combining all the good features of the other brands. This skate is meeting with a very large sale. The Starr Company also manufacture hockey sticks, and have just placed on the market two new models, with double-grooved serrated blade, which adds greatly to the shooting qualities, and strength of the stick. In the back of this catalogue will be found the rules of hockey and a table giving comparative sizes of shoes and skates.

LEWIS BROS.' BANQUET.

The travelers of Lewis Bros. staff had their annual re-union on Wednesday, Thursday and Friday of last week.

At the meeting which was held on Thursday, Dec. 27, 1906, short addresses were delivered by Messrs. Jas. G. Lewis, C. M. Strange and C. F. Smallpiece.

The banquet at the Engineers' Club on Friday evening, Dec. 28, 1906, was a great success.

All present seemed to enjoy themselves thoroughly and left with a strong determination to make 1907 the banner year in the history of the firm.

FOUNDRY AND METAL INDUSTRIES

The Pease Furnace Company of Toronto resumed work this week at their factory, after having been closed down for two weeks, for repairs and stock taking.

The Collingwood Shipbuilding Company are about to lay the keel for another big vessel. The steamer will be 490 leet long and is to be built to the order of the Farrar Transportation Company.

The Taylor, Forbes Company's foundry at Guelph suffered $5,000 damage by fire on January 6th. The fire only temporarily stopped the work in the radiator foundry, about 100 men being out of employment for about two days. The loss was fully covered by insurance.

A new fire-clay lining for stoves has been invented by Mr. Werther, formerly superintendent of the open hearth furnaces of the Dominion Iron and Steel Company. The basis of the preparation is Sydney cement, and the cost of this improved lining will be no greater than that of the ordinary iron material.

The annual banquet given by the Pratt & Letchworth Company, malleable iron founders of Brantford, was held last week, a special train bringing O. P. Letchworth, president, and friends from Buffalo, where another branch of their works is situated. The company has grown immensely since their location in 1899, and the entire output now is purely malleable. They started with about 100 men, now they employ 800, and are working night and day. The output for 1906 exceeded 15,000 tons, mostly for use in the construction of cars. The company paid over $400,000 in wages for 1906.

Samples of rock containing copper, found around the Moon River, in the district of Parry Sound, have been sent to New York for examination, and capitalists there lost no time in providing all necessary capital for thoroughly testing the find. Some of the recent assays from the present workings show well the composite character of the vein matter. They gave silver 20 ounces, copper 22 per cent., gold from $10 to $500 per ton, with values in platinum, cobalt and zinc. One of the largest crystals of mica that perhaps has ever been mined has been found in one of these mines, it being about the size of an ordinary door, and required no less than four drill holes to dislodge it. The mica found, though dark in color, contains no iron, and improved in quality with depth.

The year just closed has proved a record one for the output of coal from the collieries of the Nova Scotia Steel and Coal Co., no less than a total of 688,085 tons being raised from three mines. No. 3 led, with a total output of 390,126 tons, No. 1 being second with 257,467, and No. 5, 40,492 tons. Both Nos. 1 and 5 collieries worked single shift, while No. 3 worked double shift and is machine-mined. The total output from the company's collieries at Sydney for the year 1905 was 558,306 tons, and it is the intention of the management to increase last year's output by reaching the million mark for 1907. The output for 1907 is expected to be the largest in the history of the company.

A daily newspaper quotes a director of the Lake Superior Corporation as saying: Notwithstanding the taking off of the bounty July 1, the net earnings for four months since the close of the fiscal year have been fully equal to those for the corresponding period in 1905. The restored bounty went into effect January 1, 1907, and from then on the company receives the benefit, which should still more favorably affect the business as compared with that of a year ago. The steel rail tonnage has been running about 15,000 tons a month and all the subsidiary companies operated, with the exception of one trolley line, are contributing something to the net revenue, as they are all earning their fixed charges and something besides.

The Sherwin-Williams Agent Builds Up a Permanent Trade that Competition Cannot Take Away.

The foundation and keynote of our wonderful growth and the splendid success of our agents is *quality*. Take away all other advantages of ***The Sherwin-Williams Agency*** save quality and you have the strongest paint and varnish proposition ever offered a dealer. We make the best paints and varnishes we know how to make and the quality of our products wins the customer's confidence and future trade.

Add to this the strongest and most effective selling and advertising helps ever originated to assist the dealer in moving the goods from his shelves and you have the secret of results that has made us the largest concern in our line in the world and our agents the most successful paint and varnish dealers in the country. Write us today for complete details of our proposition.

BIG FIRMS AMALGAMATE.

Particulars of the amalgamation of the Canada Screw Company, established 1866, and the Ontario Tack Company, established in 1887, two of Hamilton's largest industries, have been announced. Nearly $2,000,000 is involved in the deal. The plants of both concerns are to be considerably enlarged and new lines added to their products. Application has been made for a new charter in which the capital stock will be greatly increased in order to allow for the extension of the works.

The new company will be known as the Canada Screw Co., and the officers will be: Cyrus A. Birge, president; Chas. Alexander, vice-president; F. H. Whitton, general manager; W. F. Coote, secretary-treasurer; James O. Callaghan, director of works. The other directors will be Hon. Senator Gibson and Charles S. Wilcox.

COPPER KING COMING.

It is stated that Senator W. A. Clark, of Montana, the great copper king, will shortly visit Montreal and Quebec in company with his wife. Mrs. Clark, whose maiden name is Lachapelle, is of French-Canadian descent, and has many relatives in Quebec Province.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

Winter doesn't stop building in Canada as is intanced by the large number of permits for new buildings which have been issued during December and the present month in all parts of Canada. For instance, in Toronto alone permits issued totalled to $961,000 in December and from Jan. 1 to 8 the amount was $367,000. The figures given by us in this issue in several cases cover the totals for the past year and are gratifying from every standpoint. Even more pleasing, however, is the certainty that 1907 will show even larger totals than the big records made in 1905 and 1906.

London defeated the waterworks by-law.

Bolton will raise $2,500 for cement walks.

Harriston voted to raise money for school purposes.

The new Normal School at Hamilton will cost $50,000.

Thorold carried a waterworks by-law by a majority of 12.

Paris defeated a by-law to raise $12,000 for school purposes.

A new Public Library will be built at Toronto at the cost of $250,000.

Windsor defeated a $12,000 by-law to improve the electric light plant.

Lindsay defeated the waterworks filtration by-law by a large majority.

Collingwood defeated by-laws to build a new public school and a fire hall.

Mount Forest defeated a by-law to abolish the Water and Light Commission.

Campbellford voted down a by-law to raise $12,000 for improvement of sidewalks.

Building permits for the year for Edmonton totalled $1,868,098, compared with $702,224 in 1905.

The Canadian Bank of Commerce will build a new two-storey, stone bank building in Sydney, N.S.

Stratford defeated by-laws to provide money for a market shelter, trunk sewer, and implement shelter.

At Morrisburg a by-law to provide $20,000 for extension and improvements to the electric power plant, were defeated.

The Waterous Engine Works, of Brantford, have taken out a building permit for a $4,000 addition to their main building.

The amount of customs collected at the port of Toronto eclipses that of 1905 by about $525,000, and is over a million dollars greater than 1904.

A large saw mill will be erected by the Graham Island Lumber Company, at Massett Harbor, B.C., with a cutting capacity of 250,000 feet daily.

The B. F. Graham Lumber Company has purchased the Taylor, Pattison Mill on Victoria Arm. The price paid was in the neighborhood of $50,000.

The Dominion Sewer Pipe Company have acquired property in Hamilton and will erect a factory, for the manufacture of sewer pipes, flue linings, gutter pipe and wall coping.

Peterboro carried a by-law to provide $21,000 additional to the $40,000 already in the hands of the Board of Education to erect a new collegiate institute, costing $61,000.

The Canadian General Electric Company, Peterboro, will shortly let contracts fot a two-storey addition, 250 feet long, to their plant. The new addition will be for the lamp and wire departments.

The building permits issued in Victoria, B.C., equal $633,080, nearly $40,000 in advance of those of last year, and it is estimated that the buildings erected in the country immediately surrounding Victoria would easily total in value another $100,000.

Wortman & Ward Manufacturing Company, of London, have asked for a fixed assessment for 10 years at $25,000. The company began business in London 25 years ago, on a very small scale. Now it employs 90 men, and is rapidly increasing its business.

It is said that the Imperial Steel and Wire Company, of Collingwood, will establish a branch in Port Arthur. The factory will have double the capacity of the one at Collingwood, and will employ about 200 men, making wire nails, etc., for the western trade.

A $50,000 factory is to be erected in Toronto by Business Systems, Ltd. This firm has made wonderful progress in the two years of its existence, this being the second time they have moved into larger premises, to meet with the ever increasing demand for their goods.

The contract has been let for the building of the Berg, Sand, Lime and Brick Company, in Brantford. The buildings will consist of a two-storey main building 50 feet square, and another building 100 feet long. The new buildings, when completed, will cost $5,000.

The Galt Metal Works, Galt, manufacturers of architectural sheet metal building machinery, report a 100 per cent. increase in their business during 1906, and with the many new lines they are introducing they expect a corresponding increase during the present year.

The Canada General Electric Company and the Canada Foundry Company who are just completing additions to their buildings at Peterboro and Toronto, are again required to enlarge to meet with the ever increasing demand for their products, which are largely used in construction work.

The Munro Wire Works, in Winnipeg, have extended their plant to meet with the increased business. This new building cost about $30,000, and is set apart for the production of all kinds of wire mattresses and the handling of iron beds. The Northwestern Brass Co. are erecting a steel building, 80x100 feet, at the cost of $40,000.

The Vancouver Portland Cement Com-

pany has been incorporated with a share capital of $1,500,000, for the purpose of manufacturing cement, and all kinds of building materials, with head office in Toronto. The directors are J. S. Lovell, W. Bain, R. Towans, E. W. McNeill, W. F. Ralph, H. Chambers and C. H. Blank, all of Toronto.

The Dominion Iron and Steel Co., in order to put through the purchase of extensive coal lands about the Lingan properties, have decided to form a subsidiary company which will issue bonds to cover the purchase of the properties. These bonds will be guaranteed by the Dominion Iron and Steel Co. It is intended that from the start this subsidiary company should have a sinking fund into which will go all moneys above what is required for the interest on the bonds, and in this way the purchase of the properties will be gradually provided for.

Besides electing a Water and Light Commission for 1907, the town of Goderich passed three industrial by-laws, the loans in connection with which aggregate $75,000. The Kensington Furniture Company will now double their plant, and the Goderich Carriage Company, a new concern backed by local men, will take over Walker's carriage works, and will spend $15,000 in enlarging and adding machinery. The Rogers Mfg. Co., who have acquired the plant of the Goderich Engine Works, will also spend a large sum in adding to the present plant, and will go into the manufacture of journal-boxes, and other railway specialties; it is understood that they will take up the construction of railway snow-ploughs.

The development of the agricultural implement trade at Regina continues at a remarkable rate. The fact that six million dollars' worth of implements were sold there in 1906 has apparently spurred the big concerns not now represented to establish warehouses. It is announced that the Nichols-Shepard Co., of Battle Creek, Mich., is about to move its western headquarters from Winnipeg to Regina, It is now negotiating for a large site there and at least two other large concerns have similar action under contemplation. All these will probably move here in the early Spring. In addition to this several important Canadian and American concerns which are now doing business there in only a small way will open large establishments as soon as Spring begins. From present indications the building of warehouses will be one of the features of Regina's constructive programme during 1907.

Montreal will have a busy 1907. During the year the Simplex Car Works, along the Lachine Canal, are to be greatly extended, so as to give double the ordinary capacity. The Canada Car Company have already more orders than they can attend to, and may also have to extend. In the same neighborhood are the Allis-Bullock-Chalmers machinery works, the Wire Works, and the Radiator factory, while the new cotton company, which is to build a factory at Lachine in the Spring or Summer, is materializing. In the east end, the Locomotive Works at Longue Pointe are to be extended at a cost of $1,000,000. In the neighborhood of the Angus shops a new town has grown up, and this will be added to during the Spring and Summer, for the C.P.R. cannot overtake its own orders at these shops, which are the largest and best equipped on the continent. There will be more building in Montreal proper during the coming year than in any previous year, it is predicted.

VOTES ON PUBLIC IMPROVEMENTS

The councils of a large number of Ontario cities and towns submitted by-laws at the municipal elections on Jan 7, to raise money by way of debentures for various improvements. In the majority of cases these by-laws were carried.

Southampton decided to raise $5,000 to extend the waterworks system.

Napanee passed by-laws to improve the town's sewerage.

Waterloo voted 390 for and 74 against the sewer commission proposal, and also carried a by-law for a $23,000 loan for sewer farm improvements.

St. Catharines voted favorably for extension of the waterworks.

Listowel decided by 17 votes to raise $14,500 to construct new bridges.

Brantford carried sewer extension by-law.

Almonte decided to appoint an electric light commission.

Kincardine carried the Grand Trunk station, Coleman, and Park by-law.

Woodstock endorsed by-laws to establish a parks commission and to raise $20,000 for sewer extensions.

In a quiet vote Guelph took a jump forward in its municipal government by deciding in favor of commissions to manage its waterworks and gas and electric light plants. The vote for the waterworks commission was 1,132 for, 376 against; for gas and electric light commission, 1,104 for 371 against, and to loan $25,000 to enable Morlock Bros. to extend their factory, 966 for, 159 against.

Renfrew, by a vote of 136 to 103, decided to raise $6,000 for sewer extensions, and the county system of good roads was carried, 171 to 65.

Bowmanville decided to have its waterworks managed by a commission.

TO AID INDUSTRIES.

Windsor passed by a majority of 60 an industrial by-law intended to enable the council to arrange with manufacturers seeking locations.

Whitby carried the Ontario Car Works by-law, 359 for and 18 against.

Wingham will loan the Wingham Carriage Co. $5,000.

Only six voted against the by-law submitted at Deseronto, granting the Deseronto Furniture Co. a loan of $10,000.

Welland carried a by-law granting fixed assessment and other concessions to the Robertson Machinery Co.

Goderich decided to aid the Rogers Manufacturing Co., the Furniture Co., and the Carriage Co.

Amherstburg defeated a by-law to grant aid in establishing a canning factory, the required number of favorable votes not being polled.

Orangeville ratified a loan of $15,000 to the Hurndall Novelty Manufacturing Co. by 415 majority.

Only 3 voted nay and 134 yea on the by-law submitted in Cayuga to give the Window Glass Manufacturing Co. 14 acres of land and tax exemption.

The by-law to aid in the rebuilding of the old Dyment Foundry at Barrie secured 173 votes short of the required number.

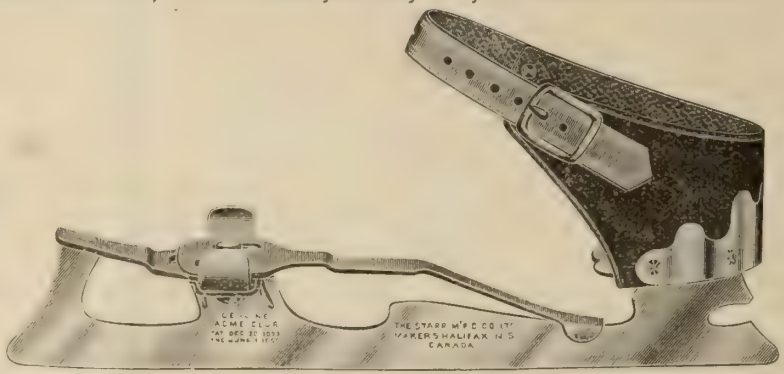
1907 GREETINGS 1907

Let us embrace this opportunity of thanking our many friends throughout Canada, from the Atlantic to the Pacific, for the extensive patronage they have extended us during 1906, and to wish them one and all a **HAPPY AND PROSPEROUS NEW YEAR.**

Our business has been away ahead of any previous year, which we believe is due to the quality of our goods, and to the fact that we make a full line, both in hockey and self-fastening skates, and in skates for pleasure and fancy skating; in fact, skates to suit everybody.

Our representative is now on the road, and will call on you shortly; but in case you wish prices or information quickly, and would rather not wait for him, drop us a line; we are always pleased to answer letters.



"MIC-MAC" and "REX" Hockey Sticks are only made by us. Be sure you have Sticks with the registered trade marks. They are the Sticks that give players the best satisfaction.

The "Mic-Mac" Hockey Stick.

Here we show our **Genuine Acme** also the **Acme with Ankle Support.** This is the world's leader in self-fastening skates. No doubt of that. Some makers have imitated it, but there is no skate that has the quality and general excellence that the **Acme** has. To give your customer the very best satisfaction, you must sell them the **Genuine Acme.** In the interest of your own business, be sure that you buy only the **Genuine Acme.**

GUELPH, ONT.

IT WILL PAY YOU

during the coming year to handle

"M.R.M." brand HORSE SHOES

A FEW REASONS WHY:

We want your trade.

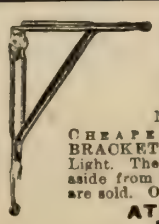
Our shoes are made to suit the best class of the farrier trade.

They are asked for by farriers all over the country.

Wherever used, they have given universal satisfaction.

The above we feel confident will convince you that it will be to your advantage to handle the "M.R.M." brand.

The Montreal Rolling Mills Co.



Hardware Dealers Should Wake Up—

to the fact that **SHEET METAL BUILDING GOODS** could be made a large and ever increasing factor in their business. Farmers, manufacturers and all owners and builders are daily demanding these goods because they fill satisfactorily the gap which is being left by the diminishing supply of good and cheap timber. Some dealers have already established a considerable trade in this line, proving that it can be done, but it's "only as a drop in the bucket" compared to what's to come. If the **HARDWARE DEALERS** and **TINSMITHS** don't look after this valuable trade, they will live to regret it. **Some one else will reap the harvest.**

Don't say—"**There's nothing in it for me**"—because there certainly is, providing you have the **RIGHT GOODS** and the **RIGHT FIRM** behind them. It doesn't matter about the manufacturers who sell direct to the consumer. One good, square firm, who will **PROTECT** and **HELP** a good orginization of agents, can, with those agents, do more business than three or four of the other kind.

We can show you—all we need to prove to you how this combination will work in 1907 is some more good agents—we've got the goods and the other qualifications. One of our representatives will be along your way soon after New Years to talk to you on the subject. If you are interested drop us a line at once and make certain that you will not be missed.

CAUSES OF VARNISH CRACKING.

"Techno" in writing upon the subject of the cracking of varnish in The Decorator, says: "So much has already been said on this subject that it will only be necessary to summarize here the causes and their avoidance. Various causes produce cracks of distinct character. The addition of terebine to a varnish for hardening will often cause cracking, especially when exposed to direct sunlight. These cracks at first give the varnish a silky appearance, due to their hair-like fineness and great numbers. Subsequently many of the cracks open out wider under atmospheric variations. But the crack due to terebine is always sharp and clean, and mostly straight, as though cut with a razor edge, crossing the work in all directions. Terebine is sometimes used in graining color and other undercoats prior to varnishing. In such cases the cracks will show their origin to be in undercoats by the depth of every crack, while if the varnish only be at fault the undercoats will in many parts remain unaffected.

The application of any hard, quick-drying coat of paint or varnish on a soft undercoat is liable to cause cracking, and would affect any super-coat likewise. This may sometimes be traceable to a glaze coating prior to varnishing, to a gold-size and turps flatting coat on an oily ground or to a hard-drying varnish on a soft groundwork. Goldsize cracks are distinguishable by their usually lying in the direct line of the brushwork, and having soft round edges, turning inwards, the cracks being less numerous but more open than terebine cracks.

The application of a coat of size upon a hard, non-porous ground prior to varnishing, such as sometimes occurs when re-varnishing old work in cheap jobs, if the size be fairly strong, will sometimes result in cracks, the cracks being notably of polygon shape and the edges having a tendency to curl outwards.

Cracking sometimes occurs only where knots exist in the woodwork. That is generally due to the preliminary use of too much shellac or patent knotting destroying the porous key of the wood, leaving no hold for the priming coat. As no affinity exists between the shellac and the oil paint, the latter cracks by irregular contraction and expansion of the paint and the wood. The remedy is to scrape down to the bare wood and to paint again without fresh knotting, or after a thin coat of reduced strength, in case of new woodwork.

To avoid tendency to cracking, there is no better course than to take care that every coat prior to varnishing, be thin, and allowed to dry hard before applying the following coat. It is important also that no quick-drying medium, such as goldsize or terebine, be employed in painting over a coat mixed with ordinary linseed or boiled oil, though the reverse order may be employed without danger, and in case of quick-drying paint being necessary, employ no oil at all, excepting for the priming coat on new wood, and the finishing varnish may then be elastic or hard as desired without danger of cracking. A hard varnish may be used as an undercoat, and an elastic finishing over-varnish over that. But the reverse order may give rise to the fault under notice."

TURPENTINE.

Turpentine is a product of the pine tree, and in this country almost the entire consumption is produced from the yellow or long-leaf pine of the gulf states.

Formerly vast sections of all the states south of the Virginias and the Ohio river and east of the Mississippi were covered with immense forests of yellow pine, but at the present time the turpentine belt is confined to the gulf states. Though all the available resources in the adjoining states have not been exhausted, the end is plainly in sight unless the devastation, caused by the criminally wasteful methods of production, can be checked.

The chief use of turpentine is in paints and varnishes, where it is employed as a volatile thinning agent and is valued for its penetrating and binding qualities. It evaporates in the right manner leaving no residue. It has the peculiar property of forming ozone, which is practically a condensed form of oxygen, and as oxygen is the cause of the drying of the paints and varnishes, turpentine to this extent serves a double purpose.

About 13 per cent. of the thinning vehicle used in the manufacture of best prepared paint (outside white) is turpentine and japan driers, says Co-operation and Expansion. We have found that this proportion answers the purpose for which it is intended on finishing coats. On the priming coat, however, more turpentine should be added, and especially when painting hard pine, (the source of turpentine in this country), turpentine should constitute from 25 to 40 per cent. of the total amount of thinners used.

Combinations of producers and factors or merchants have had some effect upon prices in recent years; but no combination, however effective, in an industry so widespread as this, could have raised the price of a product to the present current prices for turpentine.

Looking Back Over 1906

if you have not been an Elastilite agent you can readily see where one mistake has been made.

Elastilite Varnish is an old reliable yet the up-to-the-minute line for 1907.

An Important Announcement regarding "Anchor" and "English" Liquid House Paints.

FOR some time we have been supplying the trade with Paints put up under both brands, but for various reasons we find it advisable to sell hereafter only **"ENGLISH" LIQUID HOUSE PAINTS**. The two brands were identical in quality, the only White Lead used in their manufacture being Brandram's B. B. Genuine White Lead, the world's standard for close on to two centuries. So when we sell you **"ENGLISH" LIQUID HOUSE PAINTS** in place of "ANCHOR," you will know that you are getting the same Paints as you ordered under "ANCHOR," and we would ask you to get into the way of specifying **"ENGLISH"** in your orders in place of "ANCHOR." We would also ask you to tell your customers that "**ANCHOR**" Liquid **House** Paints are now called "**ENGLISH**," and so assist us to familiarize consumers with the name "**ENGLISH**" as the name of the leading brand of **LIQUID HOUSE PAINTS**.

We maintain the "**ANCHOR**" trade mark on all our other Specialties.

Paint and Oil Markets

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, January 11, 1907

Now that the holidays are over, travellers are brushing up their samples and prices and business has again assumed a more lively aspect. While shipments just now are not very heavy, a good flow of orders is coming in for February and later shipments.

White lead maintains its advances and it looks as if there would be a scarcity in the dry article before the arrival of early spring shipments.

Linseed oil keeps steady, without any special features.

Turpentine in barrels shows an advance of two cents per gallon over last week's prices.

Benzine in barrels drops five cents per gallon.

The Martin-Senour paint has been advanced 5 cents per gallon, and is now quoted at $1.50 pints, $1.45 quarts, and $1.40 gallons.

LINSEED OIL—Remains the same: Raw, 1 to 4 barrels, 55c.; 5 to 9 barrels, 54c.; boiled, 1 to 4 barrels, 58c.; 5 to 9 barrels, 57c.

TURPENTINE—(In barrels) shows an advance of 2 cents per gallon. Smaller quantities remain the same. We quote: Single barrel, 98c. per gal.; two barrels or over, 97c. per gal.; for smaller quantities than barrels, 5c. extra per gal. is charged Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

GROUND WHITE LEAD—Maintains its advance. Best brands, Government Standard, $7.25 to $7.50; No. 1, $6.90 to $7.15; No. 2, $6.55 to $6.90; No. 3, $6.30 to $6.55 all f.o.b., Montreal.

DRY WHITE ZINC—We still quote as follows: V.M. Red Seal, 7½c. to 8c.; Red Seal, 7c to 8c; French V.M., 6c to 7c; Lehigh, 5c to 6c.

WHITE ZINC—(Ground in oil) Prices remain firm at their recent advance. We quote: Pure, 8½c. to 9½c.; No. 1, 7c. to 8c.; No. 2, 5¾c. to 6¾c.

PUTTY—A heavy demand is shown. We quote prices: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladder putty in barrels, $1.75.

ORANGE MINERAL—Prices are as follows: Casks, 8c.; 100 lb. kegs, 8½c.

RED LEAD—The following quotations are firm: Genuine red lead in casks, $6.00; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs $6, and smaller quantities, $6.75.

PARIS GREEN—The following prices still hold good: In barrels, about 600 pounds, 23¼c. per lb.; in arsenic kegs, 250 lbs., 23½c.; in 50 lb. drums, 24c.; in 25 lb. drums, 24½c.; in 1 lb. packets, 100 lbs. in case, 25c.; in 1 lb packets, 50 lbs in case, 25½c.; in ½ lb. packets, 100 lbs in case, 27c.; in 1 lb. tins, 26c. f.o.b. Montreal. Term three months net or 2 per cent. 30 days.

SHELLAC—We quote: Bleached, in bars or ground, 46c. per lb., f.o.b. Eastern Canadian points; bone dry, 57c. per lb., f.o.b. Eastern Canadian points; T. N. orange, etc., 48c per lb. f.o.b. New York.

SHELLAC VARNISH—Prices remain: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.50 per gallon.

CASTOR OIL—Our prices are: Firsts in cases, 8½c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

BENZINE—(in barrels) Drop 5 cts. We quote: 20 cts. per gallon.

GASOLINE—(In barrels) We quote: 22½ cts. per gallon.

PETROLEUM—(In barrels) Our prices are: American prime white coal, 15½c. per gallon. American water, 17c. per gallon; Pratt's Astral, 19½c. per gallon.

WINDOW GLASS—Our prices are: First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.20; second break, 100 feet, $3.40; third break, 100 feet, $3.95; fourth break, 100 feet, $4.15; fifth break, 100 feet, $4.40; sixth break, 100 feet, $4.95. Diamond Star: First break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second break, $4.80; third break, 100 feet, $5.75; fourth break, 100 feet, $6.50; fifth break, 100 feet, $7.50; sixth break, 100 feet, $7.50; seventh break, 100 feet, $8; eighth break, 100 feet, $9. Double Diamond: First break, 50 feet, $3.45; second break, 50 feet, $3.75; first break, 100 feet, $6.75; second break, 100 feet, $7.25; third break, 100 feet, $8.75; fourth break, 100 feet, $10; fifth break, 100 feet, $11.50; sixth break, 100 feet, $12.50; seventh break, 100 feet, $14; eighth break, 100 feet, $16.50; ninth break, 100 feet, $18; tenth break, 100 feet, $20; eleventh break, 100 feet, $24; twelfth break, 100 feet, $28.50. Discount on Diamond Star, 20 per cent.; on Double Diamond, 40 per cent.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Jan 11, 1907.

Very few changes have to be reported in paint and oil markets this week. We have changed our last week's quotations of raw and boiled oil and now quote: 1 to 3 barrels, raw, 59c; 4 to 7 barrels, raw, 57c; 8 and over, 56c, adding 3 cents for boiled.

Domestic lines, such as aluminum

PAINT AND OIL MARKET.

CANADIAN PARIS GREEN HAS TAKEN QUITE AN UPWARD MOVEMENT, BEING QUOTED AT 25c. IN POUND PAPERS, BRINGING IT TO THE SAME LEVEL AS THE IMPORTED ARTICLE. MANY CLAIM THE CANADIAN PARIS GREEN IS BETTER THAN ANYTHING ON THE MARKET.

To prevent disappointment please look for the

Canada Paint Company's

name upon each package.

varnish, etc., are selling well, and book orders for these articles are received daily. Travelers all report the outlook for the business of 1907 even greater than that of 1906.

WHITE LEAD—Ex Toronto pure white, $7.40; No. 1, $6.65; No. 2, $6.25; No. 3, $5.90; No. 4, $5.65 in packages of 25 pounds and upwards; 1-2c per pound extra will be charged for 12 1-2 pound packages; genuine dry white lead in casks, $7.00.

RED LEAD—Genuine in casks of 500 lbs., $6.00; ditto, in kegs of 100 lbs., $6.50; No. 1 in casks of 500 lbs., $5.75; ditto, in kegs of 100 lbs., $6.25.

DRY WHITE ZINC— In casks, 7 1-2c.; in 100 lbs., 8c., No. 1, in casks 6 1-2c., in 100 lbs., 7c.

WHITE ZINC (ground in oil)—In 25-lb. irons, 8c.; in 12 1-2 lbs., 8 1-2c.

SHINGLE STAIN—In 5-gallon lots, 75c. to 80c. per gallon.

PARIS WHITE—90c. in barrels to $1.25 per 100 lbs.

WHITING—60c. per 100 lbs. in barrels; Gilders' bolted whiting, 90c. in barrels, $1.15 in smaller quantities.

SHELLAC VARNISH—Pure orange in barrels, $2.70; white, $2.82 1-2 per barrel; No. 1 (orange) $2.50; gum shellac, bone dry, 63c., Toronto. T. N. (orange) 51c. net Toronto.

LINSEED OIL—We now quote raw, 1 to 3 barrels, 59c; 4 to 7 barrels, 57c; 8 and over, 56c, add 3c to this price for boiled oil. Toronto, Hamilton, London and Guelph net 30 days.

TURPENTINE—Single barrels, 97c.; 2 to 4 barrels, 96c.; f.o.b. point of shipment, net 30 days. Less than barrels, $1.02 per gallon.

GLUES—French Medal, 12 1-2c. per pound; domestic sheet, 10 1-2c. per lb.

PUTTY—Ordinary, 800 casks, $1.50; 100 drums, $1.75; barrels or bladders, $1.75; 100-lb. cases, $1.90;; 25-lb. irons, $1.85; 25-lb. tins (4 to case) $1.90; 12 ½ lb. tins (8 to case) $2.10.

LIQUID PAINTS—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

BARN PAINTS—Gals., 70c. to 80c.

BRIDGE PAINTS—Gals., 75c. to $1.

CASTOR OIL—English, in cases, 9 1-2c. to 10c. per lb., and 11c. for single tins.

PARIS GREEN—Canadian manufacturers are quoting their base price at 25c and on the English, 25¾ is quoted f.o.b., Toronto.

REFINED PETROLEUM — Dealers are stocking up heavily for the Winter. We still quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM — We quote: Canadian, $1.32; Pennsylvania, $1.58; Ohio, 96c.

Fame is delightful, but as collateral it does not rank high.

Be moderate in the use of every thing except fresh air and sunshine. a man a man.

FACTORY FOR ST. JOHN'S, NFLD.

The Canadian trade agent at St. John Nfld. reports that the Standard Manufacturing Company of that place are about to add to their other lines of business, that of making paint. The manager has gone to the United States to look up the necessary machinery and make other arrangements in connection with the proposal. A small factory making copper paint for the use of vessels has been in operation for some years, and having acquired control of the local demand, and driven the American made article out of the market, has not thought it necessary to advertise it in any way. The total quantity of paint used here is not very large, and the latest available figures give the importations as follows:—From Great Britain, $25,942; from Canada, $24,532; from United States, $16,718; total, $66,742.

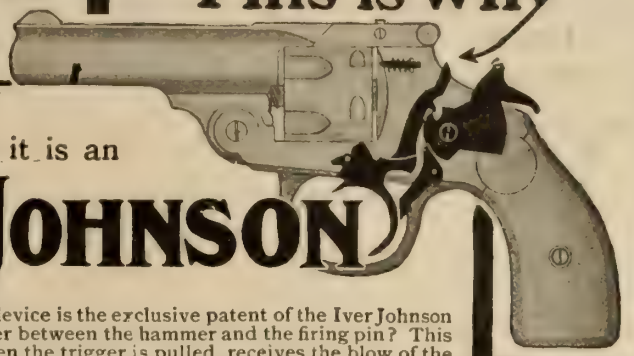
The duty on paint is 30 per cent. ad valorem, and it is considered that there is a favorable opening under this protection for a successful industry probably amounting to a value of over $100,000 a year.

A SEALING CEMENT.

The composition of a cement to securely seal receptacles closed by screw-cap (or, in fact, by any other method) must necessarily depend upon the nature of the contents of the vessel. If of an alcoholic, oleaginous or resinous nature, for instance, it would require a cement differing from that which would be required for an aqueous solution.

For the first class of articles a cement made with water-soluble gums, gelatin, etc., would be appropriate, while for the other class, rosin, shellac, etc., would answer. For a sealing wax of the first class, kasein dissolved in a 5 per cent. aqueous solution of borax would answer, and so would any of the following: Borax, 1 part; water, 7 parts; shellac, sufficient to make the solution of the desired thickness. A solution of glue would also answer.

For the second class try a mixture of clear rosin, 12 parts; blond shellac, 20 parts; turpentine, 6 parts; dissolved in oil of turpentine. A little experimentation along these lines will enable you to get a satisfactory article.



TURPENTINE FROM PULP.

A Maine company is successfully making turpentine from spruce pulp waste. Heretofore the product has been obtained practically wholly from southern pine. The Industrial Journal, of Bangor, Me., says that "the turpentine obtained as a by-product in the manufacture of spruce pulp answers all purposes of pine turpentine. The ordinary person could never tell the difference between the two."

The Canadian Pacific Railway has completed another huge irrigation project, in Southern Alberta, by which a valley 150 miles in length by 40 miles in width is being brought under cultivation. This block of irrigated lands alone is estimated to have room for half a million people, and it is a significant fact that 95 per cent. of the present settlers in the district are Americans.

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson never fails when you **pull the trigger** and never "goes off" when you don't.

Iver Johnson Safety Automatic

Prices—Hammer $6.50, Hammerless $7.50.

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply

Please send for descriptive catalogue, free upon request. It tells all about it.

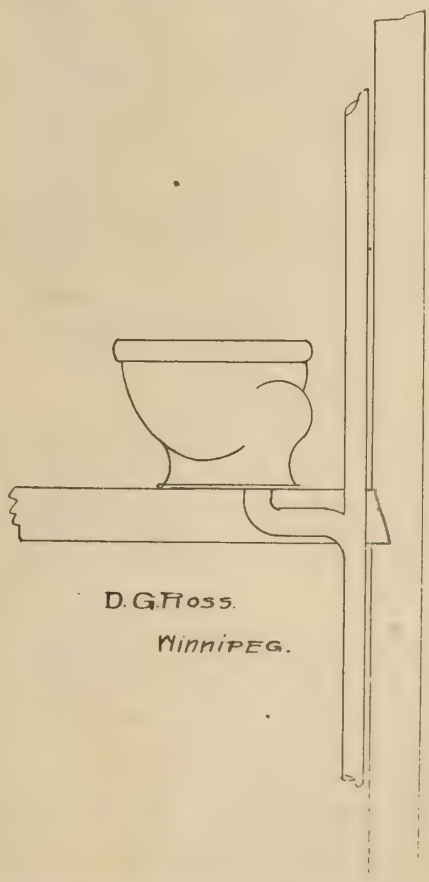
Plumbing and Steamfitting

BRANCH VENTILATING PIPES.

The increasing efficiency of sanitary plumbing work during recent years, and the different methods of guarding against the escape of foul air from soil and waste pipes which have been introduced by various inventors and patentees, have been the cause of much discussion among those who advise and direct the work and those who have to find the money for carrying it out.

It was many years before the public in general, and architects in particular, could be persuaded that it was necessary to fix taps in all waste pipes immediately under the fittings, whether they were baths, sinks, or lavatory basins, in order to prevent the foul air from the waste pipes finding its way into the apartments in which these fittings were situated. It was supposed that if the waste pipe discharged over a gulley trap, however foul this may have been, the trap in the waste pipe was not merely unnecessary, but a thing to be avoided. Some, indeed, maintain that traps in waste pipes are a serious obstruction, and describe them as miniature cesspools, while they leave out of account the much larger cesspool, which in many cases is so constructed as to accumulate filth in a dangerous manner. And, strange to say, the local sanitary authorities in many places supported the idea, and actually prohibited the use of traps in the waste pipes. Such a state of things, is, however slowly passing away, and in the modern sanitary by-laws there are clauses which insist upon the fixing of self-cleansing traps in every waste pipe. Moreover, every branch waste pipe near the trap has to be fitted with a branch ventilating pipe, or "puff pipe" as it is sometimes called, leading to external air. This is regarded by many people as unnecessary extravagance. And it must be acknowledged that under some circumstances such a branch ventilating pipe is not really required for retaining the water seal of the trap.

In the case of short waste pipes in connection with flat bottom sinks which are fitted with a waste grating, and not with a plug waste, the necessity does not arise. But where there are several fittings on various floors on one waste pipe every trap must be provided with a branch ventilating pipe in order to preserve the water seal from syphonage, and the local sanitary authority is acting within its rights in insisting on this regulation being carried out. But the point is, have the sanitary authority power to go beyond the letter and spirit of the by-laws and insist on the branch-ventilating pipes being connected to one main ventilating pipe, and either carried above the roof or connected with the upper end of the main waste pipe, and treated in the same way as an anti-syphonage pipe in connection with a stack of soil pipe? This, we understand, is being demanded in several instances, particularly in blocks or residential flats, and, even if it were desirable, has the sanitary authority the power to enforce it, if it is not provided for in the by-laws? Then, if it is done, surely the grating over the gulley into which the main waste pipe discharges should be closed also, because there must be a much larger volume of foul air escape from this grating than is likely to issue from the ends of the small branch ventilating pipes.



A still more important point is that, if it is necessary to provide as complete a fresh air break as possible between the fittings and the drains, then the shorter length of ventilating pipe to the open air the better, beside the importance of having an open grating over the gulley at the foot of the waste pipe. The whole contention of joining-up branch vents is to a large extent based on a misconception, for it can be shown by experiment that instead of the vents discharging air from the waste pipe, at the face of the wall, where they terminate, they are nearly always acting as air inlets, supplying air to the main waste and ventilating pipe which is carried above the roof.—English Plumbers' Review.

CLOSET CONNECTIONS TO SOIL PIPE STACK

[Two more letters sent in replying to the question, the prize-winning answer to which was published in HARDWARE AND METAL of December 29.]

The letters published to-day in answer to our query re break syphons, are self-explanatory, that by Mr. Ross having the decided advantage of being accompanied by an illustration.

The letter by Mr. Julien contains

many good arguments, though we cannot agree that under all circumstances a job fitted throughout with pot traps without vents would be perfectly sanitary.

Connection Not Necessary.

In my opinion it is not necessary that every closet connection to soil pipe stack should be fitted with a break syphon. Up-to-date and more sanitary plumbing goods are now on the market which makes it unnecessary for these break syphons to be used. The centrifugal lead trap is absolutely non-syphoning and self-cleansing and does away with the vent. There is a disadvantage too where these air vents have been put in, for sooner or later they become choked up, thus causing great inconvenience. If an up-to-date closet is being fixed, the space between bowl and soil pipe stack would be about 18 inches, and a 4-inch lead bend would connect the two. On the accompanying sketch it will be at once seen why a break syphon is unnecessary. The closet cannot syphon, for when it is flushed the discharge of water is not sufficient to fill the short length of pipe or bend used, and the quantity of foul air between bowl and soil pipe stack is reduced to a minimum.

D. G. ROSS, Winnipeg.

I consider that no back vent should be put to closets, when no more than three feet from stack, or even longer, for a horizontal run of 4-inch pipe is never filled with the rush of water from a closet, hence cannot be syphoned. And, as the closet is always put near the stack, I am convinced that no back vent is necessary. I will go still further re back vents; I would call a job perfect if it was done with pot traps.

Do away with back vents, as in large cities. Many people leave their homes for the country, and when they come back they find that their house is filled with sewer gas. There is not much seal in the ordinary trap, with so much circulation of air through the main stack and back vent, that it evaporates the water from said trap.

These are my personal views of modern plumbing, as done in our city at present.

GIL. JULIEN, Ottawa.

Pull down the show window blinds and your clerks can all take a rest.

The merchant who makes money does it by close attention to business.

QUALITIES OF A GOOD SALESMAN

R. T. CRANE, in the Valve World.

Some people seem to believe that a good salesman is one who is able to deceive, humbug, cheat and defraud the buyer, and this, aside from the question of morality, and considered only from the money making point of view, may be true where the business is such that the seller does not expect to meet or sell to the same person a second time. We claim, however, that any enterprise which is conducted in that manner is not entitled to the dignity of being classed as a business, for it is nothing more than a swindle.

We maintain that in an ordinary business it is not good policy for salesmen to practice the slightest deception, and one of the first things that we require of our men is that they shall be absolutely honest, frank and fair in their treatment of our customers. We think the value to a salesman of having these qualities appear in his every feature and action and suggested by every word that he utters cannot be overestimated.

Every purchaser is, we believe, desirous of dealing with a house that supplies honest goods at honest prices, that carries stocks in sufficient variety and quantity to take care of his requirements without delay, and where he can be sure of always obtaining the same line of goods.

It is a great relief to a buyer when he finds such a concern, and he should at once see that it is to his interest to confine his dealings to that house, as he is usually so fully occupied in looking after the other portions of his work that he cannot afford to spend his time endeavoring to ascertain whether he has been defrauded either in the quality of goods or in prices.

Trade Only With Reliable Firms.

From our own experience, we know it is a great satisfaction, when purchasing goods, to feel that we are dealing with a house having such a reputation. In fact, we have made it a rule to trade only with concerns of that kind.

For a firm to gain and maintain a reputation for fair dealing, it is not enough for the firm itself to be honest, but the policy of the house must be reflected by the salesmen, who, in many cases, are the only persons connected with the firm the trade ever meet. Hence the importance of having salesmen of good character, who, in soliciting business, make only such statements as the house can live up to. It is apparent, therefore, that an honest concern cannot afford to employ untruthful salesmen, as nothing will cause it greater injury than to have such men out among the trade.

On the other hand, a house selling inferior goods needs salesmen who can and will lie sufficiently to conceal the inferiority beneath a cloak of plausible phrases. Therefore, when we find by experience a salesman whose statements are always correct, and who will not stoop to misrepresentation, we are convinced that his house in honest and reliable, and are disposed to give him our business.

For a salesman to impress the trade in this way involves something more than simply refraining from lying. He must confine himself to what he knows to be true, neither deliberately lying, nor mixing up guesses opinions and facts in such a way as to deceive or mislead the customer, who, after having discovered a deception, can rarely be sold to again by the salesman, with the result that the house loses a customer.

Salesmen Must Know Goods.

Many salesmen are apt to be slovenly and careless in their replies to questions, sometimes possibly with the intention to deceive, but probably many more times for the purpose of concealing their ignorance on the subject about which they are questioned. This is a practice that we most strongly condemn. We very much prefer that our men shall acknowledge their ignorance to the customer and suggest to him that he apply to the house for information, if the matter is of sufficient importance to take that trouble. While salesmen are not expected to give customers unusual or technical information, still it is exceedingly desirable that they should have an extensive knowledge of the goods they are handling so as to be able to describe their goods and answer questions likely to be asked.

Occasionally a salesman is asked his opinion as to market conditions. Our salesmen are instructed not to give any opinion in the matter of prospective rise or fall in prices, as in our judgment salesmen are not in a position to be reliably informed as to the prospective trend of prices, and we cannot afford to have them deceive or mislead the trade in this way, any more than we can afford to have them misrepresent the quality of our goods. In any event, we do not care to encourage our customers to gamble on the market. However, if customers have contracts on which they would stand to suffer loss if prices were advanced, we feel that it would not be at all improper for our salesmen as a matter of safety to the customers, to recommend that they place orders to cover such contracts.

Cut Out Treating Habit.

One mistake that salesmen frequently make is to urge an audience with a man when he is busy, thereby annoying him so that he will not give them a proper reception. Besides being tactful, it goes without saying that salesmen should be men of good address and affable in manner.

Another feature of the subject which some of the older people in business will remember was a common practice in the past, was the custom of drinking and carousing with customers. In those times some dealers kept a bar in their stores, others would have jugs or bottles of whisky on hand for their customers, and it was looked upon as being rather necessary for salesmen to take people out and entertain them by drinking and carousing with them in order to hold their trade.

We are pleased to be able to state that this practice has almost totally disappeared, business now being transacted more strictly on the basis of merit than was formerly the case. We laid down the rule years ago that if a man's trade could not be obtained without having our salesmen dissipate with him, we did not want it at all.

ATTRACTIVE ANNIVERSARY NUMBER.

The Plumbers' Trade Journal of New York have issued a very attractive anniversary and holiday number, dated January 1st, this being the first issue of their forty-first year. The book comprises 132 pages of well gotten up reading and advertising matter, innumerable illustrations being given to illustrate the remarkable development of the plumbing and heating trades during the lifetime of the paper. To read the various articles and study the illustrations showing the first buildings occupied by industries which are now known to the trade throughout the entire world is very instructive, the accompanying reading matter being also very interesting, showing the lack of sanitary conveniences a quarter of a century ago and the wonderful improvements which have been made since that time. An interesting article to Canadians as well as to the plumbers across the line is one entitled "A Universal Plumbing Code," by Herbert F. Shade, Victoria, B.C., which we will reproduce in a coming issue of Hardware and Metal. The publishers are to be congratulated on the excellence of their anniversary issue.

PLUMBERS' BRASS GOODS.

Catalogue B, for 1907, of the United Brass Manufacturing Company, Cleveland, Ohio, has just been issued to the trade, it being 7x9 inches, containing about 200 pages fully illustrated of their many different lines for water, gas and steam, also all supplies for bath-room and hot water heating. This catalogue will no doubt be found of great value to hardware and plumbing merchants, as the complete lines manufactured by this firm, fully illustrated, will be an invaluable aid in ordering goods, and will be sent to any merchant interested in these goods, by writing, mentioning this paper.

NEW SHOP AT HAILEYBURY.

C. A. McKane & Co. have opened a plumbing, hot water and steam heating shop at Haileybury. Mr. McKane was formerly in business at Newmarket and prior to that time with the Office Specialty Manufacturing Co., and connected with the plumbing and heating trades in Toronto. He should find a good opening for his energies in the rapidly developing north country. Mr. McKane was a caller on Hardware and Metal in Toronto on Tuesday, being now engaged in buying his stocks of material for the coming season.

PLUMBING FAILURE.

The Thorn Plumbing Co., of Toronto has been wound up on the application of the Gurney Foundry Co., who are creditors to the extent of $1,069. The company was incorporated in October, 1905, with a nominal capital of $20,000.

PLUMBING MARKETS

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, January 11, 1907

For some weeks we have been looking for an advance on hot water and steam boilers owing to the big jumps which have taken place in the pig iron market since the last changes were made on boiler quotations. Higher prices are certainly warranted by the condition of the iron market, but events during the past week have made it practically certain that present prices will continue unchanged for some time to come.

As predicted by us a month ago, an advance of about 10 per cent. has been announced on enamelware; the new discounts on various lines being quoted below. The condition of the iron market warrants higher prices, and the advanced prices will undoubtedly hold firm during the coming season, as all foundries find it difficult to secure stocks of iron owing to the mills and furnaces being booked so far ahead with orders.

Iron pipe has also been subject to several changes. The new list issued this week of sizes up to 2 1-2 inches, shows an advance, while quotations on larger sizes are also revised. Still another change is in straps and bends, the discount on which has been reduced to 40 per cent. There is also talk of another advance in cast iron fittings.

As is to be expected at this season, trade in both plumbing and heating supplies is none too active. In anticipation, however, of advanced prices, many plumbers are booking their orders ahead for Spring delivery.

LEAD PIPE — The discount on lead pipe continues at 5 per cent. off the list price of 7c. per pound. Lead waste, 8c. per pound with 5 off. Caulking lead 5 3-4c. to 6c. per pound. Traps and bends, 40 per cent., discount.

SOIL PIPE AND FITTINGS.—New lists will show advances as follows: Medium and extra heavy pipe and fittings, 60 per cent.; light pipe 50 per cent.; light fittings, 50 and 10 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE.—New lists show advances on all lines up to 2½ inches. 1-inch black pipe is quoted at $4.95, and one-inch galvanized at $6.60. Full list in current market quotations.

IRON PIPE FITTINGS — New lists are as follows: Cast iron elbows, tees, crosses, etc., 62½ per cent.; cast iron plugs and bushings, 62½ per cent.; flange unions, 62½ per cent.; nipples, 70 and 10 per cent.; iron cocks, 55 and 5 per cent.; Canadian malleable, 30 per cent.; malleable unions, 55 and 5 per cent.; malleable bushings, 55 per cent.; cast iron ceiling plates, plain 65 per cent.; cast iron floor, 70 per cent.; hook plates, 60 per cent.; expansion plates, 65 per cent.; headers, 60 per cent, hangers, 65 per cent.; standard list.

GALVANIZED IRON RANGE BOILERS—We quote: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon standard, $4.75; extra heavy, $6.75; 24 gallon, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. Copper range boilers are now net list.

RADIATORS—Prices are very stiff at: Hot water, 47½ per cent.; steam, 50 per cent.; wall radiators, 45 per cent.; specials, 45 per cent. Hot water boilers are still subject to unchanged prices in spite of heavy advances on foundry iron.

SOLDER — Quotations remain firm as follows: Bar solder, half-and-half, guaranteed, 27c.; wiping, 23c.

ENAMELWARE—New lists on enameled baths issued by the Standard Ideal Company on Jan. 3, show a 10 per cent. advance. Lavatories, first quality, 20 and 5 to 20 and 10 off; special, 20 and 10 to 30 and 2½ per cent. discount. Kitchen sinks, plate 300, firsts 60 and 10 off; specials, 65 and 5 per cent. Urinals and range closets, 15 off. Fittings extra.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, January 11, 1907.

General business is excellent. Wholesalers report that the way business has kept up lately is something wonderful and heretofore practically unknown.

The expected advance in iron pipe is no longer a thing of the future—it has arrived.

RANGE BOILERS.—Following prices are well maintained: Iron clad, 30 gallon, $5; 40 gallon, $6.50 net list. Copper, 30 gallon, $25; 35 gallon, $29.50; 40 gallon, $32 net.

LEAD PIPE—Remains firm. We still quote 5 per cent. discount f.o.b. Montreal, Toronto, St. John, N.B., Halifax: f.o.b., London, 15c per hundred lbs extra; f.o.b. Hamilton, 10c per hundred lbs. extra.

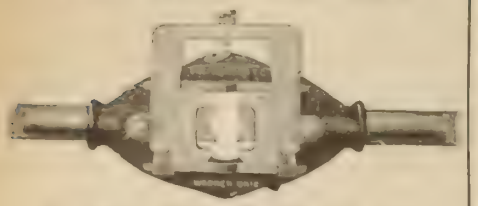
IRON PIPE FITTINGS—The usual trade is being done at unchanged prices. we quote: Discounts on nipples, 1-4 inch to 3 inch, 75 per cent., 3½ inch to 2 inch, 55 per cent.

IRON PIPE—Supplies are still short and the looked-for advance has arrived. Standard pipe in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, 11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.50, discounts on black pipe, ¼ inch, 59 per cent.; ⅜ inch, 59 per cent.; ½ inch, 68 per cent.; Discounts on galvanized pipe: 1-4 inch, 44 per cent.; ⅜ inch, 44 per cent.; ½ inch, 58 per cent.; ¾ to 2 inch, 60 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12; 3-4 inch, $15; 1 inch, $22; 1 1-4 inches, $30; 1 1-2 inches, $36; 2 inches, $50. The discounts on black pipe, ¼ inch, 74 per cent.; ⅜ inch, 69 per cent.; ½ inch to 2 inches, 68 per cent. Galvanized, ¼ inch, 59 per cent.; ⅜ inch, 69 per cent.; ½ to 2 inches 58 per cent.

SOIL PIPE AND FITTINGS -Our prices remain as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER—Prices remain the same: Bar solder, half-and-half, guaranteed 25c.; No. 2 wiping solder, 22c.

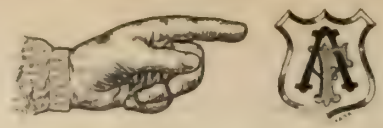
ENAMELWARE.—New list issued on Jan. 3 on Canadian ware shows an advance of 10 per cent. Lavatories, discounts, 1st quality, 30 per cent.; special, 30 and 10 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special, $2.45.



ATTRACTIVE DESK DECORATION.

Cluff Bros., Toronto, selling agents for Warden King & Son, Montreal, have supplied their customers with a very attractive article for desk decoration in the form of an artistically printed and framed quotation of Josh Billings. It is printed in several colors, and contains very valuable tables on the back, giving capacities, dimensions and price list of the Daisy Hot Water Boiler. It will be appreciated by every steam fitter or hardware merchant who receives a copy. Any who have not already received one should forward their name to Cluff Bros. at once before the supply is exhausted. Along with the desk decoration goes a neatly printed souvenir card wishing the trade a prosperous New Year.

TAYLOR FAMILY REUNION.



For the first time in many years the five Taylor brothers, all of whom are well known to the hardware trade throughout Canada, met in Toronto and celebrated their reunion by a dinner at the King Edward Hotel on Tuesday. The five brothers are: Jos. W. Taylor, heating engineer, Johannesburg, South Africa; W. W. Taylor, with Pierce, Butler & Pierce of Syracuse, N.Y., probably America's largest plumbing and heating engineers; John M. Taylor, and Adam Taylor, president and secretary respectively of the Taylor, Forbes Company, of Guelph, manufacturers of Sovereign Hot Water Boilers and Radiators, and James F. Taylor, Toronto, a director of the Taylor, Forbes Company.

YOUR WANTS IN ENAMELWARE

that I might prove slow deliveries are **no** part of my business.

It would pay you to test my claims for promptitude.

ORLANDO VICKERY
178-180 Victoria Street TORONTO, CANADA

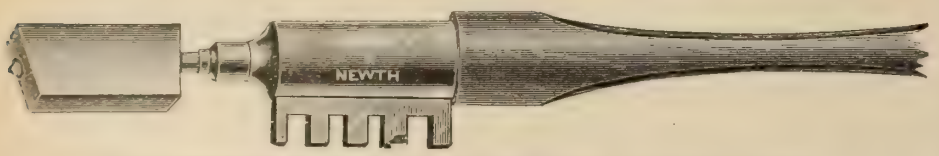
"Diamond Brand" Fittings

are proclaimed the best by practical men—and they should know.

The Material is first-class—The Threads just right and the Finish as Smooth as can be.

OSHAWA STEAM & GAS FITTINGS CO., LIMITED
OSHAWA, CANADA

When You Buy Demand Proof



Don't take any substitute for Glauber Brass goods. Make the salesman show you. Brass has gone up no less than fifteen per cent., and if you don't get proofs before you buy you take chances of getting something less than you pay for.

WE GIVE YOU THE PROOF and ***2 Cocks Free*** for any one sent you defective.

Glauber Brass Mfg. Co.,
Expert Makers of Plumbers' Fine Brass Goods
CLEVELAND, O.

Sharratt & Newth's Glaziers' Diamonds

are unequalled for cutting and wearing qualities.

To be obtained from the principal Dealers in Glass, Hardware, and Painters' Supplies.

Contractors to H. M. Government and the principal English Sheet and Plate Glass Works

CURRENT MARKET QUOTATIONS.

Jan. 11, 1907.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

EVAPORATION REDUCED TO A MINIMUM

is one of the reasons why PATERSON'S WIRE EDGED READY ROOFING will last longer than any other kind made.

Mr. C. R. Decker, Chesterfield, Ont., used our 3 Ply Wire Edged Ready Roofing fourteen years ago, and he says it is apparently just as good as when first put on.

We have hundreds of other customers whose experience has been similar to Mr. Decker's.

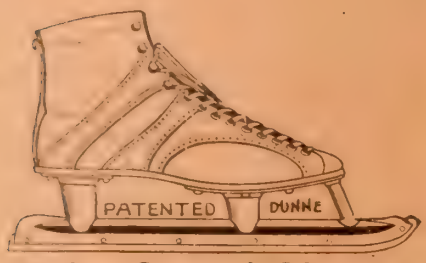
A Few Facts for the Consideration of the Man who Wants More Business

The "Sovereign" Hot Water Boiler should be recommended all the time—because **you** can make no claim for the **"Sovereign"** which it will not make good.

The "Sovereign" is the most economic boiler on the market. Hundreds of enthusiastic users say so right over their signatures.



The many devices—peculiar to the **"Sovereign"** and making for boiler perfection—which appealed so strongly to you practical men, are now universally recognized.

Note: Let us show you just how much the "Sovereign" Hot Water Boilers should mean to you from a pecuniary stand-point.

: : It Saves Lives : :

A Building Necessity

These are the names that have been made synonymous with the

AEOLIAN VENTILATOR

We are the manufacturers of it and control the patents.

We have placed it on some of the finest buildings in the Dominion.

It is a scientific fact that no modern buildings can afford to neglect sanitation.

We are contractors and sanitary experts. Our ventilator is guaranteed and is placed in position to suit the building as to quality and size.

One Testimony:

MONTREAL, June 12th, 1903.
Canadian Pacific Railway Company.
Messrs. J. W. HARRIS Co., LIMITED,
7 St. Elizabeth St., Montreal, Que.

Gentlemen,—Answering yours of June 1st, I am not personally familiar with the merits of the "AEOLIAN" Ventilators but our Assistant Engineer, Mr. F. Crossley, reports that the Ventilators of this type manufactured by you and used by this Company at the Place Viger Hotel, Chateau Frontenac, Windsor Street Station and elsewhere, have proved satisfactory. Yours truly,

E. H. McHenry, Superintendent.

Four Reasons why INVICTUS FIBRE is the BEST FIBRE PAPER on the Market

1. Invictus Fibre is made from personally selected pulp wood cut on our own limits.
2. This special pulp wood is again rigidly culled on arrival at our mills.
3. The pulp from which Invictus Fibre is made is manufactured in our own pulp mill and transferred at once to the paper mill, avoiding all drawbacks of transportation.
4. Invictus Fibre will increase in strength and not grow hard and brittle as does fibre made from sulphite pulp. This is a quality of the peculiar and selected pulp from which Invictus Fibre is made.

A trial order will convince you that we are correct. See that each package bears the words "Invictus Fibre." Every ream contains 480 sheets.

"EVERYTHING FOR THE TINSHOP"

We Have Worked Out Your Problem.

When you go home at five o'clock, there is no reason why you should have your after-dinner smoke spoiled with a lot of worries over little details of your business.

There is no need for you to jot down memoranda on the back of an envelope for to-morrow.

If your books were arranged on a proper system, they would shoulder all these petty details for you—to-morrow morning they would show you everything you want to know just at the moment you want to know it.

* * * * * *

Business Systems leave petty routine to your books.

Business Systems do the work but leave you time to think and plan and act.

Business Systems leave nothing to chance and allow no possibility of anything being forgotten.

Business Systems enable one clerk to do the work of two and to do it more accurately.

* * * * * *

We would like to go into this matter with you either in your office or in ours at your convenience.

A request to know more about Business Systems, will not obligate you.

Peerless Woven Wire Fence

Here is a fence that will sell. Once up no need for repairs. It lasts for years—just what you are looking for. It's horse-high, pig-tight and bull-strong. No stock can get over, under or through it. The most unruly animal can't butt it down and there are no barbs to tear and injure stock. It's

WIND AND WEATHER PROOF

The Peerless lock holds it perfectly rigid and the wires can't slip up, down, nor sidewise. Cold weather won't snap it and hot weather won't make it sag. It's the greatest thing out for farmers, stockmen and all other fence users which makes it a red hot proposition for dealers. It comes in rolls all ready to put up. It's easy to handle. Write for prices.

HOCKEY SKATES

One point about our line which we wish to emphasize, in addition to the unrivalled quality, is the fact that it is a COMPLETE LINE. We have a skate for every need, taste, whim or fancy. In hockey skates we produce several patterns, some of which are here illustrated. We make them in all styles, both with and without puck stops and with plain and flanged runners. The features of our line are well known to every hockey player.

We must apologize for not being able to fill all orders for our new "VELOX" hockey skate promptly. We thought we were making a sufficient quantity to carry us through the season, but, even though we knew the skate's good qualities, we were ourselves surprised at the way in which the public took hold. We have had to put extra effort into turning out the "VELOX" with the result that we are now abreast of our orders.

THE "VELOX"

THE "REGAL"

THE "MIC-MAC"

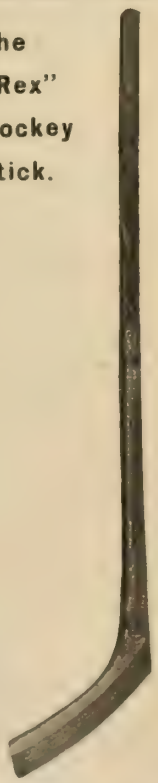
THE FEATHERWEIGHT "MIC-MAC"

THE "STARR"

THE "CHEBUCTO"

THE "BOY'S"

The "Mic-Mac," standard and featherweight patterns, have lost none of their popularity, and the sales exceed those of any previous season.



Our hockey sticks are popular with all players, because they are made of straight-grain, selected, second-growth, yellow birch, and because they are shaped and balanced perfectly. The reputation they have for durability and playing quality makes them easy sellers.

Our representative is now on the road soliciting orders for 1907-08, and will call on you shortly, but in case you would rather not wait for him, drop us a line; we are always pleased to answer letters.

THE PERCENTAGE OF PROFIT

A discussion invited on an interesting and convincing argument presented in favor of correct bookkeeping by Fred. C. Lariviere, President of Amiot, Lecours & Lariviere, Wholesale and Retail Hardware Merchants, Montreal.

Technically, the profits must be based on cost and the percentage of profits fixed according to the class, quality and appearance of the goods, and this is the only proper course. In practice, however, the percentage of profit may be computed indifferently on the turnover, either on cost or selling values. Provided the expenses are figured on the same basis, the results in dollars and cents would be the same. This is only a transposition of figures with same results as to the amount involved, for nobody would for a moment doubt that dollars and cents are what is looked for in the final results, consequently it should have the precedence over percentage, which is only an accessory. It is a well known fact that bookkeeping must be made to suit the requirements of business, and not business to bookkeeping.

As far as I know it is customary to figure the results of a year's business on the total amount of goods sold at selling prices ; but in using this method it is the business of the merchant, when pricing goods, to apply the following rule : If he wishes to realize a profit of 50 per cent. on selling value he must add 100 per cent. on cash value ; if he wishes to realize 40 per cent. he must add 66 2-3 ; if 33 1-3, he must add 50 ; add 25 ; if 16 2-3 he must add 20.

Provision must be made for a percentage of profit to sales and to capital. There is a wide difference in the two. I will explain by an example taken from actual results. A certain concern I know, started in business with $418.78, the turnover of the year at selling prices being $29,210.14 and the gross profits $6,822.28, or 23.35 per cent. ($22,387.86, cost) or equalling 30.47 per cent. on cost price. The expenses including interest and bad debts were $2,286.60 or 7.96 per cent. on sales at selling prices, or 10.21 per cent. on cost. Now let us see if the results are the same.

The profits on :

$29,210.14, selling value, at 23.35 per cent., equal $6,822.28.

$22,387.86, cost value, at 30.47 per cent., equal $6,822.28. $6,822.28.

The expenses on :

$29,210.14 at 7.96 per cent. equal $2,-$286.60.

$22,387.86 at 10.21 per cent., equal $2,-286.60. $2,286.60. Net profits, $4,535.68.

Therefore the results are the same, the net profits are $4,535,68. Now let us compare this to capital, which was $418.78 at the beginning of business. The result in percentage is 1,120.62, compared to 15.39 per cent. on selling price of sales or 20.26 per cent. on cost price of goods sold. Which is right ? Both are correct in any of the ways this problem is figured.

Capital the Only Investment.

The above statement is surely an evidence and an uncontestable proof that the purchase of a certain amount of goods by a merchant in general business is not an investment. The capital necessary for the general administration of a business is the investment, for capital not only provides for the purchase of goods, but also for carrying the book debts, the increase of stock, and meeting the general expenses of administration. If I invest $100 in a business and wait till this amount doubles itself, it is true I will have made 100 per cent. on my capital. This would be the investment, but it would not represent the result of several transactions of buying and selling and the accumulation of profits on each sale. Consequently a purchase cannot, properly speaking, be an investment. This 100 per cent. is

FRED. C. LARIVIERE.

not the percentage of profits on my sales either at cost or selling prices unless it would have been made in only one transaction, which is not the case generally in business.

To substantiate this I will submit the following examples :

A. buys $100 worth of goods. A. sells B. $50 worth for $75, making a profit of $25. A. purchases $50 worth of goods. A. sells C. $75 worth for $125, making a profit of $50. A. sells D. balance of stock, $25, for $50, making a profit of $25. Totals : Goods bought $150 ; cost price $150 ; selling price $250 ; profit $100.

A. therefore sold what cost him $150 for $250, realizing a profit of $100, or 100 per cent. on capital ; 66-23 per cent. on cost ; and 40 per cent. on selling prices ; and all these percentages are correct ; hence the different ways, with but one result of a clear profit of $100.

It should be clearly evident that the act of buying goods is not what could be termed an investment. The capital placed in the business is the investment.

I hope some other interested parties will send you their views, so that this very important question can be thoroughly studied.

GOOD BUYERS AND GOOD SELLERS.

At the recent hardware association convention across the line, S. Nowell, a St. Louis jobber, delivered a short address in which he made his hearers understand that jobbers have their troubles and emphasized the fact that selling was a much more important operation than buying. He said in part :

"God have mercy on the man who is a good buyer, but who cannot sell the goods he buys. If you are spending 75 per cent. of your time on buying and 25 per cent. on selling, reverse the ratio and devote at least 75 per cent. of your effort to selling. Every head of a mercantile house must be a school teacher. He must be teaching his clerks and his whole force up-to-date ideas on salesmanship. There is not 5 per cent. difference in the cost of the hardware stock, item for item, of the poorest buyer and the best buyer in the State of Wisconsin, but stocks do vary 25 to 50 per cent. in value as to their assortment and character. There is nothing more untrue than the old statement that 'goods well bought are half sold,' if well bought means cheaply."

RULES LEADING TO SUCCESS.

Take as much interest in your employer's business as if it were your own.

Do your work well to-day—you won't have to do any of it over again tomorrow.

Do not expect to get all you can and give nothing. Do a little more work than is demanded.

Do not let your thoughts be always wool-gathering if you expect to earn an increase of salary.

Be prompt. Show that you have an interest in your work above the desire for an extra half hour in bed in the morning. You can't come down half an hour late every morning and impress your employer with the idea that you are a wide-awake, active man or woman with an interest in your work.

Be cheerful and willing. A sullen countenance is not pleasant to look upon by either an employer or a customer. Remember, your pulling power with a customer is one of your assets. The reserve will be your loss. Be courteous. Do not thrust your troubles and inharmony upon those around you. It is a poor investment.

WINDOW AND INTERIOR DISPLAYS

PREVENTING FROST ON SHOW WINDOWS.

A. J. Quick, ventilating expert with Cluff Bros., Toronto, Canadian agents for the Thomas Acme Air Washer for ventilating buildings, in answer to a request for information regarding the prevention of frost on show windows, writes as follows for Hardware and Metal :

"The physical conditions which create frost on window panes are exactly the same as those which create moisture on cold water pipes in summer time, viz., warm air carrying its extreme complement of moisture comes in contact with a cold body and is reduced in temperature, rendering it incapable of carrying the same percentage of moisture, and what is more natural than that the excess of the latter should be deposited where the chilly process takes place, viz., in this case, on the window pane. We anticipate that some considerable difficulty will be experienced in making a window space sufficiently tight from the inner store to render impossible the circulation of warm air from the latter. In this connection we would emphasize that, if absolutely still air can be obtained between the inner and outer glass, very little difficulty will be experienced from frost even on the coldest days, and in this connection it has been found that double glass set in the same sash, leaving a space of say 1½ or 2 inches between the panes, and having the joints all around the four sides made as tight as possible, has given very good satisfaction, and apart from this construction we are not by any means sure that good results can be obtained under other circumstances.

"We do not know of any solution or wash for putting on the window panes to prevent a formation of frost."

DOES THE WINDOW EARN WAGES?

In conducting his business from one year's end to another, the retail dealer must take into account the elemental principles upon which all trade is based—he must keep a strict tabulation of all expenditures, must know exactly at the year's end what his receipts have been, and thus be enabled to arrive at his percentage of profit. Perfect business methods, says the Sporting Goods Dealer, consists in keeping these different transactions or items on a money-making plane. That is, when a certain bill of goods is bought, it should be sold at a figure to allow a certain profit ; when a salesman is employed, the proprietor naturally expects him to bring back into the cash box the amount of his salary, and some more ; if advertising is carried in the daily paper elsewhere, a full return for money expended is looked for. These various returns often do not come up to expectations, for one cause or another, and this marks the degrees of success attained by different merchants. Now there is one phase of the retail dealer's business that he is apt to be careless about and therefore not realize a full return on the expenditure—that is the display window. The cost of maintaining this exhibit is a just charge to the wage account, exactly as is the salary of a clerk or salesman. Without windows the rent would be much less, so there is every reason for giving special attention to making it a business-bringing feature. The show windows may be considered an employe, and an expensive one. The time of an assistant to dress the window, the cost of working tools and paraphernalia are some of the expenses that may be charged against it. The question remains, does the window sell enough goods to warrant this expense ? With the aid of counter books the dealer can keep track of the work of his salesmen and determine what returns they are bringing. In the case of the show window this is not so easy. More time and continued experimenting is necessary to investigate the business brought into the house by the outside exhibit.

The proprietor expects his salesmen to be constantly bright, pleasing and wide-awake ; he should make his display window the same. There are unlimited possibilities open to the dealer who considers the window dressing proposition in a serious light. By a careful record of the sales of each class of sporting goods during a specified period, and comparing one with the other, bearing in mind when and how the different goods were featured in display, he can form a very satisfactory estimate of the benefits being obtained from this method of publicity. As has been stated time and time again, the display window is probably the dealer's best business getter. Unlike the salesmen and other employes, the window may be asked to work day and night, and there are no holidays or vacations to be considered. But again, unlike good employes, the window needs constant looking after and shaking up. It is apt to get slovenly and out-of-date unless proper attention is bestowed upon it. Its success, therefore, rests with the dealer himself. It is up to him.

THE IMPORTANCE OF DISPLAY.

It is just as necessary that the hardware merchant should dress up his window and put on a "front" as it is for the haberdasher or the dry goods dealer. There is money in the show window, and it rests with each dealer to get it out. "Put your best foot forward" in commercial life as you do in the social world.

Don't, above all things, make an attempt to make a display unless you intend to do it right. Don't bundle a confused mass of articles into your window and "let it go at that." Make it a show window and not a "holy show" window. If you think you haven't the time or you lack the knack of arranging the articles in an artistic manner, encourage one of your clerks to try and develop ability in this line. It will be money well invested. What so quickly engages the public eye as a tastefully arranged store window ? It acts as a magnet which draws the elusive coin to your till

CARD WRITING.

It is not such a difficult matter to write show cards, but many merchants have never made the attempt which might show them that they are capable of producing a really respectable card by means of the pen or brush. Some merchants hardly use cards at all, others rely upon the rubber-stamp outfit. Clerks who might eventually develop great ability in the show-card line are hampered by the instruction of employers who cling to old ideas and fail to see the possibilities of new ones. Then there are the men who attempt the work without any apparent desire for excellence. Their crudity makes them an exhibit which attracts attention—and fails to attract custom. To the first class of card-writers we would say : Learn show-card writing, and to the second class we would say : Learn show-card writing.

By this is meant not necessarily the highest form of card-writing, which at the present day has come to be even a profession in itself, but the proper way to make a card, no matter how plain or simple it is. It is impossible in one lesson to teach show-card writing, but a few primary suggestions may be helpful.

One of the first causes of poor work is a failure to appreciate the value of simplicity. In almost every case the plain card is the best, and it is the first which should be studied. But so-called "fancy" lettering, and scrolls and furbelows have a fascination for some people, and as produced by them they are an abomination to others. They cannot be read at a glance, sometimes, indeed they are next to indecipherable. Legibility is a prime requisite in a show-card; anything hindering it should be most carefully avoided. In the same class with "fancy" schemes may be placed old-fashioned styles of lettering—not the genuine "old styles," which are among the best letters in use to-day, but the freak fashions which appeared in type, roughly speaking, between the years 1850 and 1890, and which even yet, in some localities, the unfortunate country editor is compelled to employ.

Taking it all round, country newspapers although a good thing to support, are a bad place to look for good type faces, but the large city dailies and the magazines which at some time or other reach the most out-of-the-way part of the country, contain models which every dealer having to do with window-cards would do well to study, choose from and copy. Of course in most cases a type printed letter must be modified to a certain extent when used for show-card work. It always pays to do the work well, but it doesn't pay and isn't necessary to spend the time on a temporary price-card that it would take to letter a permanent sign. Show-card writing and sign-writing are two different trades—or professions, for you can be an artist in either of them—and the very best cards are written by some of the fastest workmen.

SPORTING GOODS

BIG YEAR IN SPORTING GOODS.

Dealers from various parts of the country report 1906 to have been the best season in the history of the trade in Canada, the increases in the volume of trade reported, averaging from 10 to 50 per cent, the general prosperity, and the fact that most people have had money to spend on amusements and recreation, being largely responsible for the growth of this branch of trade.

Winter sporting goods sold particularly well during December, one Toronto firm reporting the sale of over 500 toboggans ranging in price from $1.50 to $7.50, the average being about $5.00. Another sporting goods dealer disposed of over 200, selling 25 on one Saturday before Christmas. A feature of the toboggan trade has been the increased demand from the smaller towns and cities where this old time sport is gaining remarkable favor.

Snowshoes have also sold in fair quantities, although the demand has not been so great as a year ago, owing to the large number sold last winter and not used because of the lack of snow. The demand this year has been better in the country districts than in the larger cities. On the other hand, skies have sold better in the larger cities, the customers being chiefly the children of the wealthier citizens.

Ice skates have sold remarkably well, shortages being reported in many districts. Much stock was carried over from 1905, but the demand this season has been so great that stocks will be very light when the present season closes. Sales, will of course, continue until the end of February. Hockey skates have met with the greatest demand. A very profitable side line with many dealers has been boots for hockey skates, one dealer stating that he had sold 1,000 pairs of shoes already this year. Sweaters, mocassins, etc., have also been in active demand. The continued popularity of roller skating has made it possible for many dealers to work up a fair trade in this line, the Harold A. Wilson Company, Toronto, having sold 600 pairs within the last few months. The Henley and Union Hardware Co.'s lines were the chief sellers. The holiday trade in air rifles was also very good, while revolvers continue to have steady sale.

The trap shooting season is now on, and the demand for ammunition is very active, rifles also selling steadily. A line which sells largely in the trap shooting season, is the blue rock imitation birds, manufactured by J. Bowron, Hamilton, Ont. The Dominion Cartridge Co.'s ammunition is also a popular seller. Many dealers are now pushing gun supplies for the different gun clubs which make a specialty of trap shooting, and for the next couple of months, the best possibilities for making trade is in pushing shooting goods.

Gymnasium supplies and fencing goods, have of course, sold well ever since cold weather arrived, there being a steady increase noticeable in both of these branches of the trade.

Dealers are now preparing to get after the business placed by golf, baseball, cricket, lacrosse, football and tennis clubs, the present being an opportune time to circularize and make personal calls on the secretaries of these organizations, quoting prices on the supplies necessary for the coming season's sports. Preparations are also being made for an active trade in boats, canoes, fishing tackle, the season for which commences about the middle of May. Camp supplies will be another line which will demand early attention.

EARLY ENGLISH GUNPOWDER.

A bucket containing bullets and gunpowder has been discovered in the roof of Durham Castle, where it is believed to have been walled up about the year 1611, when the castle was being prepared to withstand a Scottish raid. The bullets are molded spheres of two sizes, and, according to the analyses of Messrs Silberrad and Simpson, consist of a little over 99 per cent. of lead, with iron and silver, and traces of bismuth, arsenic, and antimony. The gunpowder is not granulated like that of the present day, and was evidently prepared by simply mixing the ingredients. It contains about 1 per cent. of moisture, and the proportion of the constituents calculated on the dry powder is practically identical with that of the black gunpowder of to-day, viz., nitre, 75 per cent.; carbon, 15 per cent.; and sulphur, 10 per cent. It is pointed out by Messrs. Silberrad and Simpson that this is a remarkable fact, since the gunpowders made in England at that time contained a considerably larger amount of sulphur. The only gunpowder with the modern proportions in use in the seventeenth century was Prussion musket powder, and hence it is suggested that the Durham powder was probably of Prussian origin.—Knowledge.

GUARANTEED FOR THREE YEARS

In the future the Horton Manufacturing Co., Bristol, Conn., have decided to guarantee their "Bristol" steel fishing rods for three years, instead of one year, as heretofore. The three-year guarantee applies to all "Bristol" rods sold since October 1st, 1906; that is, rods which were shipped from their factory since that date. This is an excellent proof of their faith in the rods and should make a good selling argument for the dealers.

AUTO SUPPLIES.

There seems to be a unanimity of opinion as to the advantage of putting in a line of auto accessories or supplies in the hardware store in cities of the right size, says the Hardware Dealers' Magazine, which has been making an investigation of the results secured by United States retail dealers who have stocked the line.

In small towns where there are only one or two automobiles it is obvious that the dealer would not find it advantageous to put in a line, and on the other extreme are large cities where specialty stores control most of this line. Between, however, are many cities wherein the enterprising dealer can gradually feel his way and put in a stock of the smaller supplies. As the automobilists become informed of the dealer carrying such a stock his trade ought to pick up.

As a rule the man who runs a car has money to spend for many of the new things that are being constantly brought out. Something about his car needs replacing, now and then spark plugs give out, batteries become exhausted, tires burst, some of the wrenches or other tools break or get lost, pumps give out, carbide oils and greases are being constantly used up, lamps get in smash-ups, speed indicators frequently get hold of a man's fancy, and possess one he must, and so on with almost no end. The automobile, unlike the bicycle, is not likely to be a fad; every indication points to a large accession to the ranks of autoists. It therefore behooves the wise dealer to get in on the "second floor" and "grow up" with the business.

CRIME INCREASES BUSINESS.

Retailers of firearms in Pittsburg have for some weeks carried on a tremendous business in firearms and other weapons of defence as a result of a long series of burglaries and other crimes that has visited the community. Revolvers for both home and pocket have been in great demand. It is noticed that the ideas regarding pocket weapons have experienced a change, for the larger calibres have had the largest call. It seems that the 32-calibre revolver is not considered sufficiently effective by the people of Pittsburg who wish to be prepared to receive midnight prowlers.

TO BROWN GUN BARRELS.

Take 1 ounce muriate tincture of steel 1 ounce spirits of wine, ½ ounce muriate of mercury, ½ ounce strong nitric acid, ½ ounce blue stone, 1 quart water. Mix well and allow to stand 30 days to amalgamate. After the oil or grease has been removed from the barrels by lime the mixture is laid on lightly with a sponge every ten hours. It should be scratched off with a steel wire brush night and morning until the barrels are dark enough; and then the acid is destroyed by pouring on the barrels boiling water, and continuing to rub them until nearly cool. If the barrels are of laminated steel do not dilute the acid so much.

RETAIL HARDWARE ASSOCIATION NEWS

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

WESTERN DEALERS TO ARMS.

The following circular has been sent to the four hundred members of the Western Retail Hardware Dealers' Association by Secretary McRobie, and if each member does his part as well as the energetic "Mac," the vigorous protests of the "four hundred," following the action of thousands of hardware, dry goods and other merchants in other parts of Canada, should make certain the withdrawal of the Postmaster General's proposed legislation.

A Vigorous Letter.

You have probably read in the trade journals or the daily press of the proposed regulation regarding a new parcel post c.o.d. collection system.

Do you realize what this means to the trade? If you do, then we ask you as merchants whose business is jeopardized to wake up and defeat this iniquitous measure. Such a system, if put in force, would encourage farmers and townspeople to send to the departmental stores and have their purchases sent by mail c.o.d., the local postmaster collecting the bill and returning the money.

We want you to write your local member of Parliament urging him to see the Postmaster-General, and oppose the proposed system; also, personally write the Postmaster-General, protesting against the measure; interview the editor of your local paper, and arouse his interest, pointing out to him the loss he will sustain eventually in advertising, etc., if the measure goes through.

The parcel post question is an important matter. Mail order houses in the United States secured similar legislation, but it was repealed owing to the activity of the members of the Retail Hardware and other associations in flooding the Postmaster-General with protests.

Show that you are alive to your interests by protesting now, and by so doing you will not only ward off the present danger, but you will make the law-makers realize that measures affecting the interests of thousands of merchants cannot be sacrificed in order to satisfy the grasping desires of departmental stores.

All merchants should stand firmly together and combat this legislation. We therefore trust that you will take this matter up with your fellow dealers locally, and write both your local member and the Postmaster-General before the 1st of February. (No postage stamp is required on letters sent the Postmaster-General). Yours truly,

J. E. McRobie, Secy.-Treas. A. J. Falconer, President.

P.S. Don't forget the association's annual meeting which will be held on Tuesday morning, February 12th, at 9 o'clock, in the Scott Block, 271 Main St., Winnipeg.

A GOOD EXAMPLE.

That the hardware trade is alive to the danger of the legislation outlined by the Postmaster-General in Parliament on Dec. 7 last, is proven by the energetic manner in which they have taken up our suggestion that they write letters of protest to their local member of Parliament as well as to the Postmaster-General.

The trade realizes that the proposal to establish a parcels post c.o.d. collection system is inspired by the departmental store millionaires and the retail dealers are not willing to lie down and be trampled upon without showing that they are men capable of upholding their rights.

Numerous hardware dealers in Ontario have written commending the active campaign being conducted by the Ontario Retail Hardware Association, and many are forwarding their membership fees to the organization, which is actively working in their interests.

One of the new firms which, although not in the association in 1906, has forwarded the $3 fee to cover the membership fee for 1907, is J. L. Fenn, Sons, & Co., Bracebridge, a wholesale and retail firm which is not afraid to put its shoulder to the wheel and do their share of pushing in the interests of the trade as a whole. They say:

"We might say that we are strongly opposed to a measure such as is proposed by the Postmaster-General, and we will do all we can to assist the association to protest against such legislation. We wish the association every success in anything they undertake to assist the retail trade."

Draft Form of Letter.

..... 1907

To the Honorable Mr. Lemieux,
Postmaster General, Ottawa.

Dear Sir,—We understand that you are preparing an amendment to the law providing for the existing parcels post system, the said amendment being intended to provide for the collection on delivery of parcels. Such a system would enable mail order houses to send goods c.o.d. to any part of the country in competition with local retailers.

The large departmental stores are already injuring local merchants to a tremendous extent and any change in the postal laws which would favor them would be a great injustice to the thousands of merchants who have their capital invested in the small towns and cities throughout Canada, aiding by their presence, their energy and their taxes in the up-building of the small communities upon which Canada's future prosperity must depend.

We do not ask for any special privilege and protest against the mail-order houses being given any favors. The proposed legislation would tend to reduce the number of retailers, thus destroying competition, depreciating the value of real estate in the towns and having a similar effect upon the farming districts, as well as tending to decrease the opportunities for pleasure enjoyed by the farmer's family. The deserted farm districts of the New England States are an object lesson to avoid.

We trust that you will see the fairness of our argument that the legislation would be detrimental to the continued progress and development of this fair Dominion and we would ask that you reconsider your announced intention of introducing the proposed amendment.

Yours very truly.

Charles Richardson, the manager of the Dominion Cement, Paint and Roofing Company, died last week at his son's residence in Toronto.

EFFECTIVE ADVERTISING

Merely Introductory.

There has been more unadulterated nonsense written about "advertising" during the last decade than on any other subject of interest to mankind always excepting, of course, "Race Suicide" and "The Annexation of Canada by the United States."

All Advertising Good.

Mr. Retailer: jump in right now and advertise—if you've never done it before! Don't be barred out of the publicity columns of your local papers because you can't write as pretty an ad. as the fellow round the corner. An old Scot had just swallowed a glass of whiskey when a crony inquired: "Is that good whiskey, Sandy?"

"Good whiskey!" wrathfully ejaculated the old man. "All whiskey is good; but some brands are better than others."

Despite the assertions of many advertising experts I am inclined to think that all advertising is good, but—some ads. are far more effective than others. Even when John Smith merely declares that he has a certain line of goods for sale John Smith is not producing bad advertising. I have studied the methods of advertisers all over the British Empire and the United States, and I have yet to see an ad. which could be considered as damaging to the business of the man who produced it. The moral is double-barrelled: advertise and—keep on advertising.

The Fundamental Essential.

The primary essential for the retailer, who produces his own copy, is a thorough knowledge of his business its wants. Some of the best advertising copy I've seen was produced several years ago by a Chicago retailer. That copy was so strong and effective that the gentleman referred to cleared a rich fortune in a few years. He became somewhat careless regarding the management of his business. He lost a knowledge of its needs, but still continued to produce the advertising good, strong stuff it was, too; but lacking knowledge of the wants of his business, the copy has lost much of its old-time power.

Never Tell a Lie.

Truth is more necessary in your advertising copy than in a preacher's discourse. Don't exaggerate. The merchant who makes exaggerated statements regarding his goods strikes common-sense people in the same way as the fellow who swaggers along the beach in a loud suit. "There's nothing in him," they say—referring to the swaggerer and, well—enough said.

A good way to judge your copy is to leave it aside for a day or two and then revise it. You'll find, as a general rule, that you have spread yourself too much. You'll be able to strengthen your copy in almost every case by cutting out a few sentences.

Study Your Trade.

This is an important point that most retailers seem to overlook. They produce ads. in a kind of happy-go-lucky way without studying their customers at all. Fancy yourself where the other fellow is occasionally.

Women Are Landed Differently.

Be "peppery and to the point" when writing ads. you wish to appeal to men. But don't talk to women that way. A woman wants to see the name of the articles and the price right at a glance. Then a detailed account of the article will interest her after the price has.

Good Intentions.

I intended to criticise two ads. in this article; but these general remarks seemed to be necessary. In another issue we'll have something to say about Jas. Simmonds & Co.'s ad. which we consider just about as good as any we have seen for a long time. Some practical ads. used some time ago by O. M. Hodson will also come in for a word of commendation. We will aiso reproduce a pretty strong ad. forwarded by D. Brocklebank & Son.

Have any other dealers samples of advertising matter to send for criticism?

T.J.S.

ORIGINAL ADVERTISING.

An original form of advertising comes from Russia, where a retail dealer recently circulated the following announcement among his customers: "The reason why I have hitherto been able to sell goods so much cheaper than anybody else is that I am a bachelor and do not need to make a profit for the maintenance of a wife and children. It is now my duty to inform the public that this advantage will shortly be withdrawn from them, as I am about to be married. They will, therefore, do well to make their purchases at once at the old rate." The result of this unique proclamation was that such a run on the shop ensued during the next few days that the dealer made money enough to pay the expenses of his wedding on a very lavish scale and leave a snug bank account besides.

Merchants who advertise in their local papers should stir up the editors to do something for the town's business on their own account. The accompanying display is a reduced reproduction of a clarion call five inches deep and eight across the top of the front page of a Kentville, N.S., paper. In the same issue the editor said:

"Several of the other towns are holding or have held a merchant's day this season and as will be seen elsewhere in this issue the Kentville merchants have fallen into line and are prepared to meet the outside competition. Every day from now on is Merchants day in Kentville. During the next two weeks we respectfully request our readers to peruse the advertisements in the Chronicle very carefully. Every one will find something interesting."

KENTVILLE MERCHANTS

All Stores Open Every Evening Until Christmas

Are prepared to meet ALL the Outside Competition

Every Day a Merchants Day from now until Xmas

All the Merchants are PUTTING FORTH EVERY EFFORT to supply your wants with the best goods for the least money. Visit the business centre of the valley and get your money's worth.

This is a good line. The Nova Scotians are to be congratulated and merchants in other parts of Canada should give their local publishers a pointer. This kind of thing shows a town is awake and gives the outsiders an impression that their trade is appreciated. It might also stir up a little latent civic pride and that's what is badly needed in a good many Canadian towns.

GET THERE OR GET LEFT.

"I don't see," said John Jones, the hardware dealer, "how James Smith gets so much more of the furnace business of this locality than I do. I surely am better fitted to take care of it than he is."

"You make the mistake," said his friend, "in this strenuous age, of supposing that business always comes to those who are most capable of taking care of it. On the contrary, they are generally passed in the race, as in your case, by those who make the most strenuous endeavors to secure the same. In other words, present-day commercial success is a case of fight rather than fit."

STOVES AND TINWARE

CLEANING A FURNACE.

The practical work of furnace installation and the designing work—that is, making the plans—are now widely separated in many establishments and often times an engineer, while thoroughly acquainted with the details of furnace work as they are laid out on paper, still knows little of the practical work of installation, and the mistakes that are made not only by the mechanics, but by those who lay out the work. A man who probably spends more of his time over the drafting board than with the hammer or snips, recently told the following story in the Metal Worker, which may be of interest to both branches of the trade.

The Base of the Chimney.

"Several events led up to my taking upon myself the task of cleaning the furnace in my cellar. I had spent a somewhat lengthy vacation at a better watering place than I could afford and was unable to stand the financial strain of having a real authorized furnaceman come in, but I wish I had. After this one the rest of the excuses are unnecessary. I went down to the task with my old clothes on and succeeded in disconnecting the smoke pipe. I found in so doing that the builder had left a square hole in the chimney which when the furnaceman came around he blocked with fire clay. I scraped all of this out and after I had emptied the soot out of the smoke pipe and found that it was sound, turned my attention to removing the accumulation of soot from the chimney. This was not built as I should like to see it, for I certainly believe a chimney would give better service if there were a space at the bottom below the smoke connection so that soot can fall down and be removed through an opening in the chimney near the basement floor. This opening should, of course, be thoroughly blocked up with fire clay when the fire is first started, otherwise the draft is sure to be poor.

Readily Cleaned Register Boxes.

"The next thing to do was to take off all the hot air pipes so that I could remove the bonnet. This was not much of a task, as the different lengths had been soldered together, but the joint between the base of the register box and the elbow of the run had just been shoved together, as was also true of the connection to the bonnet. I find that the furnaceman in hanging the pipes had not been careful to secure as good an alignment as he could and also that the pitch of the pipes varied considerably, in some instances the pitch being greater at the farther end than near the furnace. The register boxes on the first floor were all taken out and cleaned and the accumulation of dirt and dust in them certainly was astonishing. I believe if furnacemen generally knew how much trouble it takes to clean a register box which has the connection to a straight pipe made by cutting and bending over the end of the pipe, instead of double seaming it, they would be willing to pay the slight additional expense, for the latter is certainly a great improvement and one which is appreciated by the housewife.

Accessible Cold Air Duct.

"When I came to lift the bonnet off I found that instead of using clean good sand in the sand ring, coarse gravel and dirt had been used instead, which when dry blew over the cellar to a considerable extent and called forth remarks on the part of the housewife as to what a dirty thing a furnace is. The castings I found had an accumulation of rust, which, while not thick, still was considerable, and when I thought of brushing this down into the cold air pit at the bottom I wondered how I could ever get it out, as the cold air pit was built in the cellar floor with a concrete top. Not wishing to take the whole furnace down I concluded to let the dirt remain, but I do think it a very unwise practice, particularly in a first class job, not to leave an opening so that the pit under the furance can be cleaned as well as the cold air box. The greatest objection to furnaces is the dust, and if means were taken for removing this dust periodically there would be much less to complain of. In this furnace I am going to have such an opening made another year, and feel confident that I will be amply repaid for the expense."

STOVE SALESMANSHIP.

What are you in business for? The old answer, "to make money," is too loose and indefinite, and needs to be qualified to be of any benefit. The methods by which you made money last year may seem utter folly to you comparing them with the methods adopted for this year.

A merchant should always be after profits and any proposition not likely to ensure the getting of such profits is not in these days good business. Do not let any condition of competition, local or otherwise, switch you from this idea. At times it seems almost impossible to maintain business on this basis because of some competitive factor, but bear in mind that the successful merchant is he who meets the condition without sacrificing his present or future interest. An easy solution to the problem is to do what others do, but this is oftentimes unprofitable.

The next question which would largely aid you in the hunt for perpetual profit is salesmanship. The ordinary conception of salesmanship is the manner and argument which a salesman puts up when confronted by a possible customer. We might think of it as some clever trick which a salesman only displays when a victim arrives. But it is a great mistake, as the class of goods should be studied very closely, comparing them intelligently with several other well known lines. Procure the exclusive agency of some well known stoves and heaters and give your undivided attention to this particular line.

Salesmanship includes everything that tends to advance the business. Supposing there is a family that wants or can be made to want, a stove. You have the stove. Salesmanship is the connecting link between that family and your stove. Whatever exercises an influence, good, bad or indifferent, upon the transfer of your stove to that buyer is the part of the salesmanship of your institution and must be examined, judged and adjusted from that standpoint. A dingy store front discounts the salesman's argument. Many spoil it. A dirty delivery wagon is also a very poor sort of an invitation to call again. A coat of fresh paint often benefits trade more than a cut price. What happens after the buyer reaches the article required—the merit of the thing, the argument, the price and the terms—are the points that clinch the sale.

RENOWN STEEL RANGE.

The Guelph Stove Company will enlarge their plant to accommodate the new line of steel ranges which they are preparing to manufacture. N. L. Stewart manager, and M. Kelly, the superintendent, returned from Detroit last week, after completing a deal for the purchase of the Canadian patents on the modern "Renown" steel range, manufactured in that city by the Independent Stove Company. The range will be made by the Guelph company under the name of the Great Idea steel range. As the Independent Stove Company is composed of men of Canadian birth they have arranged with the Guelph works to handle the Canadian output on all further patents that may be taken out. Walter R. Faulkner, who for some time represented the Independent Stove Co., has been secured by the Guelph Stove Company to represent them in Eastern Ontatio. As Mr. Faulkner is perfectly conversant with this range he will be of great assistance in helping the Guelph company to make this stove a popular seller on the Canadian market.

DEMAND FOR ENAMELED WARE.

An Englishman in China says that the people of even the remote districts are becoming purchasers of foreign cutlery, electroplated ware, and enameled ware. He adds: "Where one used to see a chinaware basin or wooden tub among the odds and ends of a Chinese traveler's baggage on board ship or on land, the enameled is now prominent, and, being unbreakable, it has come to stay and to oust the more fragile article. There should be one in every household in China, and even far away Tibet is importing them across the Indian frontier. The same remarks apply to glass or glassware, lamps, and hardware. There is an ever-increasing desire to possess such goods."

The rebuilding of Manchuria is being carried on so vigorously in repair of the damages of the great war, that the demand for metals and metal goods is enormous, due both to the war and to the evolution among the natives in favor of European instruments of labor. The use of galvanized corrugated iron is also very extensive, mainly for roofing and warehouse purposes.

AMONGST THE SALESMEN

TRAVELERS' BENEFIT.

S. R. Wickett, the new president of the Commercial Travelers' Mutual Benefit Society, has probably had a longer experience on the Board of that institution than any other member, having given his services to this society for upwards of twenty years. He was vice-president in 1898, and again in 1903, and president in 1904. His great business he is a Methodist. He is a member of the S.O.E., and Masonic Orders. Affability has always been a great help to the society. A native of Devonshire, England. He came to Canada in 1855. After a common and High School education, he entered upon the business of leather manufacturing. Coming to Toronto in 1881 he erected a building upon the present location of the extensive factory of Wickett & Craig, of which he was the founder. Mr. Wickett is also a director on several fire and life insurance boards. In politics Mr. Wickett is a National Policy advocate, in religion fable and courteous, Mr. Wickett is one of the best-liked men in the Travelers' Mutual Benefit and in a much wider circle of friends.

Retiring President Joseph Taylor.

Joseph Taylor, the retiring president, has served on the Board as Trustee, Vice-President and President in all about nineteen years, and much of the success of the society is due to his untiring effort in its behalf. He was for fifteen years one of the most active and prominent directors of the Commercial Travelers' Association. He was born in the village of Husthwaite, Yorkshire. On coming to Canada he traveled for Kilgour Bros. for twenty-six years, leaving that firm to return to England, where he spent two years. Returning to this country he engaged with the Canada Paper Co., with whom he has been for the past four years. The world has dealt kindly with him in every way, and it is to be hoped he may yet have many years of activity and usefulness.

PRACTICAL TALK BY SALESMAN.

Geo. West, Toronto, who is the newly elected first vice-president of the Canadian Commercial Travelers' Association, is senior member of West, Taylor, Bickle & Co., manufacturers of brooms, brushes, woodenware, baskets, etc., Norwich, Ont. In conversation with Hardware and Metal last week he said:

"I have had the pleasure of calling on the grocers and hardwaremen of Ontario for some twenty-five years and close observation of the methods of the different men in their lines of business, leads to the conclusion that the man who looks closely after the details (and there are many) is the successful man. This applies equally to office and stock.

President S. R. Wickett.

"As an instance of this: Mr. M—— went into business in 1870 and sold out in 1890, taking enough out of the business to live easily for the balance of his life, but being a comparatively young man, was not satisfied to lead an idle life and went into manufacturing, which proved a failure and he lost what he had made in his first venture, but nothing daunted he procured a stock of hardware and started again in an entirely new district, applying his old methods of looking strictly after the details; and, keeping everything in stock that would likely be called for, from a needle to an anchor, he soon recovered lost ground. The saying goes that if you cannot get an article at any other place in town, go to Mr. M——, he is sure to have it. This opens a new account for him. The customer reasons that if he has the article that is not called for every day he is sure to have the one that is.

"There is nothing that hurts a business so much as being continually out of some line of goods. There are times when it is unavoidable, but this should be the exception and not the rule."

BREAKING IN NEW SALESMEN.

For breaking in new salesmen a Cincinnati wholesale house recently originated a method that has since been adopted with great success by other houses. When a young man is sent out on the road he is allowed to pursue his way for about a week, when he is recalled by a laconic telegram: "Come back at once." When he reports he is taken into the general manager's private office, and there he is immediately taken to task, the general manager opening on him with a volley of questions that would make the ordinary man boil over with anger. The salesman is given a chance to recover his breath and start to explain why he has not done better, when he is interrupted with another volley of questions of a nature to arouse his ire.

If the young man loses his temper he is at once discharged, but if he takes it calmly without trying to get back at the "boss" and without stinging sarcasm or show of temper, he is informed that they have been trying him out to see how he would deal with an irritable customer, and he finishes out his trip and becomes a "regular" on the salesman force.

RETAIL METHODS BEST.

"Give us the retail dealers," says Warden Platt, of Kingston Penitentiary, after five years' experience of selling binder twine direct to the farmers who are the consumers. The statement should be recorded, as it proves a strong argument in favor of manufacturers doing business through regular trade channels rather than selling to consumers direct. Here is Warden Platt's statement in full:

"We started in last year with 350 tons and only sold about 200 tons—less than half our possible output. Our twine was as good as any on the market. Our price was two cents below other twine of the same grade. But our terms shut us out, and our terms will always shut us out. Farmers will not send cash for any article they cannot see, and many of them cannot send cash because they have not got it. To get up clubs costs money and increases the price of the twine. Competitors take advantage of our terms and misrepresent the quality of our twine. Altogether the outlook is discouraging. We should be able to run the mill all the year. Give us the retail dealers—give us the market on equal terms with our competitors—and we will sell all the twine we can make if we run our factory night and day every month of the year. If we cannot have the market, why run the factory? All this I say after five years' experience with the present system."

This paper is not an advocate of prison labor—particularly if the government uses the advantage they possess in the way of cheap labor to encourage price cutting by selling twine at two cents per pound less than other manufacturers can market the article at. We reproduce the statement merely for the purpose of drawing attention to the endorsation given the accepted methods of reaching the consumer through the retail trade.

On the surface it would appear that it would be cheaper for manufacturers to sell direct to consumers—that the middleman's profit would be saved if he was done away with. The above, however, is a practical example showthat such is not the case—that, in reality, it costs more to go to the consumer and, in fact, practically presents an insurmountable barrier to trade to attempt to do so when selling goods in quantities.

When business is done through the retailer the farmer deals with a man he knows and he has a guarantee he values. The retailer knows the farmer and can wait till harvest is over for his money if necessity requires. The retailer buys in large quantities and gets lower freight rates by so doing. He, in fact, gets up a farmers' club, takes all the risk, buys in large quantities knows what he is buying and the men from whom he buys, and then turns over the goods in small quantities, delivering at such times and places as are convenient to the different customers.

In return for this the retailer gets a small percentage of profit, a percentage which would otherwise go towards paying higher freight rates, a bookkeeper's wages for keeping track of the numerous accounts of a business done by making small shipments to consumers. The retailer earns his profit both by his labor and by the use of his credit in acting as the purchasing agent for the consumers. And, as shown in Warden Platt's statement, the local dealer can sell even cheaper than the manufacturer who tries to do a direct trade.

The many seizures of fraudulent binder twine during the past year present another argument why the farmers should do business with the local dealers who stand behind the goods they sell. If twine is not up to the standard it would be far easier to get satisfaction from a business man in the farmer's own locality than from some manufacturer or agent whose place of business is a long distance away.

FOR BETTER FREIGHT HANDLING

Shipping interests in Montreal are taking steps to see what can be done to form a terminal company to handle freight on the wharves. The congestion at the railway terminals in Montreal has come to such a pass that shipping men are preparing now to save themselves the possibility of any loss next season. It is believed that were a company formed to handle all freight there would be no congestion or trouble of any description. The idea at present is to form a company which to all practical intents and purposes would be the Harbor Board. This terminal company would receive the freight arriving in Montreal by the different railways, and charging the railways a sufficient sum to cover operating expenses, would deliver the freight to its destination. Any surplus which might be left at the end of the year would be refunded to the railway companies in amounts varying according to the business they had given the company during the year. This arrangement, it is thought, would be eminently fair to all concerned, and would ensure the wharves being kept reasonably clear of freight at all times.

FREE SCHOOL BOOKS.

The Ontario Government is thinking of adding to the cost of public school education by supplying text books free throughout the province. The socialistic idea is spreading pretty fast just at the moment. It may at first blush look reasonable that if education is to be free the necessary books should also be free; but it is largely a question of cost and if the cost indirectly is going to be greater than at present, where's the gain?

The retail booksellers waited on the Minister of Education at Toronto the other day and protested against the taking away of one of their sources of revenue. They put forward the cogent reason that the cost of Government distribution would not be less than the present retail profits on school books. There are many considerations in this question of cost. For instance, what is the life of a school book? In Toronto where the Board of Education provides free text books an extensive repair department is maintained, which greatly prolongs the usefulness of the average book. In rural districts this would be impossible without doubling the cost of transportation by having books sent to a central depot for repair.

Most general merchants are directly interested in this question and should express their views to their representative in the Legislature.

KEEP UP THE FIGHT.

A leading Hamilton retailer writes that his local M.P. has advised him that "it is not likely that a bill will be introduced in Parliament to amend the parcels post system, as the Postmaster-General has the power to adopt the proposed c.o.d. amendment without introducing a bill in the house."

This emphasizes the necessity of adopting the suggestion that the retail merchants of Canada fairly bombard the Postmaster-General with letters of protest against the proposal. He should be made to understand that by putting into effect the proposed legislation he is benefiting a handful of wealthy mail order merchants at the expense of thousands of retail dealers throughout Canada. Get after the Postmaster-General and camp on his trail until the proposal is withdrawn.

Similar legislation was recently proposed in England, but the retail merchants adopted the suggestion of the trade press and on a certain day fairly flooded the Postmaster-General's office with protests. They kept up the fight and had the satisfaction of seeing the legislation killed. The same tactics have been used successfully in the United States in combatting the ever-greedy mail order merchants and they can win in Canada if the fight is kept up.

To come nearer home for an illustration. A year ago Postmaster-General Aylesworth denied the use of the mails to the "Appeal to Reason," a socialist weekly published in Kansas. Canadian socialists sent thousands of letters to Ottawa, and the article by Eugene V. Debs which had caused the suspension of the paper was reprinted in Canadian papers as well as in circular form. They kept at it till they gained their point and won a victory for the freedom of the press in Canada.

While it must be admitted that the Postmaster General has almost autocratic powers and is to-day acting as a press censor dictating what Canadians can or cannot read, it is doubtful if he will go so far as to attack the thousands of retail merchants and deprive them of the means whereby they earn their livelihood without first securing the consent of Parliament. His announcement in Parliament on Dec. 7 last, in which he promised to fully inform the House when his plans were completed, indicates that he recognizes the rights of the people's representatives in the matter. If he disregards Parliament on this point it is a matter between the members of Parliament and the retail merchants whose interests the former are supposed to conserve.

The moral is plain. The Postmaster General is the one to whom protests should be sent. And it won't do to wait for the legislation to be introduced in Parliament as has been suggested by the Retail Merchants' Association. Protest to the Postmaster General at once in some such letter as is suggested in the Hardware Association page in this issue. Also send a petition signed by every retailer in each town to the local M.P., asking him to see the Postmaster General and urge the withdrawal of the suggested amendment. And, still further, ask the editor of the local paper to point out the dangers of centralizing all wealth, educational advantages, etc., in the big cities and have him send marked copies of his paper to Ottawa. Farmers who own property in town or country, the value of which is likely to be depreciated by the closing of stores, should also be asked to send in their protests.

There is plenty of scope for action. Much depends upon the life put into the protest. So far as possible this paper will help to keep the trade posted as to the progress of the agitation. But it rests with each individual retailer to do his part along the lines suggested.

Cutlery, silverware, tools, enamelware, sporting goods, paints, wall paper, stoves, wire netting, and numerous other hardware lines are already being sold in large quantities by the mail order houses. The Postmaster General suggests legislation to further extend this trade. Shall it be allowed to go through without protest?

CALENDAR ADVERTISING.

There are few branches of business in which more money is wasted than in the publication and distribution of calendars and it must be a source of gratification to many to note signs of a decline in the volume of this form of questionable advertising. Much fewer calendars were received at this office for review this year than for several seasons back, those received, however, showing a marked improvement on previous years. If a business concern favors the use of calendars they should get out something worth while and exercise great care in seeing that the distribution is thorough and covers only the field of possible customers. If a calendar is not strong enough to command a position of prominence sufficient to guarantee that it will bring the firm's goods before buyers for 365 days in the year, the expense should be saved.

Both manufacturers and retailers are using calendars more gingerly, the former taking up paper knives, desk decorations, and other forms of business reminders, while many retailers have adopted the pocket-knife souvenir as a more lasting and better business bringing advertisement. One Ontario retailer purchased about 100 two-bladed knives last year and by carefully distributing them has a permanent advertisement in the pockets of a hundred of his best customers. The knives cost about $6 per dozen, and his advertising matter was inserted under the handle on each side. The dealer referred to has found the knife souvenir a paying one and could not be induced to take up calendars again under any consideration.

Another dealer in Ontario got satisfaction out of calendars this year by advertising in the local paper that he would have a nice calendar for distribution, but only one would be given to each household. To secure a calendar a person had to come to the store before Dec. 1 and make a purchase of goods. All names were then written in a calendar book and about Dec. 15 another announcement was made in the local paper that the calendar was ready for distribution and all who had put their names down before Dec. 1 could get their calendar by calling for it at the store. By this plan the retailer succeeded in getting each customer into his store twice before the Christmas holidays. He also succeeded in compiling a first-class mailing list in addition to getting his calendar advertisement into the homes of those he desired as permanent customers. By adopting some such plan as this, expensive calendar advertising can be made to bring good results, but unless similar care is exercised it is far better for the retail dealer to confine his advertising to his local newspapers, changing it often and making a study of how to use the space paid for to the best advantage.

EDITORIAL NOTES.

During the past year excellent progress has been made in the erection of the great railroad and highway cantilever bridge across the St. Lawrence River, near Quebec. Although this structure is by no means the largest bridge in respect of its over-all length, it will contain the largest single span ever erected, the main span over the river measuring 1,800 feet between the towers. The total length from centre to centre of anchorage piers is 2,800 feet, made up of two 500-foot anchor spans, and two 562½-foot cantilever arms, extending over the river and carrying between them a central suspended span of 675 feet. The depth of the trusses over the main piers is 350 feet. The floor system will accommodate two steam railroad tracks, two electric car tracks, two highways for vehicles, and two sidewalks. The bridge is now more than one-half erected, and will be completed during the present year.

HARDWARE TRADE GOSSIP

Ontario.

D. C. Taylor, Lucknow, formerly a hardware merchant, has gone into the lumber business.

L. P. Foucar, hardware merchant, Tottenham, has installed a long distance telephone in his store.

J. D. Murdock and Co., hardware merchants, of Simcoe, Ont., have advertised their business for sale.

G. A. Binns, hardware merchant, of Newmarket, called on the hardware jobbers in Toronto this week.

C. Beirl, hardware merchant, of Markham, was a visitor in Toronto this week, among the hardware jobbers.

Wm. Knight, hardware merchant, of Maple, was in Toronto this week, calling on the wholesale hardware trade.

The hardware store of J. E. Mosley, Huntsville, was partly destroyed by fire last Saturday. Loss covered by insurance.

Geo. A. Beamish, foreman in the plumbing department of W. Doig, hardware merchant, of Russell, Man., has been a visitor in Toronto for the past week.

A. H. Gingerich, hardware merchant, of Woodstock, will move into the new store which he has leased, in about two weeks.

James Young has purchased the Stewart hardware business at Auburn, and will be given possession in a day or two.

John S. Moir, hardware merchant, Arnprior, is having his hardware store enlarged, intending to make it double its present size.

T. A. Kennedy, of the firm of Kennedy Bros., hardware merchants, Winnipeg, is spending a few days with his parents at Westport, Ont.

The F. Hamilton Company, hardware merchants, of Hamilton, have changed their name and will hereafter be known as the Alexander Hardware Co.

G. R. Duncan, of the Canadian Iron and Foundry Company, Fort William, returned last week from Montreal, where he spent the Christmas vacation.

Fred Baker, customs house representative for Rice Lewis & Son, Toronto, has been ill for the past week, and Jack Mills, of the sample floor, is taking his place.

Mr. Johnstone, of Johnstone Bros., hardware merchants, in the new town of Pefferlaw, on the C.N.R., was in Toronto this week placing sorting orders with hardware jobbers.

T. M. Hodgson, Toronto representative of the Dominion Wire Company, was elected to the council of East Toronto last week, heading the poll for ward 1, in which he ran.

Andrew Corbin, who for a long time was first vice-president of C. & F. Corbin, manufacturers, at New Britain, Conn., died at that place on Friday, January 4, in his seventy-fourth year.

Chesney & Smiley, Seaforth, have dissolved partnership as hardware merchants and their business will be continued by Chesney & Wilson. Mr. Smiley has purchased the stock and trade of W. H. Rumball, Aylmer, Ont.

J. T. Carlind, who has been pushing Lunkenheimer valves, etc., in Ontario for some weeks for Cluff Bros., Toronto, will have an exhibition at the convention of the Canadian Stationary Engineers' Association in Ottawa next week.

Geo. J. B. Ramsden, travelling sales manager of the J. H. Still Manufacturing Company, St. Thomas, has been appointed advertising manager, in addition to his other duties with that company.

Thomas Chamberlain, foreman of one of the departments of Buck Stove Works, Brantford, was presented with an address and a beautiful silver butter dish by the men of his department during the holiday week.

Thomas Thomson, aged 78 years, a highly esteemed resident of London, died Jan. 5 at the family residence. Deceased, who was born in Hudson, Que., went to London about fifty-three years ago and engaged in the hardware business.

Two new hardware stores are being started in Toronto. T. A. Whetstone, on College street, and Mr. Franklin, on Bathurst. In one case the order is being held over awaiting the arrival of shelf boxes, which are becoming a recognized part of a hardware's store equipment.

The management of the National Portland Cement Company, of Durham, entertained the employes and their friends, some 300 in number, to a banquet during the holiday week. The company produced 45,000 more barrels of cement than last year. President McWilliams was presented by the employes with a diamond ring, as a small token of respect.

Quebec.

P. Filion, St. Therese, was in Montreal last week.

Felix Cyr, St. Hermas Station, was in Montreal last week on business.

H. G. Eadie, iron and steel merchant, Montreal, is in New York on business.

A. Limoges, Beauharnois, was in Montreal last week buying general goods.

Andrew Forman, of John Forman & Co., electrical supplies, Montreal, is in New York on business.

J. A. Fraser, of Frothingham & Workman, Montreal, has joined the traveling staff of the same firm.

The assets of T. L. Clarke & Company, manufacturers of sleigh bells, Montreal, are advertised for sale.

J. S. McLernon, manager of John Round & Son, Montreal, has gone to the Old Country on a business trip.

Mr. Hudson, of the Russell & Erwin Manufacturing Co., New Britain, Conn., is in Montreal calling on his customers among the wholesalers.

Wm. Paul, Sorel, who is rebuilding the R. & O. steamer, Sovereign, which was destroyed last year by fire at Lachine, is in Montreal purchasing supplies.

A. J. Owen, Canadian representative of Franklin Saunders & Co., Montreal, who has been combining business with pleasure in the Old Country, sailed for home on Jan. 16.

J. B Campbell, of the Acme Can Co., Montreal, has returned to his desk, after a business trip through Western Canada. Mr. Campbell reports "everything lovely" in his line.

R. F. Warren, a young man who has been for the past 7 or 8 years in Frothingham & Workman's Montreal warehouse, has been promoted to the traveling staff and is now calling on the trade.

D. B. Knight, manager of the Frost & Wood Co., Montreal, is severing his connection with that firm, and last week was presented with a gold watch by the office and sales department of that firm.

W. G. How, Montreal representative of the Wilkinson Sword Co., London, England, has been called to the Old Country suddenly owing to the death of his mother. He is expected back about Feb. 15.

A. A. Bittues, manager of the Montreal branch of the Safety Razor Co., has returned from Boston, where he has been on business in connection with the recent fire which destroyed their Canadian factory.

Western Canada.

R. J. Mc Connell, formerly of St. Marys, Ont., but now a prominent hardware merchant of Carman, Man., has erected a fine new two-storey brick store, 30 feet by 80 feet, into which he recently moved. The store is fitted with all the latest improved conveniences.

The employes of the J. H. Ashdown Hardware Company, of Winnipeg, held a large banquet on New Year's eve. The affair was in honor of Messrs. Britton, Sinclair and Thompson, retiring members of the Ashdown staff. G. A. Britton, so long connected with the sporting department of the Ashdown Co., is going into business for himself. C. Sinclair, after a period of nine years' service, is taking a responsible position with the Winnipeg Paint and Glass Co., and F. Thompson has accepted a position with Crane & Ordway. After the menu was served, a presentation was made by W. J. Thorneloe, to each of the retiring members. To Mr. Britton a handsome meerschaum pipe, silver mounted, to Mr. Sinclair, a pair of solid gold cuff links, beautifully engraved, and to Mr. Thompson a gold mounted fountain pen.

Markets and Market Notes

(For detailed prices see Current Market Quotations, page 62.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Copper Range Boilers—New list shows advances.
Wire Nails—Advanced ten cents per keg.
Building Paper—Advance expected daily.
Old Material—Advanced.

TORONTO.

Copper Range Boilers—New list.
Galvanized Range Boilers—Up 25 cents.
Cast Iron Fittings—Advanced.
Iron Pipe—Changes in large sizes.
J.M.T. Valves—Advanced 5 per cent.
Brass—Higher prices quoted.
Old Materials—Many changes upward.
Stanley Goods—Advanced.
Nails—Advanced 5 cents base price.
Starrett's Tools—Advanced.

Montreal Hardware Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, Jan. 18, 1907.

Jobbers report that all travelers are now out and orders are coming in freely.

The market remains very firm, with only one advance—wire nails, which have jumped up 10 cents per keg.

Some sizes of screws are beginning to get scarce.

The new building paper prices mentioned last week have not yet come to light, but are expected any moment now.

AXES.—We quote: $7.60 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen. follows: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34-inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS. — Our prices are: "Prism" globes, $1.20; Cold blast, $6.50; No. 0, Safety, $4.00.

COW TIES AND STALL FIXTURES —We still quote; Cow ties, discount 40 per cent. off list; stall fixtures, discount 35 per cent. off list.

SLEIGH BELLS—Our prices still remain as follows: Back straps, 30c. to $2.50; body straps, 70c to $3.50; York Eye bells, common, 70c. to $1.50; pear shape, $1.15 to $2; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

RIVETS & BURRS—We still quote: Best iron rivets, section carriage, and wagon box black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 25 per cent. off, and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 15 per cent., subject to usual charge for half-pound boxes.

HAY WIRE. Prices remain firm. Our quotations are: No. 13, $2.55; No. 14, $2.65; No. 15, $2.80; f.o.b. Montreal.

MACHINE SCREWS—Some sizes are getting scarce. We quote: Flat head, iron, 35 per cent., flat head brass, 35 per cent., Felisterhead, iron, 30 per cent.. Felisterhead, brass, 25 per cent.

BOLTS AND NUTS — Discounts remain,: Carriage bolts, 3 and under, 60 and 10; 7-16 and larger, 55 p.c.; fancy carriage bolts, 50 p.c.; sleigh shoe bolts, ⅝ and under, 60 per cent.; 7-16 and over, 50 per cent.; machine bolts, ⅝ and under, 60 per cent.; 7-16 and larger, 55 per cent.

HORSE NAILS—New lists have been issued showing several changes, but discounts continue as follows: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.

WIRE NAILS—Advance 10 cents per keg. We quote: $2.40 per keg base f.o.b. Montreal.

CUT NAILS—We continue to quote: $2.50 per 100 lbs.; M.R.M. Co., latest, $2.30 per keg base, f.o.b. Montreal.

HORSESHOES. — Our prices are: P.B. new pattern, base price, improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 lbs. More than three sizes, 25c. per 100 lbs extra.

BUILDING PAPER—New lists have not yet arrived, but are expected daily.

CEMENT AND FIREBRICK.—No change in prices. We are still quoting: "Lehigh" Portland in wood, $2.54, in cotton sacks, $2.39; in paper sacks, $2.31. Lefarge (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American $30 to $35; White Bros.' English cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—Our quotations remain: 5-16 inch, $4.40; 3-8 inch, $3.90; 7-16 inch, $3.70; 1-2 inch, $3.50; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.20; 7-8 inch, $3.10; 1 inch, $3.10.

SHOT—Our prices remain as follows: Shot packed in 25-lb. bags, ordinary drop AAA to dust, $7 per 100 lbs.; chilled, No. 1—10, $7.50 per 100 lbs.; brick and seal, $8 per 100 lbs.; ball, $8.50 per 100 lbs. Net list. Bags less than 25 lbs., ½c. per lb. extra, net; f.o.b. Montreal, Toronto, Hamilton, London, St. John, Halifax.

AMMUNITION — Our prices are: Loaded with black powder, 12 and 16 gauge, per 1,000, $15; 10 gauge, per 1,000, $18; loaded with smokeless powder, 12 and 16 gauge, per 1,000, $20.50; 10 gauge, $23.50.

GREEN WIRE CLOTH.—We continue to quote: In 100 foot rolls, $1.62½ per hundred square feet, in 50 feet rolls, $1.67½ per hundred square feet.

Toronto Hardware Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Jan. 18, 1907.

Wholesale hardware merchants report business again very brisk, with prospects of even a brighter year than 1906. In some houses orders are coming in so rapidly that the shipping staff have been working overtime. As predicted by us some time ago, Stanley goods have advanced. A new schedule of prices covering a greater part of their product has been issued by the Stanley Company. Advances are shown in numerous styles of rules, squares, levels and planes, but the feature of the schedule is that it quotes net prices, and discounts have been virtually done away with by the company. Starrett's goods are also quoted at an advance.

NAILS—Have again advanced 5c. per cwt., and are now quoted at $2.35 base price. The great demand still exists for nails, not allowing the manufacturers to catch up with their orders.

AXES AND HANDLES—A great number of new makes of axe handles are on the market, and large orders are being booked for Fall shipment.

GARDEN TOOLS—These various lines are meeting with a good demand. Merchants still continue placing orders.

WASHING MACHINES, ETC. Are meeting with great demand. As soon as stock-taking is finished merchants will order these goods sent forward. Such a number has been ordered this year that it will be far in excess of anything previous.

SPORTING GOODS — Have again started moving rapidly. The increased cold weather with snow has largely increased the sale of snowshoes and skates. Ammunition is selling well for trap shooting.

CHAIN—Remains at our former quotations: ¼ in., $3.50; 9-16 in., $3.55; ⅜ in., $3.60; 7-16 in., $3.85; 3-8 in., $4.10; 5-16 in. $4.70; 1-4 in. $5.10.

RIVETS AND BURRS—Are firm at the advanced price at 25 per cent for copper, and 60, 10 and 10 for iron and tinned.

SCREWS—The Canada Screw Co contradict the statement that screws are on an advance. Another well-informed dealer says that the scare is all over, and screws will remain the same as formerly.

BOLTS AND NUTS—Scarcity is very apparent with a large demand coming from all parts.

TOOLS—Stanley goods have all advanced and are now away ahead of all former quotations. Starrett's tools have also experienced a slight advance.

SHOVELS—Snow-shovels are again in great demand and very few will be carried over the season.

LANTERNS—The lantern demand is very quiet at present, all merchants apparently having large stocks on hand.

EXTENSION AND STEP LADDERS—Price remains the same as quoted last week, 11 cents per foot for 3 to 6 feet, and 12 cents per foot for 7 to 10-foot ladders. Waggoner extension ladders 40 per cent.

POULTRY NETTING—We quote: 2-inch mesh, 19 w.g., discount 50 and 10 per cent. All others 50 per cent.

WIRE FENCING—No change in the advanced prices of galvanized and plain wire, and continue selling well.

OILED AND ANNEALED WIRE—(Canadian)—Gauge 10, $2.41; gauge 11, $2.47; gauge 12, $2.55, per 100 lbs.

WIRE NAILS—Another advance of 5 cents on base price of nails has been made and we now quote at $2.35 base.

CUT NAILS—We quote $2.30 base f.o.b. Montreal; Toronto, 20c. higher.

HORSENAILS—"C" brand, 40, 10 and 7½ off list. "H.R.M." brand, 60 per cent. off.

HORSESHOES—Our quotations continue as follows: P.B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toeweight, all sizes 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per 100 lbs. extra; more than three sizes in a keg, 25c. per 100 lbs. extra.

BUILDING PAPER—Orders are still coming in briskly, the advanced price not affecting the ordering to any extent.

CEMENT—We quote: For carload orders, f.o.b. Toronto, Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Portland, $2.05 upwards.

FIREBRICK—English and Scotch fire brick $27 to $30; American low-grade, $23 to $25; high-grade, $27.50 to $35.

HIDES, WOOL, FURS—The market is steady with a slight decline in country hides to allow for lack of quality.

Hides, inspected, cows and steers, No. 1		0 11½

Montreal Metal Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, January 18, 1907

No startling changes have taken place during the week. Ingot tin is a little easier, having dropped a cent a pound.

Copper remains unchanged and very firm, with no large stocks reported.

Spelter remains unchanged, but is expected to go higher.

Lead and antimony are still firm.

New prices showing an advance in sheet metals are expected next week.

Old material shows several advances.

COPPER—Remains very firm, with the expected advance still a thing of the future. Our prices remain: Ingot copper, 26c to 26½c; sheet copper, base sizes, 34c.

INGOT TIN—Shows a decline of one cent per pound. New prices now are 45½ to 46c per pound.

ZINC SPELTER—Expected to go higher. We still quote: $7.50 to $7.75 per 100 pounds.

PIG LEAD. — No change over last week's prices. We still quote: $5.50 to $5.60 per 100 pounds.

ANTIMONY—Our price remains 27¼ to 28 cents per pound.

PIG IRON.—Remains the same. Our prices are: Londonderry, $24.50; Carron, No. 1, $24.50; Carron, special, $23.50; Summerlee, No. 2, selected, $25.00; Summerlee, No. 3, soft, $23.50.

BOILER TUBES—Very firm. We quote: 1½ to 2 in., $9.50; 2¼ in., $10.35; 2½ in., $11.50; 3 in., $13.00; 3½ in., $17.00; 4 in. $21.50; 5 in., $45.00.

TOOL STEEL — Our prices remain: Colonial Black Diamond, 8c to 9c; Sanderson's 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Hardening," 65c. per pound; Conqueror, 7½c.; Conqueror high speed steel, 60c.; Jowitt's Diamond J., 6¼c. to 7c.; Jowitt's best, 11c. to 11½c.

MERCHANT STEEL.—Our prices are as follows: Sleigh shoe, $2.25; tire, $2.40, spring, $2.75; toecalk, $3.05; machinery iron finish, $2.40; reeled machinery steel, $2.75; mild, $2.25 base and upwards; square harrow teeth $2.40; band steel, $2.45 base. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING—Present prices are: 3-16 inch to ¼ inch, $7.25; 5-16 inch to 11-32 inch, $6.20; ⅜ inch to 17-32 inch, $5.15; 9-16 inch to 47-64 inch, $4.45; ¾ inch to 17-16 inch, $4.10; 1½ inch to 3 inch, $3.75; 3⅛ to 3 7-16 inch, $3.92; 3½ inch to 3 15-16 inch, $4.10; 4 inch to 4 7-16 inch, $4.45; 4½ inch to 4 15-16 inch, $4.80. This is equivalent to 30 per cent. off list.

GALVANIZED IRON — We are still quoting Queen's Head, 28 gauge, $4.60 to $4.85; 26 gauge, $4.45; 22 to 24 gauge, $3.90; 16 to 20 gauge, $3.75; Apollo, 28 gauge, $4.45 to $4.70; 26 gauge, $4.30; 22 and 24 gauge, $3.75; 16 and 20 gauge, $3.60; Comet, 28 gauge, $4.45 to $4.70; 26 gauge, $4.30 to $4.45; 22 and 24, gauge, $3.75 to $4.00; $16 to 20 gauge, $3.60 to $3.85; Fleur-de-Lis, 28 gauge, $4.45 to $4.70; 26 gauge, $4.30; 22 and 24 gauge, $3.75; 16 to 20 gauge, $3.60; Gorbals "Best Best," 28 gauge, $4.45; Colborne Crown, 28 gauge, $4.45; 26 gauge, $4.30; 24 gauge, $3.75. In less than case lots, 25c extra.

OLD MATERIAL—We quote: Heavy copper, 19c per lb.; light copper, 16c per lb.; heavy red brass, 17 cents per lb.; heavy yellow brass, 14c per lb.; light brass, 10 to 10½c per lb.; tea lead, 4c per lb.; heavy lead, 4½c per lb.; scrap zinc, 4c per lb.; No. 1 wrought, $16.00 to $17.00 per ton; No. 2 wrought $6.00 per ton; No. 1 machinery, $18.00 per 100 lbs.; stove plate, $13.00 per ton; old rubber, 10 cents per lb.; mixed rags, 1 to 1¼c per lb.

Toronto Metal Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Jan. 18, 1907

Things are comparatively quiet in metals with only a seasonable trade being done and not many changes to report. Brass has advanced from 27½ cents to 30 cents, and this is the only change, with the exception of old material, in which we quote advances on old copper, brass, lead, iron and rubbers.

There is little to say regarding pig iron. Prices hold very firm, but no changes have been made for the past month. Iron is still hard to get and prospects of relief are anything but bright. Bars hold the recent advance very well. Tin is stronger than it was a week ago and our price remains the same.

Stocks of copper are very low and material is exceedingly hard to get. The electrical manufacturers seem to be absorbing a large percentage of the production and there is talk amongst American buyers of prices soaring higher than ever during 1907. Lead and spelter remain as before—firm, with a fair business being done.

It is announced that the tin plate works at Morrisburg are to be opened

Jan. 21, with a large public demonstration. We will report this matter more fully in another issue.

PIG IRON — Business is quiet, but prices hold very stiff. Hamilton, Midland and Londonderry are off the market, and Radnor is quoted at $33 at furnace. Middlesborough is quoted at $24.50, and Summerlee, at $26 f.o.b., Toronto.

BAR IRON—Stocks are easier with prices firm at $2.30 f.o.b. Toronto, with 2 per cent. discount.

INGOT TIN—The market has strengthened and our quotations of 45 to 46 cents a pound are close.

TIN PLATES—Business is active and prices firm with booked orders for Spring and Summer delivery large.

SHEETS AND PLATES—Active buying is reported with prices steady. Stocks are light.

BRASS—A sharp advance of 2½ cents per pound has been made and for sheets we now quote 30 cents per pound.

COPPER—Stocks are very low owing to heavy buying by electrical manufacturers. Prices are very stiff. We now quote: Ingot copper $26 per 100 lbs., and sheet copper $31 to $32 per 100 lbs.

LEAD—Business is fairly active and prices firm. We quote: $5.40 for imported pig and $5.75 to $6.00 for bar lead.

ZINC SPELTER—Stocks continue light with market firm and active. We quote 7½c. per lb. for foreign and 7c. per lb. for domestic. Sheet zinc is quoted at 8 1-4c. in casks, and 8 1-2c. in part casks.

BOILER PLATES AND TUBES—We quote: Plates, per 100 lbs., ¼ in. to ½ in., $2.50; ⅝ in., $2.35 heads, per 100 lbs., $2.75; tank plates, 3-16 in., $2.65; tubes, per 100 feet, 1¼ in., $8.50; 2, $9; 2 1-2, $11.30; 3, $12.50; 3 1-2, $16; 4, $20.00. Terms, 2 per cent. off.

ANTIMONY—Market is active, and stocks scarce. Prices firm at 27c. to 28c.

OLD MATERIAL.—Dealers' buying prices still continue as follows: Heavy copper and wire, 20 cents per lb.; light copper, 17½c. per lb.; heavy red brass, 15c. per lb.; heavy yellow brass, 17½c. per lb.; light brass, 11c. per lb.; tea lead, $3.75 per 100 lbs.; heavy lead, $4.25 per 100 lbs.; scrap zinc, 4½c. per lb.; No. 1 wrought iron, $15; No. 2 wrought, $8; machinery cast scrap, $17 to $18; stove plate, $14; malleable and steel, $9; old rubbers, 10c. per pound; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—The usual difficulties in transportation are being experienced. Slack is still scarce. We quote:

Standard Hocking soft coal f.o.b. at mines, lump $1.75, ¾ inch, $1.65, run of mine, $1.40, nut, $1.25; N. & S. $1.10; P. & S., 85c.

Youghiogheny soft coal in cars, bonded at bridges; lump, $2.90; ¾ inch, $2.70; mine run, $2.60; slack, $2.25.

United States Metal Markets

From the Iron Age, Jan. 17 1907.

The buying movement in pig iron for forward delivery which set in in the Central West since the opening of the year, has made further progress. It is estimated that during the past week there have been sales aggregating 100,000 tons in the Chicago District, including one block of 25,000 tons of malleable iron to one foundry, and 10,000 tons of foundry iron to one machinery manufacturer. Other markets, like Cincinnati and Cleveland, are feeling the movement, the furnaces in the latter district having advanced the price to $22.

Favorable indications are coming from the Birmingham district with regard to the car situation there. It is estimated that there are piled up at the furnaces in the district between 60,000 to 70,000 tons of pig iron, sold and long due to be delivered, which it has been impossible to move.

Pipe makers report heavy inquiries for cast iron pipe, among them being one lot of 12,000 tons for Chicago. The coming letting of 38,000 tons of pipe for New Orleans next week, will have more than local significance. The contract is to be let in six sections, but the bulk of the pipe is for next year's delivery. In view of the relatively high prices it is considered rather doubtful whether the whole of the work will be given out. It will be significant if it is not.

Pittsburg reports that the supply of steel is becoming better, so far as the open market is concerned. On the other hand, tidewater steel works have been able lately to place in the territory west of the Alleghenies some good lots at high prices.

While some large additional steel rail tonnage is pending the largest single order placed was 7,000 tons for the San Antonio & Aransas Pass. It is estimated that all the mills in the country have on their books orders aggregating 2,500,000 tons in addition to about 250,000 tons carried over from last year.

In structural material one order calling for 15,000 tons has been practically closed. Otherwise only fair sized work has come out. One of the eastern mills has advanced its price for shapes to $1.85, at mill, against the usual quotations of $1.85, at tidewater.

From the Iron Trade Review, Jan. 17, 1907

One of the most interesting features in the whole iron and steel business during the week came out when the steel car interests began to make inquiries for plates extending into 1908, and it is announced that inquiries in the neighborhood of 40,000 cars are now in the market, showing that the railroad companies have confidence in the future for practically a year and a half at least, as deliveries on this number of cars could not be made before July, 1908, when the work on hand in this line is taken into consideration.

The demand for sheets continues strong. The principal producer is now behind on deliveries from 14 to 16 weeks. Inability to secure an adequate supply of sheet bars has prevented mills from running to their full capacity. The tremendous demand for plates continues, and mills are overwhelmed with specifications, while mills are having difficulty in obtaining supplies of semi-finished materials.

Owing to the mild weather and offerings of the railroads, old material prices are sagging in nearly all centres. Coke conditions are also somewhat easier, as much better delivery is being given by the railroads.

A decided improvement in the demand for structural material is noted, especially in the Chicago district, where the Illinois Steel Co. has received specifications for about 60,000 tons, of which some 50,000 tons came from a western car builder, and included both plates and shapes. Numerous orders for bridge material aggregating a considerable tonnage, have been placed, and many inquiries for steel for new buildings in New York, Chicago and other cities are pending.

London, Eng., Metal Markets

From Metal Market Report, Jan 1st, 1907.

Cleveland warrants are quoted at 60s. 7½d., and Glasgow standard warrants at 59s. 10d., making price as compared with last week, 4½d. higher on Cleveland warrants, and 3s. 4d. higher on Glasgow standard warrants.

TIN—Spot tin opened steady at £189, futures at £190 5s., and after sales of 360 tons of spot and 180 tons of futures closed easy at £188 15s. for spot, £189 15s. for futures, making price compared with last week 10s. higher on spot and unchanged on futures.

COPPER—Spot copper opened easy at £108 5s., futures, £109, and after sales of 500 tons of spot and 450 tons of futures, closed steady at £108 10s. for spot, and £108 17s. 6d. for futures, making price compared with last week £2 7s. 6d. higher on spot and £1 15s. higher on futures.

LEAD—The market closed at £19 17s. 6d., making price as compared with last week, 2s. 6d. higher.

SPELTER—The market closed at £27 12s. 6d., making price as compared with last week, 2s. 6d. lower.

B.C. Hardware Trade News

Vancouver, Jan. 12, 1907.

It is positively announced that the Chicago & Northwestern Railway, which has now a line under construction from St. Paul to Seattle, will seek entry into Canada at Vancouver, to partake of the coast trade here. Representatives of the road have visited the city from time to time in the past few months with the intent to seek suitable location for terminal facilities, though so far as known no purchases have been made yet.

With the advent of this road, when it ultimately reaches the coast, and the rumored intention of the Canadian Northern also to seek entry to the coast at Vancouver, this city will have earned its title to the name "Terminal City" which it is now usually dubbed. The C.P.R. and the Great Northern are both here, the G.T.P. is coming, and the C.N.R. and the Chicago & Northwestern will make five trunk lines which will some day run into Vancouver.

Before R. G. Macpherson, M.P. left for Ottawa, returning from spending

Christmas at home, he was consulted by the Vancouver Board of Trade on various matters of importance in which this city is interested. Perhaps the most important was the attitude of the Government as to assisting the project of a large terminal elevator built here to encourage the shipment of Alberta grown wheat via this coast. At present a freight rate which is against the western shipping of wheat is in force. But it has been intimated that the C.P.R. would meet the rate question amicably if the Government would provide terminal facilities for storage and shipment of grain similar to that already provided at Montreal. Mr. Macpherson promised to look into the matter fully, and if advisable to have such facilities instead of elevators built and operated by private enterprise he would support the project, in order to see that the shipping of wheat this way was fostered.

It was pointed out at the conference, that the C.P.R. now complained of having to bring empty cars west to accommodate the lumber trade, as there was not traffic enough to the coast to bring out loaded cars in sufficient numbers to supply the coast mills with all the cars they needed for the lumber trade. If the wheat came west the car shortage would be in large measure remedied.

* * *

Another important matter brought to Mr. Macpherson's notice was the Board request sent to the Government for the rescinding of the order in council suspending the coasting laws as far as this coast was concerned. R. P. McLennan, chairman of the meeting, explained that when the suspension of the coasting laws had been asked for it was to give the merchants a chance to ship goods, especially north. Now that the local steamer service had been very greatly improved, it was unnecessary to continue the suspension, and in fact it would be a benefit to the lines now well-established locally, as it would assist them in building up still further. It would also compel other railway companies to improve their terminal facilities if the order were rescinded and the coasting laws enforced.

* * *

Large wharves are to be built at once at Prince Rupert, the Kaien Island terminus of the Grand Trunk Pacific. A large pile-driver was sent north recently and as soon as it reached the new terminus that is to be, it would be put in commission driving piles for the wharves. Recently a small pipe line was installed, the beginning of the water system which will supply the new city. This supply is but temporary to ensure good water for the few cottages and places of business now erected or being erected on the town site. The United Supply & Contracting Co., which has offices in Vancouver, is in charge of much of the improvement going forward at Prince Rupert.

Mining matters in the boundary district have progressed very satisfactorily during 1906. The total shipments of ore for the year as far as reported, were 1,162,034 tons. The three boundary district smelters, the Granby at Grand Forks, the B.C. Copper Co. at Boundary Falls, the Dominion Copper Co., at Greenwood, treated during the year 1,180,546 tons.

In Rossland camp, much good work has been accomplished and the output especially of the old mines, Le Roi and Centre Star, greatly increased. The old Northport smelter is now in commission again and as soon as the balance of 30,000 tons still to be sent to Trail has been shipped from the Le Roi mine the rest of the output will go to Northport. Two furnaces have already been blown in at Northport and two more will be blown in as soon as the management is sure of the coke supply.

Regarding the coke situation, Manager G. G. S. Lindsey of the Crow's Nest Pass Coal Co., who is in Victoria on business, says that the strike at Fernie is all settled and the mine has resumed its normal activity. The output of coke is again up to the usual amount and no farther trouble is anticipated.

* * *

Many of the coast lumber mills are partially shut down for the annual clean-up and refitting of machinery. Lumber orders are, however, coming in from the Northwest without abatement and the greatest activity is noticeable in the market. Prices have not advanced yet since the beginning of the year, but another increase is quite within the bounds of possibility. Since the holiday season has closed the loggers, minus the proceeds of their December pay-checks, have gone back up coast to the camps, and though snow is heavy in some places, still it is considered that a good deal of timber will now be got out. Recently there were nine tugs, all with large tows of logs, congregated at one time in Secret Cove, a shelter harbor some distance up the coast.

* * *

The possibilities of development of Vancouver's great harbor have been thrown on the screen with startling vividness by the published announcement of the plans of the V.W. & Y. R'y., the coast branch of the Great Northern Railway in this province. Ordinarily the casual observer looks upon Vancouver's harbor as that little fringe of water-front on the south side of Burrard Inlet, facing the city proper, and along which the C.P.R. wharves cover most of the space. But the oft-mooted question of a bridge across what is known as the "Second Narrows," about a mile and a half from the C.P.R. wharves, and a spur line run along the north shore of the inlet for nearly five miles, is now being definitely brought down to a project for immediate execution. This would mean the "arrival," as the French would say, of the greatest harbor in Canada, the whole of Burrard Inlet, with its land-locked security and its great depth of anchorage wide enough also for the merchant fleets of the whole Pacific to swing in, being available for such enterprises as would require dockage and water-front facilities combined with rail connection on land.

The bridge across the Narrows has been looked on as the first step northward, of the V.W. & Y., which holds a charter extending some hundreds of miles north from Vancouver. But the announced intention of the railway to place industrial sites on the north shore of the inlet in the advantageous position of having rail connection, has made the project assume a distinctly new and immediate interest. It is expected that work will begin during the present year on the proposed bridge, which will be a high level structure to permit of shipping passing under it.

* * *

While coal mining on Vancouver Island has long been one of the chief industries, famed far and wide as a grand steaming coal, has been sold in immense quantities in San Francisco and to the many steamers trading to this coast, the operation of mines has been always confined to a limited area. The three chief mines are the Nanaimo, Extension, close to Nanaimo, and Comox, some distance further north on the east coast of the island. Quite recently parties with large capital have become interested in a coal measure of promise at Nanoose Bay, close to Nanaimo also. Now it is reported that some six thousand acres of coal lands at Sooke Bay, close to Victoria, have been leased and work with diamond drill is to commence at once to determine the value of the coal seams under the property, and if results are as expected, there will be another big coal producing mine on the island.

* * *

Wood pulp made in B.C. will be on the market next year, says managing director J. M. Mackinnon, of the Canadian Pacific Sulphite Pulp Co., whose operations at Swanson Bay on the northern coast have been assuming definite shape and increasing activity for some months. Over 83,000 acres of land are owned by the company, which is capitalized at £100,000, most of which is English money. Some leading British pulp men are directly interested. Among them is Mr. John Mackie, managing director of Davidson & Son, of Aberdeen, one of the largest pulp-importing concerns in the old country. Geo. F. Hardy of New York, the best known expert in designing pulp plants, is consulting engineer. It is intended to develop water-power from Swanson river, which is capable of giving from 11,000 to 30,000 horse-power. Many car-loads of machinery for the plant are now in Vancouver, and en route from the manufacturers.

U. S. STEEL PLANT.

The Financial Post, Toronto, refers to the proposal to establish a plant of the United States Steel Corporation at Sandwich as follows: "Daily press despatches from Sandwich say that work will be begun during the early summer by the United States Steel Corporation upon a mammoth steel plant employing 5,000 men. The property is under option and is 1,000 acres in extent, chiefly belonging to the Scotten estate of which Dr. R. Adlinton Newman is the administrator. This statement is at all events premature. The property in question is under option to parties who may or may not represent the U.S. Steel Corporation or any other company. The option has not been exercised as yet. If this somewhat prophetic and prospective announcement were correct, it would be a matter of considerable interest and moment. As a matter of fact the United States Steel Corporation has been intending to locate in Canada. Another point, Port Colborne, has been mentioned."

AGENTS WANTED.

A United States firm manufacturing a safety clevis are anxious to secure Canadian agents. This clevis has had a large sale in the United States among the hardware trade and it should be a good line for some manufacturer's agent in Canada to take up. Address enquiries to. "Manager," Hardware and Metal, Toronto.

COPPER vs. COAL.

The constantly growing demand for electric power is absorbing every pound of available copper, as substitutes for the metal are being used in practically every other line, says a keen observer of U.S. copper markets.

Sheet copper workers and cornice makers declare that they are using only half the copper they would were the price down to 15 cents. Galvanized iron is taking the place of copper in the building trades; and the consumption of brass has suffered decidedly in some directions. This is how the advance in of copper to supply the tremendous price has made available a larger amount growth of demand from electrical manufacturers, wire mills, etc.

Copper is coming to be a direct competitor of coal. The world is using mechanical power in a constantly increasing ratio. Every advance in the wages of the coal miners, every increase in the cost of mining supplies and in other mining expenses increases the price of coal and, therefore, advances the cost of creating power.

On the other hand, there have been most decided advances in the science of electrical generation and transmission, and in many places electricity, generated by waterpower, is entering into competition with the isolated steampower plant. While opportunities exist for the creation of electricity by waterpower copper at $1 per pound is cheaper than coal at $7 per ton. Now that electrical power can be transmitted 500 miles or more without any appreciable loss, waterpower privileges are advancing in price; and the question as to whether it is cheaper to generate electricity at the coal mines and transmit it across country by wire, or to ship the coal to local steam plants, as is done now, is being considered by power economists.

The work of equipping steam railroads with electricity is going ahead much more rapidly than most people realize, and the prospect now is that it will continue as rapidly as is consistent with a reasonable price for copper.

IMPORTING PIG IRON.

The Glasgow Scotsman of recent date says:

"In the course of the last few weeks the American demand for Scottish pig iron has reached dimensions which have not been experienced for years, and which probably not a single member of the trade ever expected to see realized. Years ago the United States were liberal buyers of Scottish brands, and they have always taken more or less, latterly very much less; but owing to their own enormous production the market has long ceased to be one on which producers in Scotland could reckon. Suddenly, however, a change has come over the situation; apparent indifference has given place to activity, manifested in a rush of orders from all the consuming centres in the Eastern States, and covering present and prospective wants which sellers on this side find great difficulty in meeting. In fact, they are unable to do so completely.

"It is calculated that since the beginning of the month (November 1 to 19) firms in Boston, Philadelphia, Baltimore, and New York have contracted with Glasgow houses for the shipment of between 30,000 and 40,000 tons, mostly for foundry qualities, but also of hematite. Last week quite 10,000 tons were put through, and orders for many thousands of tons have been declined by makers because of their inability to give delivery. Prompt dispatch is desired in all cases, and as room in the regular steamship lines has been almost wholly taken up, it has been found necessary to charter special steamers, a thing that has not happened in the memory of the present generation of shippers. Besides what has been arranged for on Northern States' account, a cargo of over 1,000 tons has been sold for New Orleans, the first of the kind since 1879.

"If the American demand for Scottish iron is maintained into 1907 (and there are strong inquiries to point that way) a condition of things may be created which will prove most embarrassing for home consumers. There are no stocks, public or private, of consequence to fall back upon, and which always were a stand-by in the past. A year ago there were about 92,000 tons in reserve, and at the opening of 1900 there were 277,000 tons."

CIGARS AS ADVERTISEMENT.

J. W. Harris & Co., contractors, Montreal, have adopted an unique form of advertising. They have been sending around to the trade, cigars containing their own band, marked "J. W. H. & Co."

As these cigars are good quality, it is needless to say that J. W. Harris & Co. are extremely popular just at present.

COPPER FAMINE.

A copper famine is impending owing to the enormous demand for the metal at home and abroad. The demand is due to the great growth of electrical work all over the world. Manufacturers of electrical machinery say that the demand for their products is unprecedented. Authorities in the copper trade say it is doubtful if the output of copper this year will show a material increase over that of 1905. The scarcity of skilled miners has handicapped the larger producers and consequently has reduced production. It is also likely that the Chilian production will be materially reduced by the recent earthquake.

ROGERS BELT PUNCH.

E. C. Atkins & Co., saw manufacturers, Indianapolis, have just closed a deal whereby they secure the entire right to make and sell the Rogers Belt Punch. This little device—for punching holes in belts, straps, etc., is too well known to require an introduction. It is light, convenient, and does its work to perfection. The blade, of sharpened steel, slips into the handle when not in use, so that it is entirely protected. To operate, it is only necessary to pull out a thumb spring which fits into notches in the handle.

The blade is graduated and slightly concave, so that the size of the hole to be cut may be regulated by the amount of blade exposed. By slight pressure, the blade is forced through the belt or strap and by turning the handle around once, an even hole of uniform size is cut. It sells for fifty cents and should and will be in the pocket of every one having to cut uniform holes in belting, straps, and leather. Many of the best jobbers carry them, or it can be bought through E. C. Atkins & Co., 77 Adelaide Street east, Toronto.

BRADSTREET'S FAILURE RECORD

Bradstreet's record of failures in Canada for 27 years past is as follows:

	Number.	Assets.	Liabilities.
1906	1,232	$1,258,310	$9,540,915
1905	1,121	6,556,331	13,837,176
1904	1,177	4,136,618	10,018,299
1903	956	3,832,197	8,328,362
1902	1,092	3,597,220	8,328,658
1901	1,370	5,196,951	11,656,937
1900	1,333	4,244,932	10,786,276
1899	1,285	4,507,608	11,077,891
1898	1,427	4,085,722	9,644,100
1897	1,907	5,191,647	13,147,929
1896	2,179	6,724,535	16,208,160
1895	1,923	6,299,177	15,793,559
1894	1,873	11,947,253	23,985,283
1893	1,781	7,388,692	15,690,404
1892	1,682	4,848,095	11,603,210
1891	1,846	6,014,000	14,884,000
1889	1,616	6,119,585	13,147,910
1888	1,730	7,178,744	15,498,242
1887	1,315	8,407,000	17,054,000
1886	1,186	5,566,471	11,240,025
1885	1,286	4,201,831	9,210,334
1884	1,363	9,074,000	17,126,000
1883	1,464	12,367,000	22,155,000
1882	755	3,948,000	8,139,000
1881	607	3,278,475	6,122,208
1880	839	4,700,372	9,340,929

The above statistics go far to confirm the advices of large trade and good profits in Canada in the past year. There were 1,232 failures in the Dominion in 1906, a decrease of 13.4 per cent. from 1905, while the liabilities were $9,540,915, a decrease of 31 per cent. from the preceding year.

NEW GILLETTE FACTORY.

A. A. Bittues, manager of the Montreal factory of the Gillette Safety Razor Co., has returned from a trip to the head office in Boston, where he has been reporting conditions in connection with the fire which recently put their Canadian branch out of business. Mr. Bittues explains that the board have seen fit to allow him to find another factory in which to continue this end of the business within the shortest possible time.

The firm is at present trying to make arrangements with the Ottawa Government to allow them to bring in razors in such condition that they can be completed by some Canadian firm, as the bulk of the machinery used in their factory was built by themselves it can't be bought in the open market and takes 4 or 5 months to make. However, Mr. Bittues reports that there will be no unnecessary delay in getting things going again.

The firm, although in Montreal, has been treated extremely well by the hardware trade in general, having had many kind offers of assistance.

There is Twenty Years of Experience in this Can

Doesn't this point the way for you? Stephen's Pure Paint has now a proven record of over twenty years' hard use, under many difficult conditions.

Every gallon is made with Manitoba Linseed Oil—properly aged—this increases not only the body, but also the wearing qualities of the paint.

WINNIPEG, - CANADA

MANITOBA HARDWARE AND METAL MARKETS

(Market quotations corrected by telegraph up to 12 a.m. Friday, Jan. 11, 1907.)

Room 511, Union Bank Building, Office of HARDWARE AND METAL, Winnipeg, Man.

The past week has been a comparatively quiet one in the hardware and metal trades, but all wholesalers predict that the next few weeks will see a decided improvement and they expect the coming Spring to show a better volume of trade than any previous period. The congested condition of the roads owing to the recent unprecedented heavy snow storms has doubtless had the effect of limiting business, but orders are coming in fairly well notwithstanting, though shipping will not commence to any extent for another month.

Prices in some lines have advanced, notably copper rivets, wrought butts, wire nails, barb wire and shovels. Lead also shows an advance, and prices in the paint and oil departments hold firm, with linseed oil 3 cents higher.

LANTERNS. — Quotations are as follows: Cold blast, per dozen, $6.50; coppered cold blast, per dozen, $8.50; cold blast dash, per dozen, $8.50.

WIRE—We quote as follows: Barbed wire, 100 lbs., $2.90; plain galvanized, 6 to 8, $3.39; 10, $3.50; 12, $3.10; 13 $3.20; 14, $3.90; 15, $4.45; 16, $4.60; plain twist, $3.45; staples, $3.25; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS — Lists and discounts are quoted as follows: No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per pound. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Quoted now at $2.80 per keg.

CUT NAILS.—As noted last week cut nails have been advanced to $2.90 per keg.

PRESSED SPIKES — Prices are quoted as follows since the recent advance: ¼ x 5 and 6, $4.75; 5-6 x 5, 6 and 7, $4.40; ⅜ x 6, 7 and 8, $4.25; 7-16 x 7 and 9, $4.15; ½ x 8, 9, 10 and 12, $4.05; ⅝ x 10 and 12, $3.90. All other lengths 25c. extra net.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows: Bolts, carriage, ⅜ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅜ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½; hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

SUPERB EMPIRE
The Perfect Cooker

We draw the attention of the Western Trade to the Superb Empire Planished Steel Range. The oven door is not only braced but also spring balanced. A lever is attached to the front key-plate to raise it as desired, and contrived also to hold it up if necessary. The Superb throughout is substantial, its nickel dress alone making it a ready seller, besides, it is made by a Western stove factory for Western people only.

Financial Post

Was as inevitable as it was necessary

FIRST ISSUE
25,000 COPIES

Saturday, JAN. 12th, 1907

This Weekly will contain all the financial news available on investments. Accuracy is aimed at, but technicality is avoided.

The Post will print reliable news in a readable manner. Finance has its romances as well as its dry bones.

Every Investor, large or small, can find something that will interest him. Canadian securities will be fully and completely dealt with each week.

A page will be devoted to banks and banking interests. There will be special articles for depositors.

Every Young Man determined to make a success of life will be interested in the self-help articles.

SPECIAL FEATURES OF THE FIRST ISSUE

THEN AND NOW—An entertaining and instructive story in parallel columns, showing what a well-known London paper thought of C.P.R. in 1881, and what it thinks 25 years later.

THE GRAND TRUNK PACIFIC—AN INVESTOR'S ANALYSIS—THE QUESTION OF FIXED CHARGES—A COMPLETE MAP OF THE SYSTEM.

THE HUDSON'S BAY COMPANY—The graphic story of the market advances of our oldest joint stock company.

Other special articles by expert writers on Municipal Bonds, the Grain Situation in the West, Branch Banks in the North-West, Cobalt Considerations, the Saving Habit.

THE FINANCIAL POST OF CANADA is a twentieth century newspaper which no investor in Canada—especially at this time—can afford to be without.

Mailed to any address in the Dominion, United States, Great Britain, and Europe for **$3.00 annually.**

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade, a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

Letter Opener.

The London Rolling Mill Company, London, Ont., have supplied their customers with a very neat paper knife for the office desk. The novelty is a very useful and certain to be a lasting reminder. Customers who have not received samples should mention this paper when asking for one.

Contractors' Supply Calendar.

Amiot, Lecours & Lariviere, Montreal, dealers in contractors' supplies, are sending to the trade a 1907 calendar, containing illustrations of several of the lines carried by them. This calendar is of a good size for office use and will be sent to anyone who mentions this paper when writing.

Memoranda Calendar.

A very neat calendar of a most sensible sort has been issued by Sybry, Searls & Co., Cannon Steel Works, Sheffield, England. The upper part of the card shows three views of the interior and exterior of the works, and the calendar portion has the business man's week from Monday to Saturday on separate sheets with small blanks for memoranda each day. The reverse side contains a great deal of information of interest to metal workers. No doubt the publishers would be glad to send copies to any of our readers who make application.

Carborundum Booklet.

The Carborundum Co., Niagara Falls, N.Y., in a recent booklet, illustrate and list a few of the standard forms of carborundum stones, such as razor hones, oil stones, knife sharpeners, pocket stones, etc. Mention this paper if a copy is desired.

New List on Horse Nails.

The Canada Horse Nail Company, Montreal, have issued under date Jan. 1st, a revised hardware trade price list, for their hot-forged "C" brand horse nails. As several important alterations have been made, which are of interest to that portion of the trade dealing in horseshoe nails, we herewith reproduce the list in full: No. 4, $4.50; No. 5, $3.75; No. 6, $3.50; No. 7, $3.25; No. 8, $3.00; No. 9, $3.00; No. 10 and larger, $2.75 per box. All patterns, oval and countersunk, are the same price. They direct the attention of the trade, in making comparisons, to the fact that their standard of lengths are unchanged, and remain the same as adopted by them for many years, these differing materially from the lengths for the same numbers used by other manufacturers. The "C" brand No. 9 is the same length as other number eights and the "C" brand No. 12 is the same length as other number tens, etc. Particulars as to discounts, terms and conditions of sale may be had from the makers direct on application.

Western Canada Factory, 797 Notre Dame Ave., Winnipeg, Man.

DIVIDING THE PROFITS.

News comes from Minnesota of a strange agreement drawn up, signed and lived up to by G. H. O. Roberts, a hardwareman conducting a store at No. 108 Western avenue, Minneapolis, Minn. Distrusting his fellow men as partners, he drew up a document on May 12, 1893, and inscribed the same upon the flyleaf of his ledger, repeating it each year since. It ran as follows:

"I promise that, as the Lord shall prosper me, I shall act as His steward and give to Him as follows:

"'If I make $1,000 annually, $100; $1,500, $250; $2,000, $400; $2,500, $625; $3,000, $1,000; $5,000, $2,500.'"

Mr. Roberts claims that he has prospered by carrying out his agreement until he has reached the last-mentioned figures. He says he has no desire to go back to his old method of doing business before he made the agreement, and, in fact, would be afraid to do so, for he is certain that his present business would never have grown to its proportions if he had continued along the old lines.

FOUNDRY AND METAL INDUSTRIES

The Sandwich location offers many advantages over others suggested, but it is too early to make any definite announcement regarding the corporation's intentions.

The plant of the Goderich Engine and Bicycle Co. has been purchased by the Rogers Manufacturing Co., of Toronto. General foundry and railway specialty work will be done in the shops.

Promoters from Harvey, Illinois, have been at Windsor looking over a site on which they may establish a big manufacturing plant if the United States Steel Company carries out its proposal to build near Sandwich.

New York capitalists are in communication with the municipal council of Goderich, with a view to building a $5,000,000 steel plant. The concern would employ fifteen hundred hands, and would occupy one hundred acres of land.

Luke Thompson, engineer, has brought a suit against the Ontario Sewer Pipe Company for $10,000. Thompson was employed as engineer at the company's plant at Mimico, and was badly scalded by the breaking of an alleged defective connection.

A big deposit of high grade iron ore has been discovered near Desbarats, Ont., a few miles below the Soo. It is said to be as good as any in the Lake Superior country. It lies close to the water, and can be shipped to southern lake ports easily, making a much shorter haul than from Lake Superior.

The Hamilton and Fort William Navigation Company of Hamilton, have placed an order with the Canadian Shipbuilding Company for an 8,500-ton freight steamer, to be built for the iron ore, coal, and wheat trade. This steamer, which will be one of the largest on the lakes, will be built at the shipbuilding company's Port Colborne shipyard. The machinery will be built in Toronto.

The cost of copper refining by electricity has been reduced greatly in recent years in the American refineries by the introduction of mechanical devices for casting the anode slabs of crude copper and for charging and discharging the vats. According to an article by John. B. C. Kershaw in Cassier's Magazine, the expenditure on hand labor has thus been greatly reduced, and the time during which vats are laid off for recharging and cleaning has been curtailed. The current density used has also been greatly increased by the use of improved methods of circulating the electrolyte, and by the addition of a very small percentage of hydrochloric acid to the copper sulphate solution.

There are *good materials* in Sherwin-Williams Varnishes

The best varnish makers that live cannot make good varnish from poor materials. *Quality* varnish must be made from the best materials, in the right way, by men who know how.

The superiority of ***S-W. Varnishes*** is due in part to the materials we use. Take, for instance, the varnish gums. We are not dependent upon the local markets for our supply, but import varnish gums direct, unsorted. We are thus always sure of the quality. By sorting them ourselves, we establish our own grades and are able to use at all times the same quality and grade for each varnish.

Such advantage means much to you, as *quality* is of supreme importance in building a varnish trade that endures. Write today for further particulars.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

A new Y.M.C.A. building at St. John, N.B., will be erected at the cost of $60,000.

John McPherson Company, Hamilton, is increasing the capital from $100,000 to $500,000.

Building permits have been issued in Toronto from January 8 to 12, 1907, totalling $55,000.

The Merchants Bank, of Toronto, have procured premises at Streetsville, and will erect a brick bank in the Spring.

The Cyclone Woven Wire Fence Company, of Toronto, have increased their capital stock from $75,000 to $100,000.

The National Spring & Wire Company have leased a factory in St. Catharines and will get into operation in the near future.

The Imperial Coal Company, of Beersville, N.B., are planning to establish a brick-making plant with a capacity of 20,000 per day.

The Winton Automobile Company will establish a branch factory in Toronto. It is also intended to establish factories in England.

The plants of the Tilson Manufacturing Company and the Standard Fitting and Valve Company, of Guelph, will be rapidly pushed to completion in the early Spring.

The Temiskaming & Northern Ontario Railway Commission is asking for tenders for the construction of general offices at North Bay, at the cost of $25,000 or $30,000.

Cudahy Company, manufacturers of Dutch Cleanser, and H. B. Johnstone Company, leather manufacturers, of Toronto, sustained a total loss of $12,000 by fire, which occurred on Wednesday.

The pipe works of New Westminster, B.C., are rapidly nearing completion. The main building is 138 feet by 68 feet. It is expected that the company will be turning out pipe by the middle of next month.

There were erected in Montreal during 1906, 1,484 new buildings, valued at $7,745,023, as compared with 1,145 valued at $4,779,380 for the previous year. Ten structures exceeded in estimated cost $100,000 each.

Large consignments of sisal have been landed at Halifax this season by the Mexican Liner Sokoto. It is estimated that one hundred carloads per month will be imported via Halifax for Ontario manufacturers of rope.

Mr. Menzies and R. S. McLean, doing business under the name of the Sydney Electric and Construction Company, have dissolved partnership, and business will be carried on by Mr. Menzies and J. Morley, under the old name.

The Hugh Johnson Syndicate, of Ottawa, have procured premises on Queen street, Toronto, opposite the city hall. The price paid for this property was in the neighborhood of $175,000, and contracts have been let for a $6,000 brick building.

The contract for the locomotive shops at Moncton, N.B., for the Intercolonial Railway, to replace those recently burned, has been awarded to a Montreal firm, at a price of about half a million dollars, and will be built entirely of concrete and steel.

It is feared that the West Indian Electric Company, which operates tram cars, telephones and an electric light system in Kingston, Jamaica, must have lost heavily by the earthquake. The company is owned in Montreal. The capital out is $800,000 stock and $600,000 bonds.

The Ontario Wind Engine and Pump Co., of Winnipeg, has been awarded the contract for a 75,000-gallon water tank on a 50-foot tower for the waterworks system of the town of Arcola. The water is being brought to the town from four or five miles distant and forced into the tower for domestic use and fire protection.

The Toronto Plastering and Supply Company assigned to Osler Wade last week. This company was incorporated about a year ago, but it made a poor start, locking up all the capital in buildings and plant. No money was left for running expenses, and an effort to procure capital for this purpose was not successful.

Nine new industries have been located in Toronto during 1906. These are the Kindall Bed and Mattress Co., St. Louis; Blanchite Process Paint Co., New York; Canada Bolt and Nut Co., Boston; De Sauga Silk Co., St. Etienne, France; Chemical Laboratories; Dominion Carriage Works, Berlin Electrical Manufacturing Company.

The Sherbrooke Novelty Company has been incorporated with a share capital of $20,000 for the purpose of manufacturing electrical and mechanical appliances, household utensils and smallwares. The head office will be at Sherbrooke, Que., and the directors will be E. R. Ebbitt and A. C. Snowden, Montreal; R. A. Wright, A. T. Boydell and J. A. Swan, Sherbrooke.

The ratepayers of Port Arthur have voted to guarantee $75,000 worth of bonds for the Meisel Manufacturing Co., and to loan the Seaman-Kent Co. $15,000. The Meisel Co. will establish works for the manufacture of mill machinery and heavy harvesting implements. The Seaman-Kent Co.'s factory will be devoted to the manufacture of hardwood flooring, mantels, etc.

A large brick building at Point Edward, formerly used as a warehouse and pattern shop by the Canada Machinery Company, was destroyed by fire on Jan. 15, with a loss of fifteen thousand dollars. The building contained patterns formerly used by the company valued at five thousand dollars. The origin of the fire is unknown. The main part of the plant was destroyed by fire two years ago, and only the pattern shop and office stood. The latter was threatened, and was saved with difficulty. The loss is partly covered by insurance.

The Schultz Manufacturing Company has been incorporated with a share capital of $50,000 to purchase the business of Ernest Schultz, known as The Schultz Manufacturing Company, makers of stamped, pressed and spun metal goods, castings, lamps, lanterns, etc., with head office at Hamilton and directors to be E. P. Schultz, A. H. Brittain and E. A. Schultz, of Hamilton.

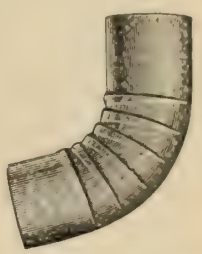
The Western Canada Development Company has been incorporated with a $1,000,000 capital, to carry on business as miners, coal miners, oil producers, refiners and gas makers, in any part of the Dominion of Canada with head office to be at Winnipeg, incorporating J. S. Hough, A. C. Ferguson, C. Williams, E. B. Lindsay and W. M. Graham, all of Winnipeg.

A wire cloth factory, which will give employment to about 700 people, will be established in Montreal in the spring. The plant will also manufacture wire screens and many kinds of wire novelties. The new company, which will be largely composed of American capitalists will be capitalized at $200,000. A factory for the manufacture of spokes, wheels and other articles of wood used in the building of vehicles will also be established. Montreal will be the distributing point for the various provinces.

A NOVEL DOOR LOCK.

A door lock of decidedly unique form has recently been invented by Peter Ebbeson, of St. Paul, Neb. While the construction of this lock is not complicated, yet it has been ingeniously designed to prevent operation with a false key. Furthermore, it comprises a latch of such form as to prevent shaking or rattling of the door. The lock consists of three disk-like sections, A, B, and C, the disk B being stationary and the others revolvable. The disks are mounted in a socket in the door and project from opposite sides thereof. The latch is operated by a pair of knobs at opposite sides of the door, which are respectively secured to the disks A and C. In the face of the disk A is an eccentric slot, adapted to receive a stud projecting from the door frame. By operating the knob of disk A the latter may be turned to engage the stud in the eccentric slot, thus locking the door. The disk C is connected with the disk A by a series of bevel gears, so that by operating the knob of disk C, it is possible to rotate the disk A to latch or unlatch the door. In order to lock the door a novel mechanism has been provided in the central disk B, a barrel being mounted in this disk. This barrel is provided with a bolt, which is adapted to engage a slot in one of the bevel gears, and thus prevent rotation of the other two disks. In the barrel is a tumbler, which is carried on a short shaft mounted to slide in slots in the barrel. This tumbler is provided with a projection at its upper end adapted normally to register with the central one of three flanges, projecting from a block above. Now, in order to unlock the latch, a key is inserted in the barrel, and this presses the tumbler, when the projection thereon clears the central projection, and the barrel may be rotated to move the bolt clear of the bevel gears. The tumbler is held in normal position by a pair of springs which bear against its shaft. It will be observed that the ends of the tumbler are of odd form, which the key must fit to prevent the tumbler from tilting on its axis when being pushed clear of the projection. If a false key is introduced, the tumbler will be tilted up into engagement with the outer projections.

48-STOREY BUILDING.



The Metropolitan Life Co. will erect a tower in New York, as an annex to their main building. The tower when complete will be the tallest structure on earth. Height above sidewalk 690½ ft.; number of stories below sidewalk, 2; grand total floor area of new Metropolitan building, 1,035,663 square feet (about 25 acres.)

A REMARKABLE WRECK.

An extraordinary and expensive cement advertisement was furnished by a recent shipwreck. The ship Socoa, bound for San Francisco with a cargo of cement for use in the rebuilding of the city, was wrecked off the Lizard on the Cornwall coast. The ship struck a rock, which tore a large hole in her side, and remained fastened as upon a pivot. When the salvage crew arrived to see about taking the Socoa from her perilous position, says The Cement Age, the men found a remarkable condition of affairs. The water had entered the hold and its action upon the cargo had caused the cement to set. It had accommodatingly set hard around the rock that pierced the side of the ship, which now remains fastened there permanently in its unique position. The entire cargo has become as hard as stone, and nothing can be done with the ship except to dismantle as much of the wood as can be removed. The hull will remain there for many years as a conspicuous advertisement for the cement manufacturers.

CAPEWELL SALESMEN'S DINNER.

The first annual dinner of the Ontario salesmen of the Capewell Horse Nail Company, of Toronto, was held at McConkey's restaurant, Toronto, on Jan. 7th, and proved to be a very successful gathering, of a nature half social and half business. The chair was taken by the manager, Chas. H. Fleming, and for over three hours an interesting talk ensued regarding trade conditions and the progress the company had made during the past year. It is pleasant to record that the prevailing note of the discussion was one of decided optimism, and all the salesmen present reported favorably on conditions in their respective territories, and that there was a generally expressed determination that 1907 should eclipse all previous records. An attractive menu card was prepared, each dish bearing some reference to the company's product. Those present were Chas. H. Fleming, manager; F. E. Mews, chief accountant; and Messrs. J. Crothers, W. T. Crosby, F. May, C. Ardies, W. A. Dean, G. W. West and J. R. Myers, traveling salesmen

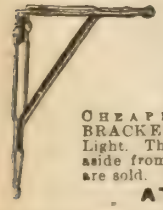
Accidental Discharge Impossible—

True only if it is an

IVER JOHNSON

This is why

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson never fails when you **pull the trigger** and never "goes off" when you don't.



Iver Johnson Safety Automatic

Prices—Hammer $6.50, Hammerless $7.50.

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply

Please send for descriptive catalogue, free upon request. It tells all about it.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

Will Hold up a Shelf

That's what a shelf brackt for.

For this purpose there can be NOTHING BETTER, NOTHING CHEAPER than the BRADLEY STEEL BRACKET. It is well Japanned, Strong and Light. The saving on freight is a good profit aside from the lower price at which the goods are sold. Order direct or through your jobbers.

THE FINANCIAL POST.

To fill one of the greatest journalistic openings yet presenting itself in Canada, The Financial Post has appeared, under the direction of Lt.-Col. J. B. MacLean, of the MacLean Publishing Co., Montreal, Toronto and Winnipeg, and Mr Stewart Houston, a well-known financial writer of Toronto. By its first number, issued on Saturday last, the paper proves its ability to fill the position. The aim of the publication as set forth by its publishers is to present to the public in a popular manner accurate information relating to the financial interests and the legitimate investments of Canada—not only news on these subjects, but the results of special enquiry from the best authoritative sources by expert writers. In the first number appear articles on the Hudson's Bay Company, the Grand Trunk Pacific, Banks in the Northwest, Cobalt Comparisons, and an especially interesting collection of financial authorities' opinions regarding C.P.R., 25 years ago and at the present day. The Post begins under auspicious circumstances, in the fact that it has behind it a well-tried publishing firm, and the early struggles of the ordinary periodical will be obviated by an organization already perfected. The MacLean Publishing Co., which was established 20 years ago, is now the largest concern of its kind in Canada, and owns six trade papers, The Busy Man's Magazine and a number of provincial dailies and weeklies—twenty-one in all.

ST. JOHN JOBBERS MEET.

The annual meeting of the St. John Iron and Hardware Association of N.B., was held on January 8, and the following officers were elected: President, W. S. Fisher; vice-president, J. M. Robertson; secretary-treasurer, John J. Barry; directors, W. H. Thorne, Thomas McAvity, M. E. Agar.

Hardware Dealers Should Wake Up—

to the fact that **SHEET METAL BUILDING GOODS** could be made a large and ever increasing factor in their business. Farmers, manufacturers and all owners and builders are daily demanding these goods because they fill satisfactorily the gap which is being left by the diminishing supply of good and cheap timber. Some dealers have already established a considerable trade in this line, proving that it can be done, but it's "only as a drop in the bucket" compared to what's to come. If the **HARDWARE DEALERS** and **TINSMITHS** don't look after this valuable trade, they will live to regret it. **Some one else will reap the harvest.**

Don't say—"**There's nothing in it for me**"—because there certainly is, providing you have the **RIGHT GOODS** and the **RIGHT FIRM** behind them. It doesn't matter about the manufacturers who sell direct to the consumer. One good, square firm, who will **PROTECT** and **HELP** a good orginization of agents, can, with those agents, do more business than three or four of the other kind.

We can show you—all we need to prove to you how this combination will work in 1907 is some more good agents—we've got the goods and the other qualifications. One of our representatives will be along your way soon after New Years to talk to you on the subject. If you are interested drop us a line at once and make certain that you will not be missed.

Western Distributing Agents, **THE McCLARY MFG. CO.,** Winnipeg and Calgary.

Persons addressing advertisers will kindly mention having seen their advertisement in Hardware and Metal.

Paint, Oil and Brush Trades

RAW AND BOILED OIL.

For some purposes raw oil is preferable to boiled. The raw oil does not harden as quickly as the boiled, consequently is more in evidence for outside work. In speaking on the subject of oils an old veteran of the brush, quoted by the Canadian Painter, said :—"Raw linseed oil generally finds most favor. It is clear works freely, and in white lead paint on outside work requires the addition of little driers. It allows the paint to cover well, and is durable. Mixed in raw oil a paint dries with a glossy surface, which is a factor of durability. Boiled oil, on the other hand, is for white lead paints, less satisfactory than raw. Though a paint mixed with it may go further, it does not cover so well, is apt to discolor light tints, is harder to spread, less durable, and a constant source of blistering. Where the use of boiled oil comes in is in mixing dark colors for outside work, such as Brunswick green, Indian red, bronze green and such colors, obtained by a painter in a dry state. The comparatively thick condition of boiled oil assures a better gloss under these circumstances, and assures their drying under ordinary conditions without the addition of driers."

TURPENTINE MARKETS.

The following is an extract from the Savannah Naval Stores Review, on the cause of the advance of turpentine : "So far this Winter there have been but three or four days that could be called cold, and there has been an absence of rain equally noticeable. As a result of this state of the weather the turpentine farms have practically cleaned up everything in sight. The boxes, as one man remarked, have been "wiped dry," and everyone is looking for an almost total cessation of receipts at any time. The impression prevails in trade circles that the late receipts of the season of 1906-07 and the early receipts of 1907-08 will be noticeably small. As a result the feeling prevails that conditions are in favor of a continuance of high values, and that even better values than at present prevailing are not unlikely in both spirits, turpentine and lower grades of rosins. Buyers seem desirous to gather in stocks of turps while there are any to be had, although they naturally do not like to run the market up at their own expense. Stocks are not heavy and as there are probably three months ahead during which the consumers must be fed from the stuff now in hand and [illegible] lots to arrive there appears to be good basis for the bullish feeling that is beginning to show itself, and which may bring important developments at any time."

PROFIT IN PAINTS

In the modern, well-stocked hardware store ready-mixed and ready to use paint is one of the important staples. It is a convenient commodity, a good seller and a profit maker. The enterprising retailer will, therefore, see to it that his paint stock is kept complete and fresh and that it is given its full share of display in the store.

The great bulk of the ready-mixed paints carried in stock by hardware dealers is the product of well known and responsible firms whose guarantee of weights and measures may be relied upon. The quantities required for any given amount of space to be covered may therefore be learned from the dealer with accuracy, whereby waste and unnecessary expense are avoided and considerable annoyance to both dealer and consumer is obviated.

In buying ready-mixed paints prepared by one of the well-established paint houses the purchaser has the satisfaction of knowing that he is getting much better paint that can be prepared by hand, finely ground and perfect for all purposes in its completed state.

Another advantage of the ready-mixed paints handled by the hardware dealer is that the colors are accurate and uniform at all times, so that when any color has to be duplicated it can be done with exactitude and confidence. In the manufacture of such paints high-salaried chemists and scientific experts superintend the various processes for the makers, and the finest machinery being used, under the factory system, the results obtained are at all times uniform and exact. Manufacturing in large quantities also makes the product cheaper than hand-mixed paints, as well as more reliable and convenient.

In wearing and lasting qualities ready-mixed paints of good brands are superior to any others, while varieties of colors and shades can be obtained that are unknown or impossible with hand-mixing.

Not the least important advantage gained by the use of ready mixed paints is the saving of time. These paints are always ready for use and there is true economy in their use.

Millions of dollars are invested in the paint business of Canada, and each maker strives to obtain the highest perfection of his product in all meritorious qualities. The result is that the retailer can buy stocks with confidence, knowing that he is securing paints that will give every possible satisfaction to the consumer.

Ready-mixed paints are a profitable line for the hardware dealer to handle and a large business can often be worked up in special brands. In communities where such paints are not in general use a little systematic advertising of their merits will often bring about their use in large quantities to the advantage of all concerned.

LISTEN

You are having all kinds of inducements, "good and otherwise," "mostly otherwise," offered for your Paint business. Exclude the hot air, then boil them down to reasonable business facts, and compare what is left with our Hollywood proposition, and we get the business as sure as you are alive.

BRANDRAM BROS & CO
BRANDRAM'S
B. B.
WHITE LEAD
MANUFACTURERS LONDON ENGLAND

An Important Announcement regarding "Anchor" and "English" Liquid House Paints.

FOR some time we have been supplying the trade with Paints put up under both brands, but for various reasons we find it advisable to sell hereafter only **"ENGLISH" LIQUID HOUSE PAINTS**. The two brands were identical in quality, the only White Lead used in their manufacture being Brandram's B. B. Genuine White Lead, the world's standard for close on to two centuries. So when we sell you **"ENGLISH" LIQUID HOUSE PAINTS** in place of "ANCHOR," you will know that you are getting the same Paints as you ordered under "ANCHOR," and we would ask you to get into the way of specifying **"ENGLISH"** in your orders in place of "ANCHOR." We would also ask you to tell your cnstomers that **"ANCHOR"** Liquid House Paints are now called **"ENGLISH,"** and so assist us to familiarize consumers with the name **"ENGLISH"** as the name of the leading brand of **LIQUID HOUSE PAINTS**.

We maintain the **"ANCHOR"** trade mark on all our other Specialties.

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, January 18, 1907

The placing of orders for Spring shipment, alluded to last week, is assuming such proportions as to indicate an extremely brisk trade when the season actually opens. Manufacturers expect that from now on their mills will be kept busy.

Prices remain unchanged, and the only special feature is the very firm position of turpentine.

LINSEED OIL—We still quote: Raw, 1 to 4 barrels, 55c.; 5 to 9 barrels, 54c.; boiled, 1 to 4 barrels, 58c.; 5 to 9 barrels, 57c.

TURPENTINE—(In barrels)—The recent advance still holds, with a very firm market. Small quantities remain the same. We quote; Single barrel, 98c. per gal; two barrels or over, 97c. per gal.; for smaller quantities than barrels, 5c. extra per gal. is charged Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

GROUND WHITE LEAD—Still maintains its advance: Best brands, Government Standard, $7.25 to $7.50; No. 1, $6.90 to $7.15; No. 2. $6.55 to $6.90; No. 3, $6.30 to $6.55, all f.o.b., Montreal.

DRY WHITE ZINC—We still quote as follows: V.M. Red Seal, 7½c. to 8c.; Red Seal, 7c to 8c; French V.M., 6c to 7c; Lehigh, 5c to 6c.

WHITE ZINC—(Ground in oil) Prices remain firm at their recent advance. We quote: Pure, 8½c. to 9½c.; No. 1, 7c. to 8c.; No. 2, 5¾c. to 6¾c.

PUTTY.—Our prices are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladder putty in barrels, $1.75.

ORANGE MINERAL—Prices are as follows: Casks, 8c.; 100 lb. kegs, 8½c.

RED LEAD—The following quotations are firm: Genuine red lead in casks, $6.00; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs $6, and smaller quantities, $6.75.

PARIS GREEN — The following prices still hold good: In barrels, about 600 pounds, 23½c. per lb.; in arsenic kegs, 250 lbs., 23½c.; in 50 lb. drums, 24c.; in 25 lb. drums, 24½c.; in 1 lb. packets, 100 lbs. in case, 25c.; in 1 lb packets, 50 lbs in case, 25½c.; in ½ lb. packets, 100 lbs in case, 27c.; in 1 lb. tins, 26c. f.o.b. Montreal. Term three months net or 2 per cent. 30 days.

SHELLAC—We quote: Bleached, in bars or ground, 46c. per lb., f.o.b. Eastern Canadian points; bone dry, 57c. per lb., f.o-b. Eastern Canadian points; T. N. orange, etc., 48c per lb. f.o.b. New York.

SHELLAC VARNISH—Prices remain: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.50 per gallon.

CASTOR OIL—Our prices are: Firsts in cases, 8½c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

BENZINE— In bbls.)—We still quote: 20 cents per gallon.

GASOLINE—(In bbls.)—Our price is 22½ cents per gallon.

PETROLEUM—(In barrels) Our prices are: American prime white coal, 15½c. per gallon. American water, 17c. per gallon; Pratt's Astral, 19½c. per gallon.

10 Front Street East,
Toronto, Jan. 18, 1907.

Paint manufacturers report a very brisk season at present, as all hardware merchants are ordering before the spring advances.

Paris green is experiencing a great trade as the majority of orders are taken for English green which will arrive about the first of May. While the new shipping terms will not encourage the early buying of Canadian green, merchants will generally see the advantage of ordering early in view of the shortage expected.

The Carter White Lead Company, of Montreal, have closed down their corroding mill, partly owing to being unable to procure enough raw material, and partly to internal troubles.

Turpentine has again advanced owing to the great scarcity in Savannah.

Does your paint trade pay?

It pays many other men. It ought to pay you. There's paint used in your town — lots of it. Are you getting your share? You should!

Take a look at

Ramsay's Paints

for 1907. Ask for color cards, prices, conditions.

Get a paint that pays and the paint will pay YOU.

Want to see our traveller? We'll send him if you say so.

PAINT AND OIL MARKET.

CANADIAN PARIS GREEN HAS TAKEN QUITE AN UPWARD MOVEMENT, BEING QUOTED AT 25c. IN POUND PAPERS, BRINGING IT TO THE SAME LEVEL AS THE IMPORTED ARTICLE. MANY CLAIM THE "CANADIAN PARIS GREEN IS BETTER THAN ANYTHING ON THE MARKET."

To prevent disappointment please look for the

Canada Paint Company's

name upon each package.

We are now quoting $1.02 for single barrels and $1.07 in small quantities. Raw and boiled oil remain at last week's quotations.

WHITE LEAD—Ex Toronto pure white, $7.40; No. 1, $6.65; No. 2, $6.25; No. 3, $5.90; No. 4, $5.65 in packages of 25 pounds and upwards; 1-2c per pound extra will be charged for 12 1-2 pound packages; genuine dry white lead in casks, $7.00.

RED LEAD—Genuine in casks of 500 lbs., $6.00; ditto, in kegs of 100 lbs., $6.50; No. 1 in casks of 500 lbs., $5.75; ditto, in kegs of 100 lbs., $6.25.

DRY WHITE ZINC— In casks, 7 1-2c.; in 100 lbs., 8c., No. 1, in casks 6 1-2c., in 100 lbs., 7c.

WHITE ZINC (ground in oil)—In 25-lb. irons, 8c.; in 12 1-2 lbs., 8 1-2c.

SHINGLE STAIN—In 5-gallon lots, 75c. to 80c. per gallon.

PARIS WHITE—90c. in barrels to $1.25 per 100 lbs.

WHITING—60c. per 100 lbs. in barrels; Gilders' bolted whiting, 90c. in barrels, $1.15 in smaller quantities.

SHELLAC VARNISH—Pure orange in barrels, $2.70; white, $2.82 1-2 per barrel; No. 1 (orange) $2.50; gum shellac, bone dry, 63c., Toronto. T. N. (orange) 51c. net Toronto.

LINSEED OIL—We continue to quote: Raw, 1 to 3 barrels, 59c; 4 to 7 barrels, 57c; 8 and over, 56c, add 3c to this price for boiled oil. Toronto, Hamilton, London and Guelph net 30 days.

TURPENTINE—As predicted by us, turps have again advanced and we now quote: Single barrels, $1.05; 2 to 4 barrels, $1.04, f.o.b. point of shipment, net 30 days. Less than barrels, $1.07 per gallon.

GLUES—French Medal, 12 1-2c. per pound; domestic shee., 10 1-2c. per lb.

PUTTY—Ordinary, 800 casks, $1.50; 100 drums, $1.75, barrels or bladders, $1.75; 100-lb. cases. $1.90;; 25-lb. irons, $1.85; 25-lb. tins (4 to case) $1.90; 12 ½ lb. tins (8 to case) $2.10.

LIQUID PAINTS—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

BARN PAINTS—Gals., 70c. to 80c.

BRIDGE PAINTS—Gals., 75c. to $1.

CASTOR OIL—English, in cases, 9 1-2c. to 10c. per lb., and 11c. for single tins.

PARIS GREEN—On Canadian green, the base price should be 25¾c instead of 25c. English remains at former quotations, 25¾ base f.o.b. Toronto.

REFINED PETROLEUM — Dealers are stocking up heavily for the Winter. We still quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM — We quote: Canadian, $1.32; Pennsylvania, $1.58; Ohio, 96c.

MIXED PAINT ADVANCES.

Recent advances on mixed paints were largely owing to the increased cost of raw materials, tin cans, boxes and labor. Manufacturers hesitated individually to make a move that might meet with strong disfavor on the part of their customers, but a few of the stronger manufacturers made the advance and their example was followed by the others. In the majority of cases, customers received the announcement more favorably than had been expected, and the demand for brands of paint enjoying a good reputation was not lessened by a slight increase in price. In fact the advances had been expected by the retailer, as the high prices of raw material warranted the advance.

That the logic of events is strongly in favor of the advance is sufficiently proved by the mere fact that it has been made by practically every paint manufacturer. It would be impossible to bring all the manufacturers together into a concerted movement to this effect by mere urging. Not until each manufacturer saw that the life of his business depended on getting a better price for his product, commensurate with its increased cost, was he willing to declare an advance.

LEAVES PAINT FOR STOVES.

Gordon Ritchie, who recently accepted a position with the Montreal branch of the McClary Manufacturing Company, was not head of the selling staff of the Sherwin-Williams Company at Montreal, as reported. For the past six years he held various positions on the S.-W. office staff, but it was an injustice to both Mr. Ritchie and his former employers to connect his name with the position he was said to have resigned. Mr. Ritchie has many friends in the paint trade who wish him every success in the stove end of the business.

LATEST CANADIAN PATENTS.

The following up-to-date list of Canadian patents is reported to us by Egerton R. Case, solicitor of patents, and expert in patent causes, Temple Building, Toronto:—Isaac Peabody, St. Mary's, N.B., conveyors; J. J. Holmes, Chatham, Ont., refrigerating machines; Jas. F. Latimer, Toronto, apparatus for separating and refining graphite; Geo. A. Bennett, Winnipeg, cushions for bicycles; Thos. M. Morgan, Longue Point, Que., apparatus for burning cement; Thos. Wilson, Ottawa, adjustable roofs; Wm. J. Watson, Ladysmith, B.C., smelting furnaces; Hiram W. Hixon, Victoria Mines, Ont., blast furnaces; Goldsmith English, Windsor, Ont., the construction of electrical annunciators; Peter Stoddart, Copper Cliff, tapping jackets for blast furnace settling wells or for hearths; Fred. J. Gilmore, Montreal, apparatus for building submerged concrete works from above the surface of the water; Albert Belair, Ahuntsic, Que., burial caskets; Wm. C. Gurney, Toronto, gas ranges and stoves; Robt. N. Gundy, Guelph, cooking stoves and ranges.

Insist on Proofs

We're not making our paint story quite so strong as some of our competitors—because we don't need to. True, it's pretty widely known that every claim we make we stand ready to prove in the most effective manner. We state that

ARK BRAND

is just as good as good paint can be. It is enduring. There is lasting life and lustre in every drop and **hundreds of dealers say so right over their signatures.**

Richards Landing, December 12th, 1906.

The Benjamin Moore Co., Limited, Toronto, Ont.:

Gentlemen,—At the close of another season's paint trade, I wish to express my satisfaction in handling Ark Brand Paint. Customers ask for it—say they want no other. I have now handled it for 7 or 8 years. Your Muresco is the best wall finish I have ever handled. It works so easily that anyone can apply it, and in every case it gives splendid results.

Yours truly,

JAMES R. MOORE.

ARK BRAND has built up more paying trades than any other paint on the Canadian market to-day.

Of course you handle

MURESCO WALL FINISH

There may be a better wall finish on the market some day. **Muresco** is the best to-day.

What's in a Name

Without Quality to Back it Up?

"STERLING" PURE PREPARED PAINT is not particularly unlike many other mixed paints in the liquid form, or when first applied.

BUT THE DIFFERENCE becomes more and more apparent as the months and years roll by, for "Sterling" Paint will present a smooth, bright, glossy appearance long after other paints have faded, peeled and disappeared. IT LASTS.

"Sterling" Paint is always uniform, has more body, covers more surface and is more durable than any other paint made in Canada.

We are determined that, cost what it may,

"STERLING" PURE PREPARED PAINT

shall always be known as the BEST PAINT

"STERLING" IN NAME **"STERLING" IN QUALITY**

THE HOUSEKEEPER'S DREAM.

I dreamt that I dwelt in Alabastined halls,
Alabastined ceilings, Alabastined walls,
Where the fairies love to congregate and meet
The air is so etherial, pure and sweet.

Cupids and fairies will visit you at night
In rooms, Alabastined beautiful and bright,
From kalsomines or wall papers tainted with decay
High on upward wing they rise and flee away.

ALABASTINE is the only Wall Coating, which is extensively and persistently advertised to the general public, and is what the people call for when they want anything in the line.

THIS IS NO DREAM

Our publicity campaign for 1907, as planned, is sure to more than double the already large trade for **ALABASTINE**.

Our new illustrated catalogue, "HOMES, HEATHFUL AND BEAUTIFUL" is the sensation of the season in the advertising line.

Get ready to supply the large and growing demand for **ALABASTINE** by ordering a full assortment, either direct or through your nearest jobber, and DO IT NOW.

The ALABASTINE CO., Limited, PARIS, Ont.

BLANCHITE

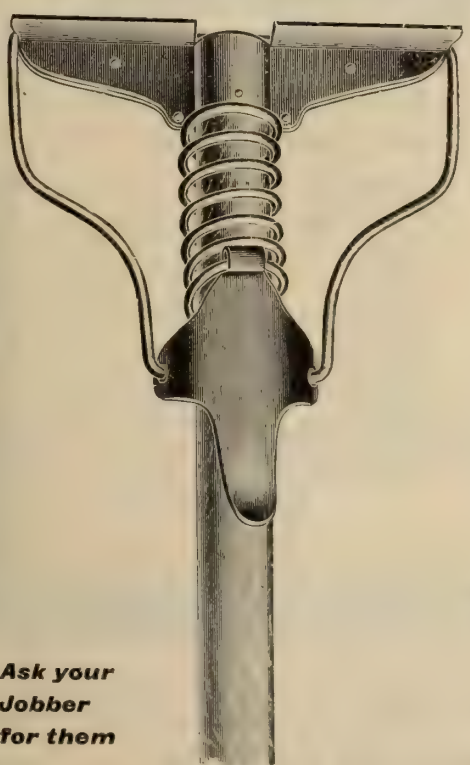
BLANCHITE Paints and Enamels are exclusively used on the magnificent new building of

"THE AUTOMOBILE CLUB OF AMERICA"

a club of millionaires with one of the most elaborate club houses in the U. S.

This is a fireproof concrete building. After exhaustive tests, the architect found BLANCHITE the only paint product that could safely be applied on the concrete walls and ceilings and not be affected by actions of cement and its components. All other paints showed discoloration.

Moreover, no other paint would stand the action of gasoline and garage oils, or endure washing to remove the effects of oils and grease.



This is one of the latest victories for BLANCHITE.

THE PLUMBING OF A COTTAGE

By J. A. F. Cardiff in the National Builder, Chicago

Article XIV.

Refrigerator Wastes.

In the modern cottages the refrigerator waste is supplanting the old style drip pan as a means of carrying away the drippings from the ice. This improvement is not only a great convenience to the housekeeper, but is also a more sanitary arrangement as the water which drips from the ice chamber is more or less slimy and unhealthy.

Under the refrigerator a safe, about fifteen inches square, is constructed by nailing hardwood beveled strips to the floor so as to form a pan and lining the pan with six-pound sheet lead turned over and tacked to the wood strips in the manner shown in Fig. 59. An outlet is left in the centre of the safe for the connection of the waste pipe. Over the outlet a removable strainer is placed so as to prevent any foreign substance from entering the pipe, and the space immediately about the outlet is countersunk. Sheet copper is sometimes used instead of sheet lead for the lining.

The piping should discharge over a sink in the cellar and should never be directly connected to the drainage system. There are times when the refrigerator is temporarily out of use and consequently there is not enough water to maintain the seal in the trap, so that if the waste was connected to the drainage system the foul air and gases would enter the house through the refrigerator waste. Discharging the pipe over a sink does away with this evil.

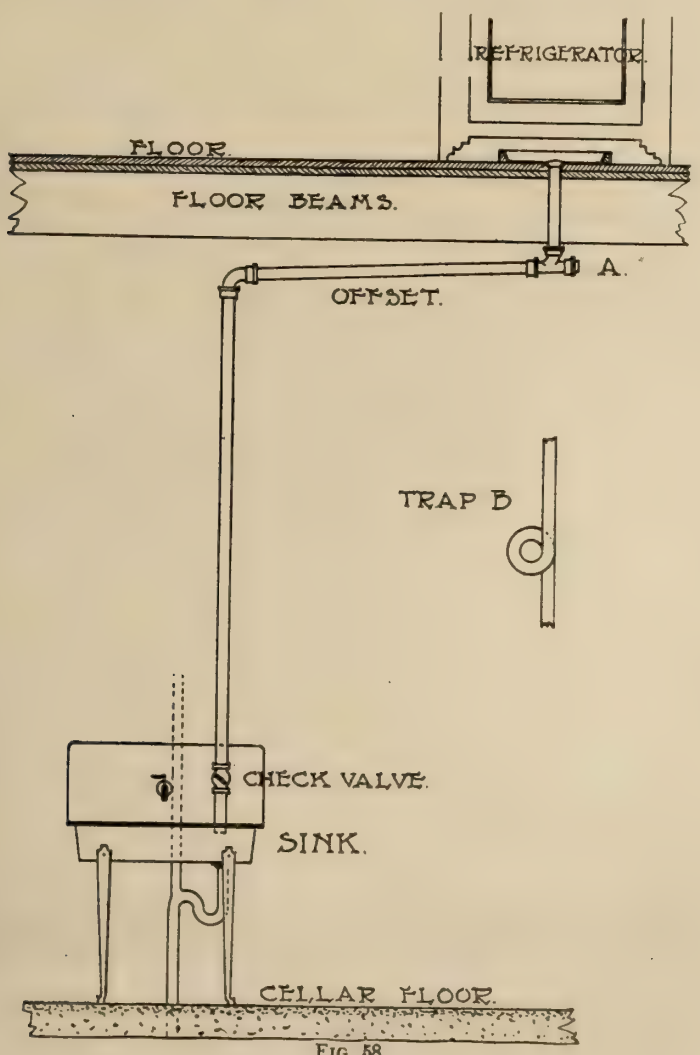

FIG. 58

The sink should be supplied with water and should be properly connected up to the drainage system, and the trap on the sink waste should be back vented. The sink should always be placed in a location where it will be used at frequent intervals so that the seal of the sink trap will be properly maintained.

The piping is usually of galvanized wrought iron one and one-quarter inches in diameter, with galvanized wrought iron recessed and threaded drainage fittings.

All horizontal offsets should be made

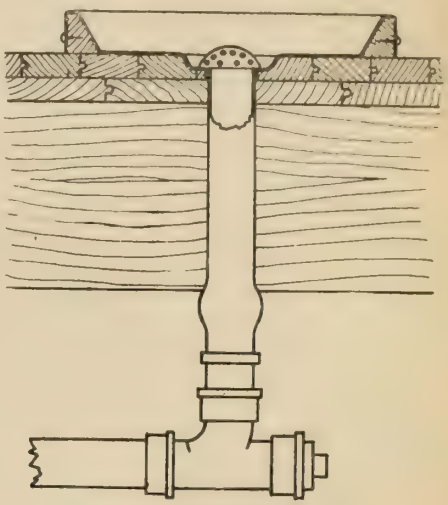

Fig. 59.

accessible by means of a cleanout as at "A," Fig. 58.

Near the outlet of the pipe a light swing check valve should be provided to prevent the cellar air from entering the rooms above through the waste pipe. No trap is required on the refrigerator waste when installed in this manner, but frequently the check valve is omitted and a trap formed by bending the pipe as at "B." This trap serves the same purpose as the check valve, but is not so good for the reason that the seal is liable to be broken by evaporation and the trap forms an inaccessible pocket for obstructions which may enter the pipe.

The connection between the safe and the iron piping is usually made with a short piece of lead pipe, soldered to the safe lining and wiped or soldered to a brass ferrule or nipple screwed into the hub of the iron fitting.

LUNKENHEIMER'S BIG CALENDAR.

The Lunkenheimer Company, Cincinnati, Ohio, who are represented in Canada by Cluff Bros., Toronto, have supplied their customers with a monster daily calendar which, besides telling at a glance the day of the year, constantly reminds buyers of the varied line of valves and engineering specialties manufactured by them. Steamfitters and engineers desiring one of the calendars should mention this paper when writing the firm at Cincinnati.

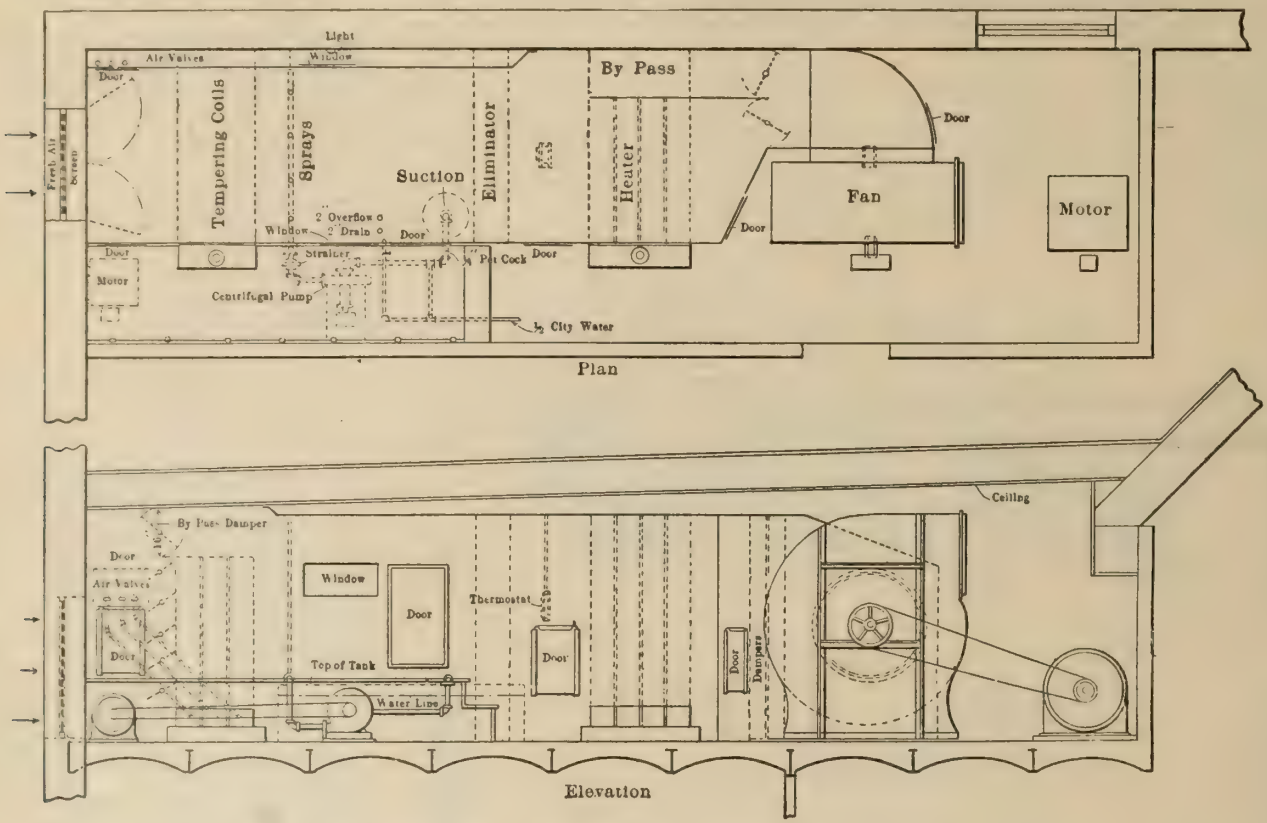
INTERESTING APPLICATION OF AN AIR WASHER

The following description of an air washing apparatus recently installed in the Illinois Steel Company's drafting room in Chicago has been supplied by the Buffalo Forge Company, whose system was used.

"In the past the only objection to the fan system of indirect heating and ventilation has been found in the introduction of dust and soot and occasionally foul gases due to the proximity of the ventilation intake being necessarily near to the street level or a neighboring chimney. This feature would be noticeably unpleasant in a drafting room because of the deposit of dust which would occur on the drawings to the annoyance of the draftsmen.

"The general layout and scheme of distribution of the ventilation is carefully shown on the accompanying drawing. The entering air passes into the tempering coils through a grating placed near the corner of the building. The tempering coils contain 1,000 feet of 1-inch pipe and serve in cold weather to raise the temperature of the air to 70 or 80 degrees F., whence it proceeds directly to an air washer.

"The washing chamber, in which we will include all the apparatus provided for washing and afterward removing the free moisture, has a rated capacity of 10,600 cubic feet of air per minute and is 4 feet 10 inches wide, 4 feet 8 inches high and 7 feet long.



"The washing itself is accomplished by spraying the incoming air through 76 specially designed nozzles, the direction of water projection being parallel to that of the air travel. Each of these nozzles will atomize, it is claimed, between 1½ and 2 pounds of water per minute as supplied by the pump. The water passing through the nozzle is atomized by centrifugal force acquired by its own circular path in leaving the nozzle exit.

"The washing is completed and the free moisture removed by drawing the air through what the writer will choose to call eliminator plates, a system of vertical baffle plates. The first part of each plate presents to the air merely a water covered surface to which the solid particles originally present in the air will cling and be left by the air as it passes to the second or rear portion of the plates which are provided with gutters running lengthwise to break the continuity of the water film and prevent it from being blown from the far side of the plates by the on-rushing air. The water removed from the air runs to a settling tank built beneath the eliminator in the concrete foundation and above which the eliminator plates are supported on 4-inch galvanized I beams. Provision is made in the settling tank for drawing off the "settlings" and then the clearer water is led to a well with which the suction of the small brass centrifugal pump belt driven from a 2 h.p. 440 volt A.C. motor, is connected and then this water, after straining, is supplied again to the nozzles. The nozzles are readily taken apart by removing the knurled cap with one's fingers to remove any scum that may have been deposited there.

"The humidity control is through the agency of a themostat, a heat indicating instrument. The amount of moisture which the air will absorb in the form of water vapor has been found after careful test to be controlled more by the temperature of the water exposed to the air, than through the air temperature. Therefore if the thermostat be set and calibrated by trial and it controls a steam jet playing into the water supplied to the spray nozzles, it can control the spray water temperature and hence the humidity which is kept at a constant percentage of the saturation point at all temperatures.

"The washing chamber and eliminator plate, which are of galvanized iron, are housed in the same materials, stiffly raced, riveted and soldered so as to be water-tight. In the washer casing is placed a water-tight door and two plate glass windows to allow inspection of its action while in operation. Connecting with this housing on the washer end is the inlet conduit and the other end connects with the heater coils.

"After leaving the heater coils which supply radiation from 1,500 feet of 1-inch pipe, and passing through a 70-inch lower provided with a double set of curved blades, the air is forced through the system of ducts shown by the building plan to the various parts of the drafting room. The blower is belt driven from a Westinghouse 5 h.p. 440 volt 3 phase A.C. motor and makes 475 revolutions per minute at a capacity of 10,600 cubic feet of air per minute."

Air Washer System in the Illinois Steel Company's Drafting Room.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, January 17, 1907

Business here remains excellent. There has never been a winter when general conditions have been so good. This is due, no doubt, to the great amount of building going on at present. Herebefore building operations are generally suspended with the arrival of Jack Frost, but this year from some cause or other, they have continued, and contractors are pushing things just as though the thermometer registered 80 degrees in the shade.

With this unexpected activity, jobbers are having a great deal of trouble and find it almost impossible to get deliveries.

Copper range boilers have taken a jump and the discount is now only 5 per cent.

Other prices remain the same.

RANGE BOILERS—We now quote: Iron clad, 30 gallon, $5; 40 gallon, $6.50 net list. Copper, 30 gallon, $33; 35 gallon, $38; 40 gallon, $43; 45 gallon, $50; 50 gallon, $58; 60 gallon, $68; 70 gallon, $80; 80 gallon, $95; 90 gallon, $115; 100 gallon, $150 net.

LEAD PIPE—Remains firm. We still quote 5 per cent. discount f.o.b. Montreal, Toronto, St. John, N.B., Halifax: f.o.b., London, 15c per hundred lbs extra; f.o.b. Hamilton, 10c per hundred lbs. extra.

IRON PIPE FITTINGS—We still quote: Discounts on nipples, ¼ inch to 3 inch, 75 per cent., 3½ inch to 2 inch, 55 per cent.

IRON PIPE—Supplies still short with last week's advance holding firm. We quote: Standard pipe in lots of 100 feet, regular lengths, ¼ inch, $5.50; ⅜ inch, $5.50; ½ inch, $8.50; ¾ inch, 11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.50, discounts on black pipe, ¼ inch, 59 per cent.; ⅜ in. 59 per cent.; ½ in. 68; ¾ to 2, 70. Discounts on galvanized pipe: ¼ inch, 44 per cent.; ⅜ inch, 44 per cent.; ½ inch, 58 per cent.; ¾ to 2 inch, 60 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12; 3-4 inch, $15; 1 inch, $22; 1 1-4 inches, $30; 1 1-2 inches, $36; 2 inches, $50. The discounts on black pipe, ¼ inch, 74 per cent.; ⅜ inch, 69 per cent.; ½ inch to 2 inches, 68 per cent. Galvanized, ¼ inch, 59 per cent.; ⅜ inch, 69 per cent.; ½ to 2 inches 58 per cent.

SOIL PIPE AND FITTINGS—Our prices remain as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER—We quote: Bar solder, half and half, guaranteed, 25c; No. 2, wiping solder, 22c.

SOLDER—Prices remain the same: Bar solder, half-and-half, guaranteed 25c.; No. 2 wiping solder, 22c.

ENAMELWARE — Recent advance on Canadian ware still holds. We quote: Canadian baths, see Jan. 3, 1907 list. Lavatories, discounts, 1st quality, 30 per cent.; special, 30 and 10 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special, $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, January 18, 190

Advances have taken place this week on both galvanized iron and copper range boilers, the advance on the first mentioned amounting to 25 cents on each boiler, 30-gallon Standard being now quoted at $5, and extra heavy at $7.75. On copper range boilers a new list has been issued as a result of the many sharp advances which have taken place in the last few months in the copper market. The old lists quoted $25, $29, and $33 on 30, 35 and 40-gallon boilers, while the new figures are $33, $38 and $43 on the same sizes. On the old quotations, the net list was quoted, while now special discounts are given to cover the difference in the advance on the list over the real advance in the cost of manufacturing raw material.

Other changes this week include the advance on J.M.T. globe, angle and check valves from 50 to 45 per cent.; the jump in cast iron fittings from 62½ to 60 per cent., and an advance on American enamelware sufficient to cover the recent advance in duty. It is also understood that an advance of $1 per tub is to be made on American baths. In addition to these changes, we have revised our quotation on iron pipe in sizes from 2½ inches upward.

While business is necessarily slow at this season, the volume of business that is being done is very satisfactory, both plumbing and heating contractors keeping most of their men at work on jobs which are being rushed to completion during the cold weather.

LEAD PIPE — The discount on lead pipe continues at 5 per cent. off the list price of 7c. per pound. Lead waste, 8c. per pound with 5 off. Caulking lead 5 3-4c. to 6c. per pound. Traps and bends, 40 per cent., discount.

SOIL PIPE AND FITTINGS — Recent advances are held to firmly with demand seasonable. Medium and extra heavy pipe and fittings, 60 per cent.; light pipe 50 per cent.; light fittings, 50 and 10 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE.—We are revising last week's figures on large sizes. One inch black pipe is quoted at $1.95, and one-inch galvanized at $6.60. Full list in current market quotations.

IRON PIPE FITTINGS—Cast iron fittings show several advances. Cast iron elbows, tees, crosses, etc., 60 per cent.; cast iron plugs and bushings, 60 per cent.; flange unions, 60 per cent.; nipples, 60 and 10 per cent.; iron cocks, 55 and 5 per cent.; Canadian malleable, 30 per cent.; malleable unions, 55 and 5 per cent.; malleable bushings, 55 per cent.; cast iron ceiling plates, plain 65 per cent.; cast iron floor, 70 per cent.; hook plates, 60 per cent.; expansion plates, 65 per cent.; headers, 60 per cent, hangers, 65 per cent.; standard list.

RANGE BOILERS—An advance of 25 cents has been made on all sizes of galvanized iron and we now quote: Galvanized iron, 30 gallon, standard, $5; extra heavy, $7.75; 35 gallon, standard, $6; extra heavy, $8.75; 40 gallon, standard, $7; 40 gallon, extra heavy, $9.75, net list. Copper range boilers—New lists quote: 30 gallon, $33; 35 gallon, $38; 40 gallon, $43. Discounts up to 15 per cent.

RADIATORS—Prices are very stiff at: Hot water, 47½ per cent.; steam, 50 per cent.; wall radiators, 45 per cent.; specials, 45 per cent. Hot water boilers are unchanged.

SOLDER — Quotations remain firm as follows: Bar solder, half-and-half, guaranteed, 27c.; wiping, 23c.

ENAMELWARE—New lists on enameled baths issued by the Standard Ideal Company on Jan. 3, show a 10 per cent. advance. Lavatories, first quality, 20 and 5 to 20 and 10 off; special, 20 and 10 to 30 and 2½ per cent. discount. Kitchen sinks, plate 300, firsts 60 and 10 off; specials, 65 and 5 per cent. Urinals and range closets, 15 off. Fittings extra.

A NEW EXHAUST HEAD.

In modern engineering the removal of water and grease from the waste steam of the power plant is considered quite essential to good operation. For this purpose exhaust heads are used, and the new head just put on the market by the Canadian Buffalo Forge Co. is the result of the applied experience of almost one-third of a century in building power plant equipment. This head depends for its operation on the excessive inertia of the water or grease over that of steam vapor, water weighing approximately seventeen hundred times as much as the vapor, volume for volume.

Exhaust steam, rising into the head, strikes the inverted cone deflector, and the water and grease, by the change of direction, are thrown to the outer shell, where they find their way to the drip pipe. On account of its small weight per cubic foot the steam readily changes its direction of flow and finds its way through the outlet to the outside air. The shell of this apparatus is carefully constructed of heavy galvanized sheet iron, which is strongly riveted at the joints and soldered, the drip pipes from the deflector and to the outside air being held in place by machine-threaded clamp nuts, so that there is no possibility of their working loose or breaking off.

THE ARMSTRONG MANUFACTURING CO.
292 Knowlton Street, Bridgeport, Conn.

A Certain Sense of Satisfaction

goes with every MERRELL PORTABLE HAND MACHINE, PIPE THREADING and CUTTING MACHINE. We build them that way.

For doing ALL kinds of threading—under ALL conditions—labor trouble and faulty material included—where speed, durability and ease of control count for something, our word to you is to investigate the MERRELL.

Whether it be stationary or portable—hand or power driven—30 DAYS FREE TRIAL must prove conclusively that your choice should be the MERRELL.

This Portable Hand Machine has encased gears, MERRELL standard quick opening and closing die-head, and the latest improved Cutting-off Knife.

Let us tell you more about this machine—The Chasers, Vise and the large range of work covered.

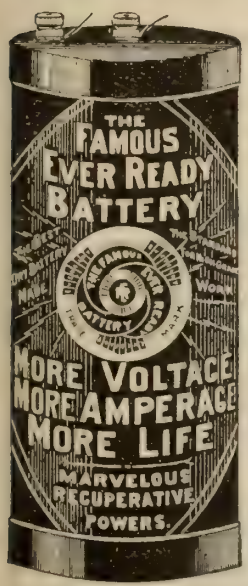
THE LINE TO PUSH

There are undoubtedly many people in your town whose business or home-demands require an unusual quantity of hot water. These Heaters are adapted for warming offices, conservatories and small dwellings, or supplying hot water for factories, stables, barber shops, etc.



It is a good time of year to push this line and keep the men busy during the dull season.

CURRENT MARKET QUOTATIONS.

Jan. 18, 1907.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

EVAPORATION REDUCED TO A MINIMUM

is one of the reasons why PATERSON'S WIRE EDGED READY ROOFING will last longer than any other kind made.

Mr. C. R. Decker, Chesterfield, Ont., used our 3 Ply Wire Edged Ready Roofing fourteen years ago, and he says it is apparently just as good as when first put on.

We have hundreds of other customers whose experience has been similar to Mr. Decker's.

SHREWD DEALERS RECOMMEND THE "SOVEREIGN" BECAUSE IT PAYS THEM TO DO SO.

That's one reason for the immense success of the "**Sovereign**" Hot Water Boiler.

There are other reasons quite apparent to all practical men, and enumerated by many dealers as they describe the simplicity, economy and perfections of the "**Sovereign.**"

The "**Sovereign**" Hot Water Boiler has simplified the heating problem, and, as a consequence, the demand is increasing with startling rapidity.

TORONTO.

Wouldn't you, Mr. Store-keeper, be worth more if you could do 100 per cent. more work?

That means that you can do ten hours work in five, because you can enter up your accounts and make up your customer's bill with one writing. You can do your york better, more quickly, and more accurately by the use of

THE CRAIN CONTINUOUS SYSTEMS

than by the old out-of-date methods. Then, again, the Crain binders are more durable, and better made than any other, and do not have metal parts protruding to scratch your desks. They will hold one or a thousand sheets, as you wish.

Drop us a card about any system you are interested in.

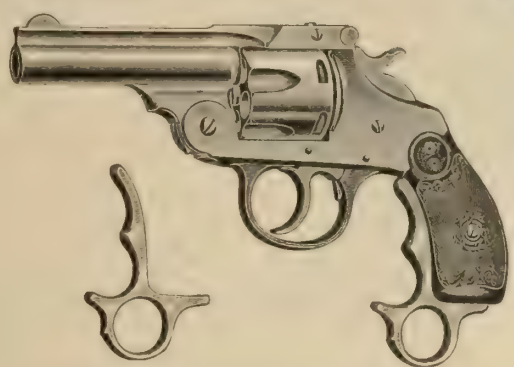
SAFE REVOLVERS



SAFETY HAMMER REVOLVERS
.22, .32, .38 Calibres

SAFETY HAMMERLESS REVOLVERS
.22, .32, .38 Calibres

Iver Johnson's grip can be furnished on these Revolvers at an extra charge.

No article should be selected with more care than a[Revolver.

For defence it must be sure and reliable.

For safety it must be so constructed that it will not "Fire" at the wrong time.

Dealers handling Iver Johnson Revolvers know that each of these weapons is absolutely safe. Accidental discharge is impossible.

THIS IS WORTH CONSIDERING

With these safety features the cost is no greater than for Revolvers without them.

SPECIAL SKATES
FOR SPECIAL PURPOSES

Have you ever thought of the value of being able to meet every taste, or whim, or fancy, or need of your customers? Of course, it's a pretty hard thing to do, but you can at least do it in SKATES if you have our complete line in stock. COMPLETENESS AND QUALITY are the invincible combination that have made our line so successful.

We draw your attention to a few illustrations of special skates which we make.

Figure skating is coming in again, which is evidenced by the demand we have for figure skates this year, and you will find the STARR FIGURE SKATE the most satisfactory you can put on your counters.

What to Do Next Month

February is a short month, but for the live hardwareman there is a lot to do. If stocktaking has not been done in January, it should be tackled at once as it is not only a big job in itself but it suggests many other important things to be done. An inventory sale should be advertised, short lines should be stocked up, departments which have not paid their share of the profits and expenses should be reorganized or done away with and the results of the inventory should be carefully studied for lessons showing how better results can be procured during the coming year.

* * *

Stocktaking is probably the most disliked job of the year. It is a mean job, but it is necessary and if it is gone after in the proper spirit the results can be made of far greater value than if it is tackled gingerly with kid gloves. Go at stocktaking as though it was determined to get something out of it. Keep an accurate memorandum of every article in stock and clean up everything that is dirty or shopworn.

* * *

An Eastern Ontario dealer recently bought a $4,000 stock of hardware and put ten tons of the stock in the scrap-iron pile. He didn't pay for the scrap—the man who had to stand the loss was the fellow who had evidently scamped his stocktaking. He had probably gone on year after year making an inventory of goods and fooling himself into the belief that he had several thousand dollars worth of saleable stock. Instead of having an annual inventory sale he kept hoarding up the old unsaleable goods, allowing them to become more unsaleable all the time. He evidently didn't figure that the space in his store, on his shelves and in his warehouse was given to goods which ought to be gotten rid of for anything above the scrap-iron price over the counter or for the old material figure out of the back door. He didn't count up the lost time in repeated handling of the stuff during the year and at stocktaking. But finally he learned his lesson—or if he didn't he ought to. He sold to a dealer with modern methods, a man who will have nothing but saleable goods taking up shelf room or floor space.

* * *

Another concern we have heard of went on paying splendid dividends for a number of years. It made a big name for itself, but one day there came a bump and when creditors put in an appearance it was found that the dividends had been paid on the strength of a wind-filled inventory. The concern thought they were sound and borrowed on their credit. The day came when the balloon burst, creditors flocked in and the house of cards crumbled to pieces.

* * *

Many a merchant who thought himself worth ten or twenty thousand dollars has found that instead of having it in cash or its equivalent it was in old and worthless stock. Make sure that in the inventory taken this year that the figures totaled up represent real dollars and not wind.

When a man takes up stocktaking his aim should be to find out what he is worth and how much has been made during the past year. In too many cases he is anxious to make himself believe he is worth more than he really is. He wants a favorable result and the tendency is for him to make the stock sheet tell too favorable a story. But some day this man will have to close out his stock and try and make his imaginary personal worth measure up with the real selling figures. If a merchant wants to know what stock he has he should know it exactly, figuring a fair percentage for depreciation. A wind-filled inventory won't fool the credit man in a wholesafe house. The only person it is apt to fool is the dealer himself.

If a system of stocktaking cannot be adopted showing at the end of each day the real condition of the business, try, by all means, to have an accurate inventory showing the actual situation at least once in each year.

* * *

After stocktaking has been completed and everything has been cleaned up an "inventory sale" will be in order to clean out any goods which are deteriorating in value. Many dealers have such a sale before stocktaking in order to bring down stocks to as low a point as possible. Both seasons are opportune times to push off such goods which the merchant has not found profitable and which can be replaced by better selling lines. It will be far better to stand a small loss now than a larger one later on, particularly as it brings cash into the till during the dull season.

* * *

There is no better season of the year to plan a new arrangement of the store than at stocktaking time. Stocks are at their lowest point. Holiday and winter goods are largely out of the way and spring shipments have not yet arrived. More time can be given now to a "spring housecleaning" or to installing a new silent salesman, cabinet of shelf boxes, etc., than later on, so the dealer who aims to make his store move with the times will get busy at once on securing quotations from the manufacturers of sehlf boxes, silent salesmen and similar fixtures.

Much depends upon the arrangement of the stock, and any dealer who has found during stocktaking that the space under the counters, or the top shelving or in out of the way corners in the warehouse has become a catch-all for odd articles, should devise some means whereby a better system can be followed in future. The more modern fixtures there are installed, the less opportunity there is for slovenly clerks to dispose of odd things. There should be a place for everything and everything should be kept in its place. But to keep things in their places a modern stock card system should be used in connection with modern store fixtures.

* * *

While stocktaking time is not usually a season when extensive buying is done it behooves every dealer to keep a keen eye upon the market reports, particularly this year, when nearly every line has either advanced sharply or is likely to move up higher. By buying early the dealer not only has the advantage of making certain the delivery of goods which are likely to be scarce, but he gets the advantage of present prices, often with a protection against a decline. From no quarter does there appear to be any indications, however, of lower prices during 1907 on the most used metals and materials which govern the great bulk of articles sold in the hardware store.

* * *

Take stoves, for instance. The cold winter has run stocks in the hands of manufacturers and retailers down to the lowest point in years. Pig iron holds firm at sky-high prices with stocks hard to procure in foreign markets, all Canadian furnaces being booked up for about a year ahead. Stove founders have already advanced stove prices once and furnaces and registers twice. Some have had to close down on account of the shortage of iron. A further advance seems certain. Under the circumstances it would appear that the dealer who books orders early stands a better chance of making money than the one who holds off in the possible hope that prices of iron may drop or that stove manufacturers will continue to disagree on the question of an advance.

* * *

Paints and white lead are other lines which should be booked early. Paint materials have gone up in price and the stiffness in the lead market and growing shortage of white lead on both home and foreign markets would point to further advances in the spring. Ever since the Government put the duty on white lead the tendency has been upward and the turning point appears to be a long distance off yet.

* * *

And in staple hardware lines the conditions are about the same. Jobbers find their chief difficulty to be the matter of securing goods to fill orders. Manufacturers are loaded up with business and with the increase in population the demand is steadily increasing. Prices, too, are on the advance, although most lines have already been marked up. It can be safely said of all shelf and heavy goods, as well as of metals, that the dealer who books his orders earliest this year is the one who stands the best chance of showing a margin on the right side of the ledger when another stocktaking season comes around.

Canadian Retailers Stirred to Action

Thousands of letters of protest being sent to the Postmaster General and Members of Parliament—Strong Arguments against proposed Parcels Post legislation Extracts from copies of a few of the letters written by Retailers.

It is doubtful if anything has ever stirred the retailers of Canada so deeply as the announcement made in Parliament on Dec. 7th last, by Postmaster-General Lemieux, that he was preparing legislation to amend the Parcels Post Law, the proposal including provision for a c. o. d. system, whereby goods could be sent to any point and collection made by the post office. It can easily be realized how this would work in favor of the retail catalogue houses, by obviating the necessity of sending the purchase price with every small order.

The announcement came just when Christmas activity was at its greatest, and consequently few retailers noticed the incident, particularly as the large daily newspapers which carry pages of mail order advertising took care not to emphasize or draw attention to the announcement, which was of particular interest to their thousands of retail traders.

Trade Papers Take Action.

The MacLean trade newspapers, however, were alive to the interests of the retailers and promptly investigated the report and suggested a method by which the trade could effectively oppose the measure. We urged that each one communicate at once with the local member of Parliament denouncing the proposal, and stating that he would be expected to cast his vote against it.

We also urged dealers to write the Postmaster-General direct, giving reasons why the legislation should not be passed and further suggested that the editors of the country newspapers be asked to support the position taken by their local advertisers whose business is endangered. The Ontario and Western Canada Retail Hardware Associations backed this up by circularizing every dealer in the four provinces which their organization covers, hardware dealers being urged to take prompt and united action in bringing their influence to bear on the Postmaster-General in opposition to his proposed amendments to the Parcels Post Law.

From every part of the Dominion the retail trade has responded promptly, and thousands of letters of protest have been forwarded to Ottawa. In many cases petitions containing the name of every retailer in a town have been sent to the members of Parliament to be forwarded to the Postmaster-General. This is as it should be. The retail trade should not lie down and be trampled upon without protest.

In one town close to Toronto the retail trade has suffered severely from mail order competition and yet have failed to take action, taking the pessimistic view that their efforts would be futile. That this is an exception, however, is clear from the large number of dealers who have sent to us copies of the letters they have forwarded to Ottawa. As will be seen from the following extracts from a few of them nearly every section of the Dominion is represesnted in the correspondence:

Extracts from Merchants' Letters.

"Now I am decidedly opposed to any such legislation. We have express companies who forward parcels with promptitude and at reasonable rates. Such a bill would build up catalogue houses and tear away many local businesses. If this Dominion is to prosper it must be by making trade conditions of such a nature as to give the greatest good to the greatest number. This bill would handicap such conditions."—Ontario.

* * *

"We believe such legislation would tend to favor a few monopolists, to the injury of a multitude of local merchants who, as a rule, rank amongst our best citizens and pay heavy taxes for the benefit of the localities in which they do business. Competition is sufficiently keen among local merchants to protect the consumer from over-charge. The parties soliciting this legislation aim at securing a good portion of the mercantile business in sections of the country where they pay no taxes."—Ontario. This was signed by a number of merchants and a gentleman signing himself an ex-M.P.

Has Hurt Trade in Britain.

"We learn that a bill will be introduced into Parliament at the present session to establish a cheap parcel post system in Canada, and whereby the post office will collect on all parcels, that is, provide a c.o.d. service. This means the introduction of the British parcel post system, a system that has ruined the business of the local dealer outside of the large centres in that country. The merchants of Canada will oppose this measure in the most emphatic manner and we ask you to use your influence to have this bill defeated, as it will seriously injure, if not destroy, in many places the enterprises that do most towards promoting a vigorous and prosperous growth in local towns and villages."—Ontario. This communication was signed by all the leading merchants of the town.

* * *

"The passage of such a bill would put a great many local retailers out of business, and put a large amount of extra work and expense on the postmasters. I hope you will oppose the measure."—Ontario. This merchant is also a postmaster.

* * *

"I would ask you to earnestly oppose this measure, as, in my opinion, it would be a great detriment to at least three-fourths of the people engaged in mercantile business. As it tends towards the centralization of trade in one or two cities, it would injuriously affect hundreds of other cities, towns and villages. It would also tend to the further burdening of the mails, on account of which the public is already suffering. I cannot see that there would be any general benefit resulting from such a measure, and in the interests of a large proportion of the people of Canada, and especially of this city and district, I would again ask you to oppose it."—Ontario.

* * *

"The growth and prosperity of this Western Canada surely depends upon the energy, prosperity and success of her local citizens."—Manitoba.

Will Affect Farmers Adversely.

"If this becomes law it will greatly facilitate the progress of Toronto and Montreal catalogue houses, which have already become a menace to the prosperity of our town and county. A consideration of this growing evil shows that it is unfair to local merchants, and in the end will be disastrous to those who encourage it. Local support is necessary to ensure good, healthy business, and progressive merchants are necessary to the growth and success of their towns. Without them there is no market, the largest taxpayers disappear, there is little or no demand for labor, and as a direct result, farmers' lands decrease in value, as an active market is necessary for the profitable sale of their produce. Merchants in small towns, particularly in a farming community, are obliged to give their customers long credits, often tide them over a period of misfortune, and handle at a loss much inferior produce, consequently they are placed at a disadvantage when brought into competition with catalogue concerns, whose business is conducted on a strictly pay-in-advance basis, and who are not called upon to pay anything locally."—Nova Scotia.

* * *

"I feel that we already have enough competition from this class of traders, who pay nothing in the way of local taxation, and I also feel that the general public would not benefit by the proposed change. People can buy as cheaply at home as from the catalogue houses, but they are influenced by the advertising features of the latter."—Quebec.

"You are, of course, aware of the immense amount of money sent out of the small towns every day to the catalogue houses for goods that command a good profit, leaving the local dealer to supply the staples at a very small profit, and pay the taxes."—Quebec.

Would Kill Local Trade.

"Not only would such legislation be unfair to the merchants, but every business would be adversely affected. The tendency would be to kill local trade, lessen local competition and enterprise, and depreciate real estate values. In order to make our ideas as plain as possible we will view as an illustration this village, with a population of about 800, six general, five grocery and two hardware stores, two harness shops, three merchant tailors, and a number of smaller businesses besides. Undoubtedly it may be admitted that competition is keen enough here. We conduct one of these general stores, carry a stock of from $12,000 to $15,000, employ ten hands the year round, pay rent, taxes and insurance. We take an interest in the progress of the village and foster the growth of our market. The result is good prices and accommodation for the farmers from the surrounding country. They cannot do without the local market and stores; it is impossible lor them to drive to Toronto with their butter, eggs, fowl, etc. It is clear that prosperous towns and villages tend to create prosperous farmers. One cannot well do without the other and this condition is a natural one that exists all over Canada. We purchase the product of the farm for which we pay prices established by local competition. During the past few weeks we paid out for fowl alone over $5,000. By the combination of retailing goods and handling farm produce we are able to conduct and sustain a fairly profitable business, and at least four other stores here are conducted on similar lines. We have nothing to fear from fair competition, but should be protected from legislation giving the mammoth mail order houses any unfair advantages."—Ontario.

Detrimental to Progress.

"Such a bill, should it become law, would be a menace to our interests in proportion as it would benefit a class of merchants who reap where they do not sow, and who do business in communities to whose progress they do not contribute by their presence, their energy or their taxes. We would be sorry to oppose a measure that would contribute to the comforts and conveniences of the people as a whole, but in opposing the measure in question—which we will do most determinedly, and which we ask you to do as representing us—we would point out that a policy which tends to the centralization of business, and the nurture of large concerns, cannot but be detrimental to that progress in country communities which we must all desire to see."—Alberta.

* * *

"We could fill pages giving our individual reasons for asking you to oppose such a bill, but have confidence in your ability to grasp the full effect that it would have without our going further into the matter."—Saskatchewan. This was signed by every business man in the town.

"We would ask you to keep tab on this matter, and oppose it to the extent of your ability, as it seriously menaces trade in every place east of Montreal, especially in Prince Edward Island. . . . Every dollar that goes out of the province impoverishes it just that much."—Prince Edward Island.

* * *

"I respectfully call your attention to the stand which I take in the matter of the bill about to be introduced re extension of the parcel post system. I believe this is merely a scheme of the departmental stores. If adopted it would be a source of injury to every rising town in the west. Our country needs population, not monopoly—legislation that will fill the west with business centres instead of crushing out the small dealer."—Alberta.

In the Interests of the Few.

"This legislation would be in the interests of the few. It would be unjust to the local retailer, who would, in effect, have the Government in league against him. It would be another step toward centralization, and another favor given to large corporations. It is of great importance to the farmers that large and up-to-date stores be found at their very doors. The legislation referred to would not help this, but operate against it."—Ontario.

* * *

"This measure, I think, would be very unfair to town, village and country merchants. We are here on the ground where we have to pay our taxes, and where we have an interest in the welfare of our particular locality. We have a right to be protected so far as possible from what would certainly be unfair means employed by mail order houses, who have no interest whatever in our community, except to get our trade from us. If you can see your way clear to oppose this measure I think you would be conferring a favor on not only the business men, but the whole community in general."—Ontario.

* * *

"Progressive communities the country over are almost exclusively those who have the spirit of, and practice, home protection. Progressive towns always increase the land value of the adjacent territory. The large retail catalogue houses, by absorbing the trade of the smaller towns and villages, act as a detriment to their welfare, and also that of the country adjacent."—Saskatchewan.

Merchants Pay the Taxes.

"For the Government to step in and assist mail order houses to distribute their goods, at a nominal charge, would be most unfair. . . . We pay taxes to keep up our roads, streets, bridges, etc., but if the mail order houses, without assisting us in our municipal expenditures, are to be enabled to take our business away—the means provided by the Government—what benefit do we get from these taxes?"—Ontario.

* * *

"Mail order houses do great injury to our town and country stores, and are no benefit to those who purchase goods from them. I have compared the goods with what we sell, and see no difference."—Nova Scotia.

Manifestly Unfair.

"We do not fear any competition if he is placed on an equal footing with ourselves, but it is so manifestly unfair that we should have to pay a business tax, support our schools and our churches and be expected to respond to every local demand, and the catalogue houses come in without paying any of these things, that we shall expect you to oppose the measure when it comes up."—Ontario.

* * *

"By passing such a bill the Government would certainly, whether consciously or not, be playing into the hands of the catalogue houses."—Quebec.

* * *

"Quite a number of our people are thoughtlessly sending a great deal of their money to the city stores, thereby cutting their own throats, ruining their home town, decreasing value of property, etc. They are building up Toronto and other cities at the expense, and to the stagnation, of their own community. If people would spend their money at home it would come back to them in a better town, better schools, better churches, better stores, better social advantages, and increased value of property. The city stores, on an average, don't sell any cheaper than we do. They don't help pay taxes, etc. They are great and clever advertisers, and, you know, fields are green far away. Mail order competition is harmful enough in the smaller towns without giving them extra legislation."—Ontario.

No Special Favors.

The retail trade do not seek any special favors from the Postal Department, and are quite right in protesting against special privileges being given the large mail order houses. The Toronto Globe, in commenting editorially on the Postmaster-General's statement in Parliament, said: "In this promised reform there is nothing revolutionary and the moral sense of the people, as well as of the Government, gives an assurance that no private interest will be treated unfairly." The real object of the bill, however, is the unfair treatment of private interests, and behind it are the T. Eaton Co. and other mail order concerns. The editorial comment referred to, whether intentionally or not, tends to disguise as a public benefaction a measure which will benefit one section of merchants at the expense of another section.

In order to guarantee that "no private interest will be treated unfairly" the retail dealers must be up and doing. If there are any who have not yet written their M.P. and the Postmaster-General they should do so at once. And in every town from Halifax to Vancouver a meeting of the merchants should be called to make certain that the campaign will be continued until the objectionable features of the proposed legislation have been withdrawn.

Doing Business on Cash Basis

Sensible Article by E. Thurston in the National Hardware Bulletin—How a Credit Business was transferred to a cash system.

Perhaps I can interest you and some of your readers in a few words about myself and my business, as my method of doing business is somewhat distinctive from the general run of hardware store policies in the fact that I conduct a hardware store on a cash basis and keep so close to cash in every transaction, both in store and shop, that I feel that I can rightly claim the distinction that I do a cash business. History is always dull unless it comes home to the reader of it. I hope to get near home to some of my fellow hardwaremen, and not only interest but be of some benefit to them in point out a surer and pleasanter path to pursue.

A few years ago I bought out a small tinshop that was being run in connection with a general hardware store and lumber yard, and as I was handy at all kinds of mechanical work and having a pretty thorough knowledge of the tinner's trade I got along fairly well, managing to save up a few dollars by close application to business and still closer to collections for work done.

Things went well along this line for about two years when for lack of room in my then limited quarters, and what appeared to me then a splendid opportunity to engage in the merchandise business, I bought out a small hardware stock and added it to my shop work, also leased the building for a term of years.

Tinsmith Became Merchant.

At that moment I became a merchant instead of a tradesman in the eyes of the public, and then and there I was expected to conform to the rules of the town and the customs of the other merchants of the town. While I worked at my trade my customers seemed to believe I had need for the money earned and payments came readily, but as a merchant all I needed was to sell them goods on credit, so in my timidity in business decision and lest I should offend some of my customers, I decided to do a little credit business in a very conservative way.

Well, things went about as you would suppose. Before the first year had closed I discovered that in spite of all my conservatism and as I thought shrewd business tact, my books showed more goods scattered out over the country on unlimited time than I had in the store. I realized the situation fully, I saw that a change must be made speedily otherwise there would be a case of "failure of health" and a "splendid business opportunity for sale," so I took counsel with more experienced and older business heads and through their friendly advice and due consideration of the situation myself, on January 1st following, I issued in print in our town paper this proclamation to the public:

A New Year's Resolution.

After due consideration we have decided from this date forward to do a cash business in selling goods. We do not wish to humiliate anyone by refusing them credit, neither do we wish to become embarrassed when our bills become due and we have nothing to pay with. Every favor and accommodation consistent with good business principles will be accorded our customers in buying goods. We do not invite open accounts. By selling for cash we can and will sell cheaper, will have more friends, will be able to promptly meet our obligations, to present no duns and to do more business. Shopwork same terms as heretofore.

(Signed.) E. Thurston.

Such was the determined step that we took several years ago and such is our policy to-day, and proud we are that we have departed from that annoying and vexatious credit plan, and that we have placed our business on as near a strictly cash basis as it is possible to do so in a business with its varied make up such as we have done.

In our shopwork we have never attempted to do a spot cash business as the very nature of it would not permit us to do so. It would be disastrous to any shop that depends on public patronage, and quite a hardship on the patrons to demand of them a cash settlement the moment the work was done. This would be utterly impractical for often in case of a breakdown repairs must be made at once, regardless of cost or terms.

We have in connection with the store both a harness and tinshop. Now some may conclude this method of conducting shopwork in connection with store would tend to depreciate the cash status of the store, but not so. It works the other way, the rigid policy of the store tends to draw the shop to its high level.

A Man with a Principle.

Perhaps you would like to know what we did about those customers who said they "would not spend their money where they could not get credit." Well we let them go their way, refusing to discuss our method with them in open conversation, but fighting our battle unceasingly through the town paper, and in most cases they came back and traded with us and really admired our pluck. The world admires a man for having a principle and sticking to it.

With a great many our plan of doing business served as an advertiser as it singled us out as distinct from the other merchants of the town. We have long since found that no one man can sell all the goods of the town nor can he sell to everybody. It is our opinion, based largely on the last few years' experience and close observation, that the time is ripe for radical changes in methods of doing business. Credit is an old fogy and will prove disastrous sooner or later to the advocate of it. The catalogue house gets the cash anywhere from a week to months before the goods appear. Surely we can demand it when the goods are delivered to our customers. The poor merchant has permitted himself to be made a pack horse until everyone feels that he is invited to ride because he goes easy.

Telephone Calls.

Now as to the price question on goods sold under the cash plan of doing business: Well, we have leaders, as we have always had, with very close prices, usually on staple articles, but the great bulk of hardware goods can be pushed on quality to a better advantage than on price. When we changed from credit to cash we made a slight change in price but rather defended our position on the theory that the goods were the equivalent of the money and that we were justly entitled to the money for our goods.

We keep no customers' books—only a little memorandum book in which we note goods sent out in response to telephone orders or otherwise. These are usually settled in a day or two. If the goods are not settled for promptly and the party does not treat the transaction as a favor shown him, his call is passed by next time.

This we believe to be as near a practical cash business as it is possible to do under the existing surroundings. We live up to our motto in dealing with our customers. We pay them cash on the spot, rarely giving cheques, only for large sums, thus forging our way by example as well as precept.

A Pertinent Question

It has frequently been stated that in order to make it possible to do business on a cash basis it is necessary for all the dealers in a town to agree to do away with the credit system at once. This week we publish the experience of a retail hardwareman who had the nerve to stand on his own shoe leather and who made a success of the cash system in spite of the opposition of dealers who continued to give credit.

In the Western Provinces where the transportation problem makes it hard for farmers to get cash for their grain without selling at low prices it is said that the "Cash System" cannot be adopted. We know, however, of several dealers in the West who have successfully changed their store policy. Why should farmers hold their grain for months and make big money while at the same time borrowing money in the form of goods from the merchant, who in many cases does not even charge interest? Too many farmers leave money in the bank drawing interest while at the same time running long accounts at the hardware stores. If the merchant loses it is largely his own fault.

The editor of Hardware and Metal wants to hear from the hardware dealers in Canada who have been progressive enough to put their business on a cash basis. It is hoped that some helpful suggestions can be given if a list of "We Sell for Cash Only" hardwaremen is compiled. Travellers and merchants are, therefore, requested to forward the names of dealers who do not give credit.

Catalogue Houses.

The effect of the catalogue house is still felt on our trade to some degree, but they are doing less business here now than a few years ago. In most realized that they did not get any barcases persons buying from them have gains over what they could get at home. Many delayed and badly damaged shipments from the catalogue house in the past has proved a damper to their patronage here. Occasionally we are called upon to meet the price on some particular article, which we can usually do to the satisfaction of our customers, but withal the catalogue house business seems to be on the wane in this locality.

Our local town paper made a vigorous fight in a high handed style against the "sending off" way of buying and for the trading at home idea, and it certainly has had its effect. I find my customers quite liberal with the question; ninety-nine per cent. prefer to buy at home if they can do as well, and ninety-five per cent. of my customers will buy at home with slight odds in price against them.

Quality vs. Price.

While salesmanship ranks first as a necessary adjunct in marketing goods, a large assortment well displayed, prompt service honestly rendered adds greatly to any business. A few very cheap and inferior staple articles of merchandise on hand we have found to be an advantage. We use these cheap articles as stool pigeons to induce the purchase of a better grade of goods which in the majority of cases works out all right, but when the price is the main item of consideration we can then meet any price named, holding the trade of the customer and proving to him by the goods that the cheap articles are dear at any price.

We sell cheap goods only when we have to and not because we want to, for it is a settled fact that a better and a far more satisfactory business can be built up on a first-class high grade of goods than on a cheap spurious line.

Thorough mastership of a business comes through a concentration of forces which fully qualifies one for the work at hand. No one can be too thorough in the knowledge of the goods that he offers for sale. President Bush of the National Retail Hardware Association struck the nail on the head when he stated that manufacturers should be more explicit in the description of their wares which they place on the market through the regular course of merchandising. Our stores throughout the country, and especially the country stores, are too much operated by clerks and order takers instead of qualified salesmen.

Credit Drives off Customers.

In concluding this article I will say if any of my fellow hardwaremen are contemplating changing from credit to cash they should decide first that it is the right thing to do, and once decided gather up all your nerve and will power and go into it for dear life, for it is no harder to say no to a friend than to say, pay me and not get it. Later see him going to your competitors to avoid you after you feel that you befriended him by letting him walk off with your goods. It is our honest opinion, based on years of experience and observation, that credit will drive away more good customers from a place of business than it will bring in or hold. Of course the dead beat is not expected to come back to a store to trade after he is fully "loaded," neither will your best friends stick to you sometimes if they owe you an obligation that they cannot meet. Credit is dangerous as it frequently places a merchant where he can neither go ahead nor get out of business. Have you ever seen such cases?

The great catalogue houses have cut the cash plan pattern for us large and clear, and they are doing everything possible to sustain this pattern before the buying public. Can we not come in for some of the good that is mixed with the evil that flows from the great catalogue house fountain? Shall we have more cash houses and less "failing health?"

THE SIEGE OF BATTLEBURG.

For many years the peaceful little town of Battleburg had lain in its pretty valley among the mountains overlooked apparently by the Scouts of The Catalogue House Army. Its inhabitants were happy and contented and the goods they bought from the old veteran general merchant filled their every want.

The General had worked up a good business and won the esteem of the people, but he scented trouble from afar and knew that sooner or later the enemy would appear and bombard the town with tons upon tons of large paper shells called catalogues, the ammunition used by the Catalogue House Army in its new "Hot Air Battery," a recent invention of one of its clever and efficient officers.

He, therefore, like a good general, worked out his plan of campaign, posted his sentries and sat down to await the coming of the enemy.

The enemy came, and came with a rush that nearly put the general out of business, old campaigner that he was.

He soon recovered himself, however, and got down to business. He secured one of their shells, or catalogues, looked it over long and carefully, then sent for one of his aids, Captain Dimes, a young but efficient officer.

The interview lasted some time before the captain emerged and proceeded at once to his quarters at the Battleburg Bulletin, the flourishing daily paper of the town.

That evening the columns of the Bulletin contained an appeal from General Merchant to the citizens to rally around him and offering them as good terms as the enemy.

The population laughed; they were being treated very well, they thought, by the enemy. He was making them fine promises and showing them pictures of the beautiful articles he was going to sell them for half the price the General would charge, and they thought they couldn't do better than stick to him.

The Weapons That Won.

The old General didn't despair, but kept right on with his campaign. Every night he attacked the enemy through the columns of the Bulletin. He showed up all his schemes, invited the public to call at his (the General's) store and see the kind of goods the catalogue houses would send them, and ended up by offering to duplicate any article shown in the catalogue at the same price, plus expressage or freight.

Thus the fight went on with the advantage on the side of the Catalogue Houses, until the unfaithful ones who had been the first deserters began to receive their shipments.

Then came the General's opportunity. He explained how the great Catalogue Houses, by illustrations, clever descriptions and low prices induced the country people to send away their hard earned money for goods they hadn't even seen. He explained how these concerns had such an enormous line of customers all over the country that a few dissatisfied ones here and there made no material difference. If the goods were not satisfactory, who was going to lose sleep over it? Surely not the manager of the Catalogue House, it was the money they were after, and as they got that before the customer saw the goods, the deal, so far as they were concerned, was closed.

He showed them by actual comparison that the goods they received from the Catalogue House were inferior to what he had been selling them all along, but told them if that was the quality of goods they wanted he would cheerfully supply them at Catalogue House terms.

It was a long, hard fight, and the General went to bed tired every night, but he stuck to it, and soon his heart was gladdened by the sight of his old customers coming back faster and faster and many new ones besides. — Westmount, in Iron Age.

METAL AND HARDWARE MEN DINE.

The annual dinner of the metal and hardware section of the Montreal Board of Trade was held at the Canada Club, Montreal, on the 17th inst., when about 40 members of this branch of manufacture sat down to a most sumptuous repast.

Among the guests were: James Davidson, Geo. Caverhill, A. E. Hanna, C. F. Hibbert, H. Walter Dorken, George Boyd, W. H. Farrell, C. M. Strange, A. H. Campbell, C. H. Godfrey, J. R. Kinghorn, R. Starke, Geo. A. Childs, A. Jeannotte, F. C. Lariviere, Geo R. Muirhead, G. C. Seybold, J. B. Peck, J. A. Fuller, W. Hudson, T. H. Jordan, T. P. Howard, A. Clift, T. Hutchison, C. B. Rittenhouse, E. G. Jackson, A. Gordon McPherson, Wilfrid Lauriault and others.

A POPULAR CALENDAR.

Many requests have been made for the finely lithographed calendar of the Capewell Horse Nail Co. which represents the advantage of the horse and buggy over the automobile from the girls' point of view. The company have still some copies of this calendar left, and they have offered to mail a copy to any reader of Hardware and Metal.

ALLEGED HOSTILITY TO U.S. MAGAZINES.

For some time past enquiries have been received from United States manufacturers and others regarding our position on the question of an alleged movement in Canada to keep out United States magazines. Regarding this we wish to state very emphatically that there is no such organized movement and any action that has been taken has not originated with publishers in Canada. Regarding our own position in the matter we are very much opposed to any movement reacting against the best publications in the United States, believing that Canadians should have the most liberal access to the best reading possible. A portion of a letter written by Col. J. B. MacLean, president of the MacLean Publishing Co., publishers of Hardware and Metal, who is himself a member of the executive of the Canadian Manufacturers' Association, to Mr. J. P. Murray, chairman of the Commercial Intelligence Committee of the C.M.A., will show the stand he takes in the matter.

"There is a matter which I think might be brought before the Commercial Intelligence Committee. The Canadian Government propose shutting out U.S. publications, trade newspapers, magazines and that sort of thing. I would probably benefit by such a policy more than anyone else in the country, owning as I do so many newspapers, but I think it is a very short-sighted policy on the part of the Government. By all means let them shut out the cheap and useless magazines, but I think it is to the advantage of our people, particularly of our business men, manufacturers, and their employes, to read the best that is published in the United States and Great Britain that they may be kept right up to the times in every particular in every department of manufacturing and selling of goods. We are doing a lot in this way in our own papers, but we cannot cover all the fields and we never hesitate to recommend or advise any of our readers anywhere in Canada to subscribe for and read the best publications in the United States.

"I think this is a matter the association should deal with and point out to the Government the inadvisability of such a course."

Considerable activity has been noticeable of late in the Post Office Department of both the United States and Canada, which has led up to the present condition of affairs. The most important move has been the abrogation by Canada of the post convention between the United States and Canada in so far as that convention relates to second-class matter. This will take effect next Spring. The original instrument was ratified in 1888, but it was amended two years ago so as to provide "for the right of each administration to decline to transmit through its mails, except when duly prepaid by stamps affixed in the country of origin at the rate applicable to miscellaneous printed matter, such newspapers and periodocals as it would decline to transmit through its mails under the statutory newspaper and periodical privileges accorded to publishers and newsdealers, if such newspapers and periodicals were published in its own country."

In abrogating the convention, Canada notifies the United States that, if by legislation new regulations are framed controlling the second-class matter in the United States, it will be prepared to enter upon negotiations for another convention relating to this class of matter.

Thus it will be seen that Canada is still ready to make another treaty as soon as the United States Government, by legislation, frames new regulations controlling second-class matter. It is over this point that the whole difficulty has apparently arisen, giving effect that Canada is antagonistic to United States publications. She is merely waiting until the United States Government frames new laws in this matter, at which time there is not the shadow of a doubt but that a suitable treaty will be made permitting of the entrance into Canada of reputable United States magazines on the same terms as they are received through the mails of the United States.

More than this, we have reason to believe on the authority of an official of the Canadian Post Office Department that it was on the suggestion of a high official in the U.S. Post Office Department at Washington that the Canadian Government has taken the action referred to above. This was evidently done to assist the U.S. authorities in some scheme which has not yet been made public.

RETAINING EXPERIENCED HELP.

In small towns the general idea among male clerks is that when they have received a certain amount of experience they will go away in search of larger opportunities. This applies to almost every line of business. They leave just at the time when they are most valuable to the merchant with whom their apprenticeship has been served and very often their places have to be filled by the promotion of less competent men. So numbers of small stores go on year after year acting as training schools for salesmen, and continually changing the personnel of their staffs.

Such was the case, up till a couple of years ago, in a store located in a town of about two thousand population. It had two competitors, who had always claimed the larger share of the business, although the store in question was going ahead splendidly. Besides the two members of the firm three salesmen were employed, and at the time we speak of they had resolved to seek a larger field for their efforts. Instead, however, of allowing them to go, the firm organized a joint stock company and took them into the business. All three remained and worked with an energy that has brought big results.

Ask a resident of the town which store appears to be doing the most prosperous trade and he is more than likely to mention this one. He may also comment on the excellence of the service which it gives. We were able to detect no peculiar circumstances that would contribute to the company's success; it seemed due entirely to the fact that all members of the staff were enthusiastic in endeavoring to bring it to the fore. Other merchants may abstract from this a solution of the problem of retaining experienced help.

SHORTAGE IN WHITE LEAD.

There is a shortage of white lead, owing to most firms depending on heavy supplies from the local white lead corroding firm, which has been forced to close down for a couple of months ow-

ing to its inability to procure enough raw material.

This company, being in fact the only producers of dry white lead in Canada at present, the lead grinders were somewhat chary in importing too much dry white lead last fall, especially in view of the high figures which prevailed at the corroding plants in the Old Country.

Now, we understand, the Canadian firm which converts the lead from pig into the dry, or powdered form, have had to close down for a couple of months in mid-winter. Consequently, they have not been able to turn out dry white lead, and the result, as is naturally to be expected, creates a shortage which is difficult to overcome, during the close of navigation to Montreal and interior points.

SENSIBLE TALK.

It is seldom that a manufacturer comes out in opposition to the protectionist policy, but R. T. Crane, of Chicago, takes this unusual position in a recent article, discussing U.S. Senator J. J. Hill's recent plea for reciprocity in Canada. Mr. Crane is probably the largest manufacturer of valves and heating supplies in America, one of his company's many warehouses being located in Winnipeg.

Mr. Crane cantends that "a large amount of trade with the Canadians has already been lost, and that much more is likely to be lost, by the stupid and short-sighted policy of our Congress in making the Dingley tariff law a bar to reciprocal trade relations, not only with Canada, but with every other foreign country. We deliberately took a course opposed to reciprocity at a time when Canada appeared to be entirely satisfied with its trade relations with this country, and thus lost the enormous advantage we then possessed, and it is now too late for us to try to re-establish our former position, much less to take advantage of the greatly improved conditions in the Dominion. In this case we have antagonized a neighbor that, by its geographical situation, ought to have been one country with the United States. There is no more sense in putting up trade barriers bebetween Canada and this country than there would be in putting them up between Illinois and Indiana. Once we had committed ourselves to the Dingley tariff, we antagonized the Canadians, and they then swung sharply toward a fiscal policy of protection. This policy is now thoroughly and generally approved, and there is no prospect that the Canadians will change it."

Continuing, Mr. Crane points out that to change Canada's fiscal policy would be unfair to both Canadian manufacturers and to Americans, who have established factories in Canada, with the expectation that the policy would be permanent. He further argues that the high protective policy in the States is forcing manufacturers there to pay high prices for raw materials, this increase in manufacturing costs placing American goods at a disadvantage in foreign markets.

MERCHANTS AND TRAVELERS.

The travelling representative of the manufacturer and jobber is ubiquitous, and sometimes he claims that his reception by merchants is not as cordial as it should be. The merchant in defence says that he would be able to do very little else if he gave any time to every commercial man who called upon him. He recognizes thoroughly the value of examining as many samples as possible, for the purpose of comparing prices and qualities, but is forced to draw the line somewhere.

There is one type of drummer who not only does a great deal of harm to himself, but excites a prejudice against his fellows. He's the man who is persistent in the wrong place. A good illustration of this point was given by a merchant who called upon the editor a few days ago. He was writing out an order in his private office, and had only about five minutes to catch the mail, when the door opened and in walked a commercial man, without even knocking. He was told that it would be impossible to talk to him just then, but he persisted. Very much annoyed, the merchant took him by the shoulders and pushed him outside. Fortunately there are few men of this class on the road.

On the other hand, there are times when travelers have a right to expect a little more consideration than they get. We met the representative of a Toronto house in an Ontario city one day, where he had gone in response to a special request from one of the merchants. This was the only call that he had to make there, and he naturally expected to get through in the morning, so that he could leave on the first afternoon train. He arrived about 9 a.m., and it was about 4 p.m. before he was given an opportunity to show his samples. Now we have reason to know that the merchant was not busy in the meantime. His reason for acting as he did we do not know, but, thoughtless or otherwise, he wasted a half day of the traveler's valuable time.

SHORTAGE OF CARS.

The Great West has been hit hard during the past few months, first by the shortage of cars to move the big crop garnered by the farmers, and second by the shortage of coal, exceptionally cold Winter, bad railway service and, in some cases, actual shortage of provisions. But despite these drawbacks it would be hard to find anyone who has any kick to register about the country, much though they criticize the railways and other institutions.

One protest has, however, been registered by the Gazette, of Francis, Sask., which through the courtesy of one of our subscribers, reproduced, in its issue of Jan. 1 last, our recent editorial on "Returned Drafts." The Gazette says western retailers fully appreciate the advantage of taking every discount possible and making every saving on interest. It says further :

"Retailers are practically at the mercy of the wholesalers at the present moment owing to shortage of cars. No wheat is being moved from the west, the elevators are full, barns of every description are full, and grain is even lying on the ground. When the farmer has no money to pay his bills, how can the wholesaler expect the retailer to pay his, much as he would like to get that discount !"

The point of our recent criticism was that retailers should hesitate before returning drafts for trivial causes. "Shortage of cars," however, is not a trivial cause and we entirely agree with the Gazette that the influence of every branch of trade ought to be used to induce the railroads to supply the necessary number of cars to move the big crops of the west upon the turning into cash of which so much depends.

THE BLACK LIST.

The merchants in some towns throughout Ontario have taken steps to round up the "dead beats" and force them to cast off their practice of "doing" and accept an honest way of living or go wanting. (This is a good time of the year to put this rule into force).

Every business man has his troubles and losses with this class of people who are cunning in their way. For the first few weeks the bills are paid. Next a dollar or two is carried over and then, like a cloud-burst, the orders come in until a bill of $30 or $40 is on the book, when they suddenly disappear and start a new cash account at another store.

To try and collect the debt is a waste of time, although the cases are nothing less than theft.

In various towns the mercantile men have joined hands, each handing in his list of "dead beats," and under the heading of "Black List" are hung in the windows announcing that those whose names appear on the card will be refused credit.

In the past the Government law somewhat protected the dead beats, but it is understood that at the next sitting of the Legislature a change will be made, giving magistrates a limited power to deal with cases of this kind.

Markets and Market Notes

(For detailed prices see Current Market Quotations, page 66.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Ingot Copper—Advanced cent.
Galvanized Iron—One line shows advance.
Old Material—Several lines show slight advances.
Paris Green—Advanced one cent per pound.
Turpentine—Advance of one cent per gallon.
Copper Rivets and Burrs—Advanced.
Shovels and Scoops—Advanced $1 per dozen (list.)

TORONTO.

Paris Green—One cent per lb. advance.
Copper Rivets and Burrs—Ten per cent. advance.
Old Material—Lead and rubber higher.

Montreal Hardware Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, Jan. 25, 1907.

Business in hardware circles this week is reported excellent. In fact, most jobbers say that they don't know which way to turn. The goods are going out faster than they are coming in, and one firm has such a floor full of shelf goods laid out (all big orders) that it's almost impossible to get around them.

Many lines are beginning to run short, and unless some relief comes, there are likely to be quite a number of advances in the near future.

Screen doors and many other spring lines are to be seen among stocks.

Copper rivets have again advanced, the new discount being 15 per cent.

All shovels and scoops advanced $1.00 per doz. (list).

Machine screws are also among the week's advances, the new list being 70 per cent.

AXES — A slight increase in the sales is reported over last week. We quote: $7.60 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

LANTERNS. — Our prices are: "Prism" globes, $1.20; Cold blast, $6.50; No. 0, Safety, $4.00.

COW TIES AND STALL FIXTURES —We still quote; Cow ties, discount 40 per cent. off list; stall fixtures, discount 35 per cent. off list.

SLEIGH BELLS—Moving, but very slowly. Our prices remain: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50; pear shape, $1.15 to $2; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

RIVETS AND BURRS — Copper rivets and burrs advanced. New discount 15 per cent. Our prices now are: Best iron rivets, section carriage, and wagon box black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 25 per cent. off, and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 15 per cent., subject to usual charge for half-pound boxes.

HAY WIRE.—Prices remain firm. Our quotations are: No. 13, $2.55; No. 14, $2.65; No. 15, $2.80; f.o.b. Montreal.

MACHINE SCREWS — Still scarce, with no prospects of a near relief. We quote: Flat head, iron, 35 per cent., flat head brass, 35 per cent., Felisterhead, iron, 30 per cent.. Felisterhead, brass, 25 per cent.

BOLTS AND NUTS—Scarce, discounts remain: Carriage bolts, 3 and under, 60 and 10; 7-16 and larger, 55 per cent.; fancy carriage bolts, 50 per cent.; sleigh shoe bolts, ⅝ and under, 60 per cent.; 7-16 and over, 50 per cent.; machine bolts, ⅝ and under, 60 per cent.; 7-16 and larger, 55 per cent.

HORSE NAILS—Fair demand. Discounts remain as follows: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.

WIRE NAILS—No change from last week's advance. We still quote: $2.40 per keg base f.o.b. Montreal.

CUT NAILS—We continue to quote: $2.50 per 100 lbs.; M.R.M. Co., latest, $2.30 per keg base, f.o.b. Montreal.

HORSESHOES. — Our prices are: P.B. new pattern, base price, improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 lbs. More than three sizes, 25c. per 100 lbs. extra.

BUILDING PAPER—New lists show advances.

CEMENT AND FIREBRICK.—No change in prices. We are still quoting: "Lehigh" Portland in wood, $2.54, in cotton sacks, $2.39; in paper sacks, $2.31. Lefarge (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American $30 to $35; White Bros.' English cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—Our quotations remain: 5-16 inch, $4.40; 3-8 inch, $3.90; 7-16 inch, $3.70; 1-2 inch, $3.50; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.20; 7-8 inch, $3.10; 1 inch, $3.10.

SHOT—Our prices remain as follows: Shot packed in 25-lb. bags, ordinary drop AAA to dust, $7 per 100 lbs.; chilled, No. 1—10, $7.50 per 100 lbs.; brick and seal, $8 per 100 lbs.; ball, $8.50 per 100 lbs. Net list. Bags less than 25 lbs., ½c. per lb. extra, net; f.o.b. Montreal, Toronto, Hamilton, London, St. John, Halifax.

AMMUNITION — Slow. Very little sold. Our prices remain: Loaded with black powder, 12 and 16 gauge, per 1,000, $15; 10 gauge, per 1,000, $18; loaded with smokeless powder, 12 and 16 gauge, per 1,000, $20.50; 10 gauge, $23.50.

GREEN WIRE CLOTH.—We continue to quote: In 100 foot rolls, $1.62½ per hundred square feet, in 50 feet rolls, $1.67½ per hundred square feet.

Toronto Hardware Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Jan. 24, 1907.

Hardware jobbers report business very brisk with very few advancers quoted this week. Travellers all report business very brisk with exceptionally large orders for spring. At present some are selling lines of lawn mowers, hose, etc., which are generally meeting with good demand although the bulk of the trade placed their orders in the fall.

Copper rivets with usual proportion copper burrs, that is to say, weight of copper burrs not exceeding ⅓ of combines weight of copper rivets and copper burrs, have advanced 10 per cent. and are now quoted at 15 per cent. Copper burrs in excess of ⅓ of combined weight of copper rivets net list, also copper burrs net list. A large amount of copper has been used of late for street railways, and other electrical enterprises, and the price has rapidly advanced.

No further advance is quoted on nails and they still remain at $2.35 base, but another advance is looked for in a short time. The advance on wood screws has failed to materialize, the manufacturers claiming that stocks are rapidly rounding into shape. Were the expected advance a large one shipments from the States would be encouraged.

AXES AND HANDLES—The numerous new lines of axe handles which have been placed on the market are rapidly being sold with large orders for fall shipment.

GARDEN TOOLS—Small book orders for these articles continue to be received.

WASHING MACHINES—At present these goods are very prominent with large orders The majority of merchants are placing these goods in conspicious positions for an early sale.

SPORTING GOODS — Skates are again in great demand and the increased fall of snow throughout the country will help the sale of snow shoes. Trap shooting is becoming very popular throughout the country, and will greatly increase the sale of ammunition.

CHAIN—Remains at our former quotations : ⅝ in., $3.50 ; 9-16 in., $3.55 ; ½ in., $3.60; 7-16 in., $3.85; 3-8 in., $4.10; 5-16 in. $4.70; 1-4 in. $5.10.

RIVETS AND BURRS—An advance of 10 per cent. has been made on these articles, and are now quoted at 15 per cent. on copper rivets and burrs. All burrs in excess of ⅓ weight of rivets are net list.

SCREWS—The expected advance has not materialized and it does not look as though prices will be changed for the present although raw material has gone up.

BOLTS AND NUTS—The scarcity on these articles continues with large orders continually being received.

TOOLS—The various advances on tools do not tend to diminish the sale, as large orders are taken for spring shipments.

SHOVELS—Snow-shovels are again in great demand and very few will be carried over the season.

LANTERNS—The lantern demand is very quiet at present, all merchants apparently having large stocks on hand.

EXTENSION AND STEP LADDERS—Price remains the same as quoted last week, 11 cents per foot for 3 to 6 feet, and 12 cents per foot for 7 to 10-foot ladders. Waggoner extension ladders 40 per cent.

POULTRY NETTING—We quote, 2 inch mesh, 19 w.g., discount 50 and 10 per cent, all others 50 per cent.

WIRE FENCING—Galvanized and plain wire remain at advanced prices, but continue selling well.

OILED AND ANNEALED WIRE—(Canadian)—Gauge 10, $2.41 ; gauge 11, $2.47 ; gauge 12, $2.55, per 100 lbs.

WIRE NAILS—Remain firm at last week's quotation of $2.35 base, with a probable further advance in the near future.

CUT NAILS—We quote $2.30 base f.o.b. Montreal , Toronto, 20c. higher.

HORSENAILS—Capewell brand, list per pound, No. 5, 15cts; No. 6, 14cts; Nos. 7 and 8, 13cts; No. 9 to 12, 12cts; f.o.b. Toronto and Winnipeg, discounts on application. "C" brand, 40, 10 and 7½ off list. "M.R.M." brand, 60 per cent. off.

HORSESHOES—Our quotations continue as follows : P.B. base, $3.65 ; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80 ; No. 1 and smaller, $4.05 ; snow, No. 2 and larger, $4.05 ; No. 1 and smaller, $4.30 ; light steel shoes, No. 2 and larger, $4.15 ; No. 1 and smaller, $4.40 ; featherweight, all sizes, 0 to 4, $5.75 ; toeweight, all sizes 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per 100 lbs. extra ; more than three sizes in a keg, 25c. per 100 lbs. extra.

BUILDING PAPER—Orders are still coming in briskly, the advanced price not affecting the ordering to any extent.

CEMENT—We quote : For carload orders, f.o.b. Toronto, Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Portland, $2.05 upwards.

FIREBRICK—English and Scotch fire brick $27 to $30 ; American low-grade, $23 to $25 ; high-grade, $27.50 to $35.

HIDES, WOOL, FURS—The market is steady with a slight decline in country hides to allow for lack of quality.

Montreal Metal Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, January 25, 1907

The markets this week show several advances, among which ingot copper again has a place, being extremely short just at present, with not much offering.

Tin is firming up again and will advance if the market goes any higher, which it will very likely do next week.

Zinc spelter remains firm, with no changes at present. The same refers to lead and antimony.

Galvanized iron shows an advance.

A fine business is being done in old material, and our prices this week show quite a few advances.

Structural iron and steel is somewhat scarce; the big mills in the States are running full capacity, and promising deliveries in from three to six months; therefore, nearly all large buildings in course of construction are likely to be held up more or less, and contractors should look well ahead for their requirements.

COPPER — Extremely scarce, with very little appearing. Ingot copper shows an advance of half a cent over last week's figures. Our prices now are: Ingot copper, 26½ to 27 cts.; sheet copper, base sizes, 34 cts.

INGOT TIN—Firming up again and expected to advance shortly. We still quote: 45½ to 46c. per pound.

ZINC SPELTER—Prices have not yet advanced. We are still quoting: $7.50 to $7.75 per 100 lbs.

PIG LEAD—Very firm. Our prices remain: $5.50 to $5.60 per 100 lbs.

ANTIMONY—No change over last week's prices, we still quote: 27½ to 28 cts. per pound.

PIG IRON—Very hard to get at present, with prospects of remaining so for some time. We are quoting: Londonderry, $24.50; Carron, No. 1, $24.50; Carron, special, $23.50; Summerlee, No. 2 selected, $25.00 ; Summerlee, No. 3 soft, $23.50.

BOILER TUBES—Very firm. We quote: 1½ to 2 in., $9.50; 2¼ in., $10.35; 2½ in., $11.50; 3 in., $13.00; 3½ in., $17.00; 4 in. $21.50; 5 in., $45.00.

TOOL STEEL — Our prices remain: Colonial Black Diamond, 8c to 9c; Sanderson's 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Hardening," 65c. per pound; Conqueror, 7½c.; Conqueror high speed steel, 60c.; Jowitt's Diamond, J., 6¼c. to 7c.; Jowitt's best, 11c. to 11½c.

MERCHANT STEEL.—Our prices are as follows: Sleigh shoe, $2.25; tire, $2.40, spring, $2.75; toecalk, $3.05; machinery iron finish, $2.40; reeled machinery steel, $2.75; mild, $2.25 base and upwards; square harrow teeth $2.40; band steel, $2.45 base. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING—Present prices are: 3-16 inch to ¼ inch, $7.25; 5-16 inch to 11-32 inch, $6.20; ⅜ inch to 17-32 inch, $5.15; 9-16 inch to 47-64 inch, $4.45; ¾ inch to 17-16 inch, $4.10; 1½ inch to 3 inch, $3.75; 3⅛ to 3 7-16 inch, $3.92; 3½ inch to 3 15-16 inch, $4.10; 4 inch to 4 7-16 inch, $4.45; 4½ inch to 4 15-16 inch, $4.80. This is equivalent to 30 per cent. off list.

GALVANIZED IRON — One line shows an advance of 10 cents (Gorbal's "Best Best" 28 gauge, now selling at $4.55). We now quote: Queen's Head, 28 gauge, $4.60 to $4.85;

26 gauge, $4.45; 22 to 24 gauge, $3.90; 16 to 20 gauge, $3.75; Apollo, 28 gauge, $4.45 to $4.70; 26 gauge, $4.30; 22 and 24 gauge, $3.75; 16 and 20 gauge, $3.60; Comet, 28 gauge, $4.45 to $4.70; 26 gauge, $4.30 to $4.45; 22 and 24 gauge, $3.75 to $4.00; $16 to 20 gauge, $3.60 to $3.85; Fleur-de-Lis, 28 gauge, $4.45 to $4.70; 26 gauge, $4.30; 22 and 24 gauge, $3.75; 16 to 20 gauge, $3.60; Gorbals "Best Best," 28 gauge, $4.55; Colborne Crown, 28 gauge, $4.45; 26 gauge, $4.30; 24 gauge, $3.75. In less than case lots, 25c extra.

OLD MATERIAL — Several lines show slight advances. Our prices are: Heavy copper, 20c per lb.; light copper, 17c per lb.; heavy red brass, 17c per lb.; heavy yellow brass, 14c per lb.; light brass, 10 to 10½c per lb.; tea lead, 4½c per lb.; heavy lead, 4½c. per lb.; scrap zinc, 4½c. per lb.; No. 1 wrought $17.00 per ton; No. 2 wrought $6.00 per ton; No. 1 machinery, $18.00 per ton; stove plate, $13.00 per ton; old rubber, 10½ cents per lb.; mixed rags, 1 to 1½c per lb.

Toronto Metal Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Jan. 25, 1907

While prices on all basic metals are the same as a week ago, conditions have strengthened somewhat, and ingot tin is gaining in strength. Copper continues the great feature, its great firmness and scarcity being considered entirely free from speculative dealings by close followers of the market. Lead is increasing in activity and scarcity, and higher prices will probably result. In old materials tea lead and old rubbers have shown advances and in coal easier conditions are reported with revised quotations.

Business is being transacted in large volume, the movement of stocks being much greater than usual at this season. The high prices increase the totals very materially, as with the same tonnage of metals the cash receipts will show totals fully double those of a year or so ago. The difficulty in securing stocks in large quantities also makes necessary the placing of more orders, this aiding in making business more lively.

Manufacturers who use tubes and bars still experience difficulty in securing shipments of supplies, and screws, wire nails and similar goods continue scarce as a result.

PIG IRON — Prices hold very stiff, but there is not much activity at this season. Hamilton, Midland and Londonderry are off the market, and Radnor is quoted at $33 at furnace. Middlesborough is quoted at $24.50, and Summerlee, at $26 f.o.b., Toronto.

BAR IRON—Quotations remain as before with a fair trade being done. We quote: $2.30 f.o.b. Toronto, with 2 per cent. discount.

INGOT TIN — Speculation has strengthened the market, but we are still quoting 45 to 46 cents a pound.

TIN PLATES—Orders for future delivery are still being placed but most dealers have bought. Prices are firm.

SHEETS AND PLATES—Active buying is reported with prices steady. Stocks are light and prices advancing.

BRASS—Along with copper this metal holds a very firm position. We quote 30 cents per pound.

COPPER — Stocks are very low and still prices are very stiff. We still quote: Ingot copper $26 per 100 lbs., and sheet copper $31 to $32 per 100 lbs.

LEAD — Material is scarce with a very active demand from buyers who are short. Prices keep very firm. We quote: $5.40 for imported pig and $5.75 to $6.00 for bar lead.

ZINC SPELTER—Stocks continue light with the market active. We quote 7½c. per lb. for foreign and 7c. per lb. for domestic. Sheet zinc is quoted at 8 1-4c. in casks, and 8 1-2c. in part casks.

BOILER PLATES AND TUBES—We quote: Plates, per 100 lbs., ¼ in. to ½ in., $2.50; ⅝ in., $2.35 heads, per 100 lbs., $2.75; tank plates, 3-16 in., $2.65; tubes, per 100 feet, 1½ in., $8.50; 2, $9; 2 1-2, $11.30; 3, $12.50; 3 1-2, $16; 4, $20.00. Terms, 2 per cent. off.

ANTIMONY—Stocks are in fair condition with prices unchanged at 27c. per pound.

OLD MATERIAL—Dealers report a good demand with supplies coming in well. Their buying prices are: Heavy copper and wire, 20 cents per lb.; light copper, 17½c. per lb.; heavy red brass, 17½c. per lb.; heavy yellow brass, 15c. per lb.; light brass, 11c. per lb.; tea lead, $4.00 per 100 lbs.; heavy lead, $4.25 per 100 lbs.; scrap zinc, 4½c. per lb.; No. 1 wrought iron, $15; No. 2 wrought, $8; machinery cast scrap, $17 to $18; stove plate, $14; malleable and steel, $9; old rubbers, 10½c. per pound; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—Stocks are in good shape, with the scarcity of slack being relieved. We quote:

Standard Hocking soft coal f.o.b. at mines, lump $1.50, ¾ inch, $1.40; run of mine, $1.30; nut, $1.25; N. & S., $1; P. & S. 85c.

Youghiogheny soft coal in cars, bonder at bridges: lump, $2.60; ¾ inch, $2.50; mine run, $2.40; slack, $2.15.

United States Metal Markets

From the Iron Age, Jan. 24, 1907.

There is distinct evidence, notably in the New York market, of an eagerness on the part of some sellers of pig iron to secure business for spot and for early delivery, and the market is weaker, with lower prices accepted for what little business there is. Unless weather conditions prove adverse there is the prospect that the famine is over. It appears, too, as though shipments from the Birmingham district are improving, at least to tidewater markets. To points north of the Ohio the floods have checked the movement.

Considerable foreign iron is still coming forward, but so far as we can learn there has been no buying of round lots abroad for some time, and it looks as though the end of the import movement is pretty well in sight.

Buying for delivery during the second half has continued on quite a good scale, particularly in the territory west of the Allegheny Mountains, but a feeling of conservatism is spreading among founders and steel makers who are now partly covered and are inclined to await developments before committing themselves further.

In order to compensate for the high price of spelter the price of galvanized sheets will be advanced 10 cents per 100 lb. by the leading interest. On blue annealed sheets there will be an advance of 5 cents per 100 lb., prices hitherto having been out of harmony with other departments of the sheet trade.

A significant report is that a fair sized business has been done in tin plate for delivery during the third quarter, a premium of 10 cents per box being paid.

From the Iron Trade Review, Jan. 24, 1907.

Pig iron is the absorbing topic, and its steady movement and upward trend are dominating features of the present situation. Transportation facilities have been greatly marred by the storms of the past week, and an unprecedented demand for spot iron is one of the contingencies expected.

Specifications for finished material show no evidence of declining. They are abnormally large for plates, steel bars and sheets, in each of which mills are months behind in deliveries. Structural steel is improving though the increased tonnage is almost wholly from railroads and carbuilders. Building work is seasonably dull, and specifications from contractors naturally are light. There is a good inquiry for light and heavy rails, and a few small sales of the latter to traction enterprises have been made at $30 mill. Scrap continues weak and prices are lower.

Inquiry for cast iron pipe product is heavier than in years. Municipal wants are slow in coming forward, but specifications from gas companies and other private interests are unusually brisk.

The action of the Pennsylvania railroad in organizing a $100,000,000 car trust, following the announcement of a new issue of capital stock and bonds amounting to $200,000,000 has aroused much interest, and is generally accepted as indicating unprecedented expenditures for freight cars. Although $25,000,000 of the trust certificates will be for payment on cars ordered for 1906 and $19,000,000 for cars already ordered for 1907, further heavy ordering at an early date is expected. The principal car interest is now in the market for 30,000 tons of pig iron for the last half of the year and has placed an order for 5,000 tons of shapes, angles and plates.

London, 'Eng., Metal Markets

From Metal Market Report, Jan. 23, 1907.

Cleveland warrants are quoted at 59s. 10½d., and Glasgow Standard warrants at 59s., making price as compared with last week 9d. lower on Cleveland warrants, and 10d. lower on Glasgow Standard warrants.

TIN—Spot tin opened strong at £192 10s., futures at £192 15s., and after sales of 250 tons of spot and 550 tons of futures, closed easy at £192 5s. for spot, £192 10s. for futures, making price compared with last week £3 10s. higher on spot and £2 15s. higher on futures.

COPPER—Spot copper opened strong at £107, futures £108 3s., and after sales of 500 tons of spot and 800 tons of futures, closed easy at £106 15s. for spot, and £108 for futures, making price compared with last week £1 15s. lower on spot and 17s. 6d. lower on futures.

LEAD.—The market closed at £19 15s. making price as compared with last week 2s. 6d. lower.

SPELTER — The market closed at £23 17s. 6d., making price as compared with last week 15s. lower.

London Hardware Trade News

The prominence attained by London last week, when the published clearing house returns showed an increase of 73.4 per cent. over the figures of a year ago, is significant. This increase was by far the largest experienced by any clearing house in Canada, the increase in Vancouver, the second city on the list, being 51.9 per cent. London's merchants and manufacturers are enjoying a vast increase in business.

The past year was marked by rapid advancement in industrial London. A total of $1,250,000 was spent on new buildings, including 300 houses and many factories. The list of new business premises and additions erected during 1906 includes: McClary Manufacturing Co., Trafalgar Street, 100 x 230 feet, five stories high; Wortman & Ward Manufacturing Co., York Street, extension 50 x 100 feet, 2 stories; London Foundry Co., Thames Street, extension 54 x 36 feet, 2 stories; George White & Sons Co., east end warehouse, 240 x 140 feet, 1 storey; Dennis Wire and Iron Co., Dundas Street extension 24 x 45 feet, 1 storey.

The number of hands now employed in London factories is 9,000. The McClary Mfg. Co. employs over 800 people, London Rolling Mills 250, E. Leonard & Sons 200, Labatt Mfg. Co. 175, George White & Sons 160, London Bolt and Hinge Works 100, Wortman & Ward Mfg. Co. 90, and many others in the hardware and metal trade are among the important factories in the city.

There were 1,259 sales of real estate for the year, the consideration being $2,033,485. The assessment of these pcoperties totaled $1,447,822, being but 71 per cent. of the actual value. So the city taxes on a basis of sale value are less than 15 mills on the dollar. Building lots in many sections have more than doubled in value in the past five years in London. The city cannot have a "boom." At least such a thing never seemed within the range of possibilities. But beyond question the city is having an era of prosperity hitherto unprecedented.

Edgar M. Bogart, of Calgary, who has been visiting relatives in London during the past month, left on Jan. 17 for the west. Mr. Bogart has resigned his position as traveler for a western hardware firm, to engage in business with N. McCutcheon, of Toronto. Many friends in this city will wish him every success in his new venture in the west.

N.B. Hardware Trade News

St. John, Jan. 21.

There have been plenty of rumors of late about plans for industrial development in St. John. Some of these reports, in all of which there seems some foundation of truth, have been touched upon in this column in previous issues. One that has excited quite a bit of interest is that to the effect that large car shops are to be established here on a stretch of property along the Marsh Road. Men whose names were associated with the affair were of the stamp of J. A. Likely and T. H. Estabrooks, leading citizens. Now the car shops story is quiescent. In its place, however, has come another report. In this the names of some of the gentlemen said to be connected with the car shop plans are also used. If this latter story be correct there are plans on foot to have a large carriage factory put up on the site above mentioned. There is room for such a plant here, but of course there are many things to be considered in the connection. Definite information is not obtainable, but the rumors may be picked up on the street.

* * *

For the past couple of weeks business has been a trifle on the quiet side with wholesale houses. Preparations for the spring trade have been going on steadily but the actual sales recorded have naturally been comparatively small though for the season of the year they have been satisfactory. It has perhaps been noticeable that while houses dealing in other lines have had or are having "clearing up" sales, the hardware people have not been holding such special sales. One would think that, to a large degree at least, what holds good in other lines would be true of hardware. But steady going, even sales seem to be satisfactory to the hardware houses at this as at other times.

* * *

High prices still reign. The forecasts are: Further advances. Copper is so scarce that quite a number of dealers will not offer quotations at all. Moreover, there is no indication of an easing of market conditions as regards this metal in the near future. Poultry netting generally is higher too than at this time last year. Wire fencing may be referred to in the same way. This is due, of course, largely to the advances in steel rods. Piece tinware, too, has jumped up of late. White lead has become even firmer than formerly and additional advances are expected. As regards cordage, however, there is a different tale to tell. The market is practically paralyzed so far as cordage is concerned. For this the conditions of the new tariff are accountable.

At the annual meeting of the St. John Iron and Hardware Association held recently, it was decided that the association's annual dinner should be held on January 30th

B.C. Hardware Trade News

Vancouver, Jan 19, 1907

From official figures the totals of ore shipments in the Kootenay in 1906 have been compiled. There were in all 1,579 148 tons shipped This was divided approximately as follows:

Boundary shipments, total 1,135,138 tons, including Grandy mines, 801,598, Mother Lode, 101,539, Brooklyn-Stemwinder, 142,625; Sunset, 41,128; Rawhide, 26,646; Emma, 12,662. There were 27 shippers in this district.

Rossland district, 281,711 tons; including, Centre Star, 114,972; Le Roi, 126,252; Le Roi No. 2, 22,166, Smelted, 13,200. Twelve shippers.

Slocan district, 133,299 tons, including, St. Eugene, 26,068; Sullivan, 27,320; Ymir, 12,451; La Plata, 14,630, Eva, 10,311, Queen, 7,401; Hunter V, 4,188; North Star, 3,334. Number of shippers, 125.

* * *

The first shipments of the machinery for the new dredge to be built on False Creek, to be used in Vancouver harbor, have been shipped west. The machinery is all the work of the Polson Iron Works, Toronto, and some unavoidable delays have occurred in making delivery. It was originally intended that the machinery would be here last Fall, so that the new dredge would be at work in the Spring. The cost of the plant complete will be about $100,000. It is of the suction type, long pipes laid on pontoons delivering the mud excavated from the bed of the harbor to any point desired. The whole dredge is being shipped in the knock-down and will be put together here.

* * *

Chandelar, the newest mining camp in the golden north, is the latest discovery of Wada, the hardy little Japanese, who first reported the Tanana country, though his finds in the latter never brought him much direct gain. The little brown man, who is considered one of the hardiest men in the far north, dropped into Dawson four years ago this winter, when the thermometer was 50 below. His tales of the wonderful riches of the Tanana country given with such circumstantial detail and precision, induced a great stampede to the new district, though the weather was cruelly severe at the time. The stampede is still recalled as about the greatest in the history of Dawson. At the time the stampeders were disappointed in not finding Wada's fairy tales verified at once. They were indeed so angry that they first decided to hang the unlucky little Jap, but relented. Later, the finds in the Tanana district more than verified the biggest tales Wada had told, of the wealth of the district. This time the little Jap is reaping the reward by getting big results for himself from his claim which is one of the richest in the Chandelar field.

PUBLICATION DELAYED.

Owing to the storms of the past week many trains have been delayed and considerable matter for publication has necessarily been crowded out. We trust, therefore, that our subscribers will understand the difficulties of publication under the circumstances and will know why the paper is delayed if it is not received at the usual time.

There is Twenty Years of Experience in this Can

Doesn't this point the way for you? Stephen's Pure Paint has now a proven record of over twenty years' hard use, under many difficult conditions.

Every gallon is made with Manitoba Linseed Oil—properly aged—this increases not only the body, but also the wearing qualities of the paint.

SUPERB EMPIRE

The Perfect Cooker

We draw the attention of the **Western Trade** to the Superb Empire Planished Steel Range. The oven door is not only braced but also spring balanced. A lever is attached to the front key-plate to raise it as desired, and contrived also to hold it up if necessary. The Superb throughout is substantial, its nickel dress alone making it a ready seller, besides, it is made by a Western stove factory for Western people only.

BEST OF REFERENCES

count on pail is now 37½ per cent.; and on other galvanized lines the discount is 30 per cent.

CORDAGE—We quote: Rope, sisal, 7-16 and larger, basis, $11.25; Manila, 7-16 and larger, basis, $16.25; Lathyarn, $11.25; cotton rope, per lb., 21c.

SOLDER—Quoted at 27c. per pound. Block tin is quoted at 45c. per pound.

VISES — Prices are quoted as follows: "Peter Wright," 30 to 34, 14½c.; 35 to 39, 14c.; 48 and larger, 13½c. per lb.

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

CROWBARS—Quoted now at 4c. per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6. The "1904" sheep shearing machines are sold at $13.60.

AMMUNITION, ETC.—Quotations are as follows: Cartridges, Dominion R.F. 50 and 5; Dominion, C.F., 33½ C.F., pistol, p.c.; C.F., military, 10 p.c. advance. Loaded shells: Dominion Eley's and Kynoch's soft, 12 gauge, black, $16.50; chilled, 12 gauge, $17.50; soft, 10 gauge, $19.50;

chilled, 10 gauge, $20.50. Shot, ordinary, per 100 lbs., $7.25; chilled, $7.75; powder, F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.

IRON AND STEEL.—Quotations are: Bar iron basis, $2.70. Swedish iron basis, $4.95; sleigh shoe steel, $2.75, spring steel, $3.25; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $9.50, Jessop, $13.

SHEET ZINC — The price is now $8.50 for cask lots, and $9 for broken lots

PIG LEAD—Quoted a $5.85 per cwt.

AXLE GREASE—"Mica" axle grease is quoted at $2.75 per case, and "Diamond" at $1.60.

IRON PIPE AND FITTINGS— Revised prices are as follows:—Black pipe, 1/4 inch, $2.65; 3/8, $2.80; 1/2, $3.50; 3/4, $4.40; 1, $6.35; 1 1/4, $8.65; 1 1/2, $10.40; 2, 13.85; 2 1/2, $19.00; 3, $25.00. Galvanized iron pipe, 3/8 inch, $3.75; 1/2, $4.35; 3/4, $5.65; 1, $8.10; 1 1/4, $11.00; 1 1/2, $13.25; 2, inch, $17.65. Nipples, discounts 70 and 10 per cent.; Unions, couplings, bushings and plugs, 60 per cent.

LEAD PIPE—The price, $7.80, is firmly maintained in view of the advancing lead market.

GALVANIZED IRON—Quoted as follows:—Apollo, 16 gauge, $3.90; 18 and 20, $4.10; 22 and 24, $4.45; 26, $4.40; 28, $4.65, 30 gauge or 10 3/4 oz., $4.95; Queen's Head, 24, $4.50; 26, $4.65; 28, $5.00.

TIN PLATES—We now quote as follows: IC charcoal, 20 x 28, box, $9.50; IX charcoal, 20 x 28, $11.50; XXI charcoal, 20 x 28, $13.50.

TERNE PLATES—Quoted at $9.

CANADA PLATES—Quoted as follows: Canada plate, 18 x 21, 18 x 24, $3.40; 20 x 28, $3.65; full polished, $4.15.

BLACK SHEETS—Prices are: 10 to 16 gauge, 100 lbs., $3.50; 18 to 22, $3.75; 24, $3.90; 26, $4; 28, $4.10.

PETROLEUM AND GASOLINE.—Silver Star in brls. per gal., 20c.; Sunlight in brls, per gal., 21c.; per case, $2.30; Eocene in brls, per gal., 23c.; per case, $2.50; Pennoline in brls., per gal., 24c.; Crystal Spray, 23c.; Silver Light, 21c.; Engine gasoline in barrels, per gal., 28c., f.o.b. Winnipeg in cases, $2.75.

PAINTS, OILS AND TURPENTINE—Turpentine is firm at the recent advance. White lead, pure, $6.50 to $7.50, according to brand; bladder putty in barrels, 2 1/2c.; in kegs, 3 1/2c.; turpentine, barrel lots, Winnipeg, $1.01; Calgary, $1.08; Lethbridge, $1.08; Edmonton, $1.09. Less than barrel lots 5c. per gallon advance. Linseed oil, raw, Winnipeg, 67c.; Calgary, 74c.; Lethbridge, 74c.; Edmonton, 75c.; boiled oil, 3c. per gal. advance on these prices.

WINDOW GLASS—We quote: 16-oz. O.G., single, in 50-ft. boxes—16 to 25 united inches, $2.25; 26 to 40, $2.40; 16-oz. O.G., single, in 100-ft. cases — 16 to 25 united inches, $4; 26 to 40, $4.52; 41 to 50, $4.75; 50 to 60, $5.25; 61 to 70, $5.75. 21-oz. C.S., double, in 100-ft. cases—26 to 40 united inches, $7.35; 41 to 50, $8.40; 51 to 60, $9.45; 61 to 70, $10.50; 71 to 80, $11.55; 81 to 85, $12.60; 86 to 90, $14.75; 91 to 95, $17.30.

BOARD OF TRADE ELECTIONS.

The Montreal Board of Trade nominations are now closed. The expected nomination to the candidates for positions on the executive did not materialize, and George Caverhill is elected president of the Montreal Board of Trade for 1907 by acclamation. Thomas J. Drummond and Peter Lyall are the candidates for the position of second vice-president; Farquhar Robertson is elected by acclamation to the position of second vice-president, and C. B. Esdaile treasurer by acclamation.

A UNIQUE PORTABLE PUNCH AND SHEAR.

The illustration herewith shows a new type of punch and shear being placed on the market by the Canadian Buffalo Forge Co., Montreal, Que. The frame is made of one piece of extremely heavy rolled steel armor plate. All fittings are machined from drop forgings, and at every point in the design and

Portable Punch and Shear.

construction precaution has been taken to supply a machine which is practically indestructible. This tool is remarkable as a high power portable punch and shear. As an example, six-inch angle iron can be sheared in two cuts. The armour-plate frame of the tool makes it so light that it is easily rolled about the shop, or from place to place for odd jobs. It is a style of machine that blacksmiths and repair-shop craftsmen can use to advantage. The punches and dies furnished with this machine are 3/8, 1/2, 5/8, 3/4-inch. The machine will shear a 6x3/8-inch bar, depth of throat 7 inches, height 58 inches, weight with truck 850 lbs.

BURMAN HORSE CLIPPERS.

One of the first manufacturers to make horse clippers was the firm of Burman & Sons, Birmingham, England, which was established in 1871, they being the original patentees of the reversible double action clipper. They have since extended the scope of business by manufacturing toilet clippers for barbers' use, power horse clipping machines and sheep shearing machinery, both for hand and power and for complete equipment for shearing stations. They have also absorbed by purchase the clipper departments of the following firms, during the last few years: Hipkiss & Co., Birmingham; Phillips & Bullows, Walsall; W. Bown, clipper department, Birmingham; The Kimberley Tool Co., clipper department, Birmingham. The works have been rebuilt and added to from time to time to cope with the increasing business.

The firm's best known horse clipper is the Newmarket, which has had a large trade in Canada for the last 20 years. Other well known machines are the Grand, Goodwood and Handicap, while amongst toilet clippers the Despatch is firmly established as a popular selling line at moderate price. A new feature in high-class barbers' clippers is the push spring toilet, which will shortly be placed on the market. The power horse clipper is slowly but surely ousting the hand clipper from the market, and now that the power clipper is offered at about the same price as half dozen hand clippers, it is not to be wondered at that they are becoming increasingly popular.

Burman & Sons have been represented in Canada for many years by B. & S. H. Thompson & Co., Montreal, who hold a stock of their goods. A new booklet for the year 1907 has just been issued and copies will be sent to any dealer mentioning this paper.

CAUSES OF FAILURE.

Bradstreets of January 22, analyzes the failures of 1906 in the Dominion of Canada and Newfoundland, as follows:

Failures due to	No.	Assets.
Incompetence	203	$ 878,185
Inexperience	41	250,238
Lack of capital	626	2,266,775
Unwise credits	13	1 90,100
Failures of others	14	101,200
Extravagance	9	52,175
Neglect	41	52,064
Competition	9	12,213
Specific conditions	168	392,766
Speculation	7	26,600
Fraud	108	182,760
Totals	1,239	$4,305,076

PREMIUMS HELP TRADE.

R. F. Lund, general sales agent for the Dover Manufacturing Company, Canal Dover, Ohio, was a caller at the Toronto office of Hardware and Metal on Monday last. Mr. Lund looks after the sale of asbestos sad irons as premiums for newspapers and says that experience has shown the sale of special irons in this way to be very helpful to the trade in the regular goods sold exclusively through the retail hardware trade. In Philadelphia, for instance, the "North American" used twenty-one carloads of the small French laundry irons as premiums, making a house-to-house canvass of the city and district, "Asbestos" irons being thus given a tremendous amount of free advertising. As a result of the premium campaign the demand for the other sizes of irons was increased fully 1000 per cent.

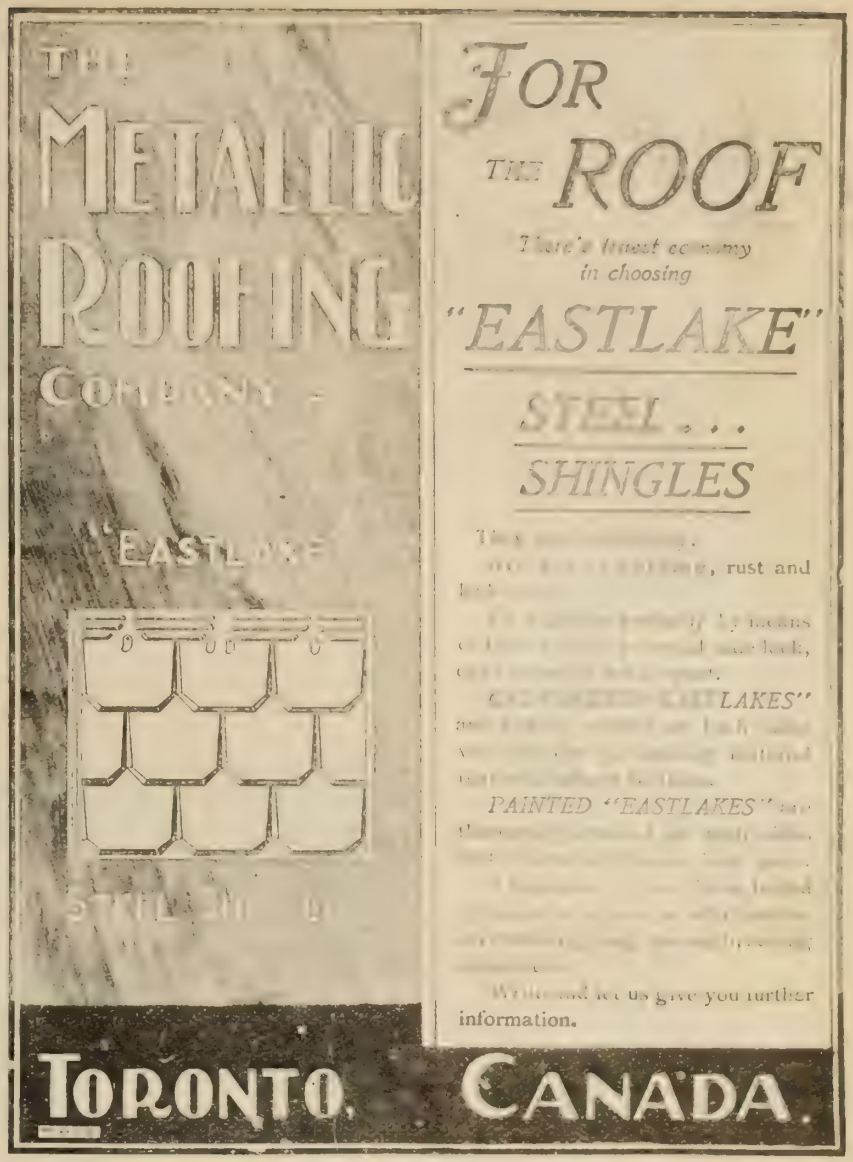
The Toronto Daily Star has contracted for 10,000 French sets of "Asbestos" irons to be used as premiums and the results of their canvass in Toronto will be watched with interest by the trade.

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

Artistic and Dramatic.



The James Robertson Company, Montreal and Toronto, have supplied their plumbing and paint customers with a beautiful dramatic calendar, a companion piece to the one issued a year ago. The calendar is a very expensive one, suitable for drawingroom decoration, containing, as it does splendid artistic reproductions of the likenesses of four of the best known actors and actresses, each picture being mounted separately.

Power and Hand Clippers.

Burman and Sons, Birmingham, Eng., have just issued a catalogue of 7x10 inches, containing 30 pages fully illustrated with various lines of horse and sheep clippers, for both hand and power use, as well as other devices which are manufactured by them for the sharpening of knives for these instruments.

Handsomely Framed Picture.

Shurly & Dietrich, Galt manufacturers of the famous Maple Leaf saws, are supplying the trade with a large, beautiful frame, enclosing a handsome advertisement, showing a maple leaf with a hand-saw in the centre. The prominent place given these pictures by the trade in former years, will no doubt be continued. The picture will prove an ornament to any hardware store, and any customer not having received a sample should immediately send and procure one for store decoration.

Western Canada Factory, 797 Notre Dame Ave., Winnipeg, Man.

TAXES ON TRAVELERS.

The British Board of Trade has issued a useful bluebook, which gives the following list of British colonies where there are regulations or taxes upon travelers, with the annual amount payable:

New Zealand (£5).
Cape Colony (£25).
Natal (£10).
Transvaal (£10).
Orangia (£20).
Prince Edward Island ($20).
Quebec ($50 up).
British Columbia ($100).
British Honduras ($10).
Bechuanaland ($10).

In New Zealand the fee is held as a guarantee that the income tax due on the business done in the colony will be repaid. In Prince Edward Island and British Columbia the licenses are much higher for travelers selling intoxicating liquors or cigars.

In all other parts of the British Empire commercial travelers can carry on their work without hindrance.

Appended is a list of foreign countries which impose taxes on the ambassadors of trade, together with the annual amount charged:

Argentine Republic (varies in different provinces).
Bolivia ($300).
Brazil (varies according to province).
Bulgaria (£6).
Congo Free State (£6).
Denmark (£9).
Germany (1s).
Mexico (varies according to province).
Norway (£5 11s. per month).
Paraguay (£10 to £15).
Russia (£26 7s. 5d.).
Sweden (£5 11s. per month).
Uruguay (£21).

The commercial traveler in Russia has no fewer than four separate payments to make every year.

GOVERNMENT TO MAKE WIRE NETTING.

The Government of Victoria, Australia, has accepted a local bid for the supply of eight machines at the price of $5,000, for the manufacture of wire netting. These machines are for the purpose of establishing the industry in the penitentiary at Melbourne and supplying prison-made wire netting to landowners at cost price on long terms of repayment to enable them to cope with the rabbit pest.

Put yourself in your employer's place and figure out what kind of an employe you would hire to get the most out of your business. Then set yourself to try to be that employe.

HAMILTON ONT.

FOUNDRY AND METAL INDUSTRIES

The Dyment Foundry Company, of Barrie, are now busy working to complete some orders which were on hand at time of fire. When these are finished the men will be let go and the buildings cleared up.

The citizens of Sydney have voted to grant a bonus of $50,000 to the new Rolling Mills Company. The company will begin building operations as soon as possible.

The Ontario Iron and Steel Company's plant, which has been under construction for some months at Welland, will be a much larger industry than was expected. The plans now are for an expenditure of $300,000, and the works will employ about five hundred men. It is expected they will be completed by June 1st.

The Niagara Falls Machine and Foundry Company have secured a large contract to supply cast and wrought iron work for the Michigan Central's Detroit river tunnel from the contractors, the Butler Bros. & Hoff Company. They have another contract to supply fire hydrants for the city of Toronto. The company's foundry is to be enlarged at once.

A charter has been granted by the Manitoba Government to the Manitoba Rolling Mills Company, with a capital of $100,000, to take over and operate the Kirkwood Iron & Steel Rolling Mills, of Winnipeg. These mills were built by T. M. Kirkwood, Toronto, who has lately associated with him the president and officers of the United States Horseshoe Company, of Erie, Pa., Mr. Kirkwood will be the vice-president of the company.

R. L. Worthington, who has severed his connections with the Vulcan Iron Works, of Winnipeg, entertained the foreman and office staff at a tea on Jan. 7, when he was presented with a beautiful combination desk and book case. Mr. Worthington is resigning his position as draughtsman after six years with the Vulcan Works, to accept a similar position with Kelly Bros. & Mitchell, Winnipeg.

Another car construction plant is to be established at Montreal. It will be the largest steel and wood car factory in Canada. This week a number of capitalists and railway men, including Fred Eaton, president of the American Car and Foundry Company, Berwick, Pa., were shown over the city by Messrs. Frank H. Dunn and O. C. Kahler, of Berwick, Pa. Both of these gentlemen recently resigned from the service of the Dominion Car Company. A site has been selected between the Canada Car Company's premises and that of the Dominion CarCompany, near Montreal West. The new works are to have a capacity of fifty to sixty completed cars a day. The estimated cost is five million dollars. The formality of organizing the company has yet to be attended to, and even the name is not yet decided upon, but operations will be started at once, it is stated, and it is promised that the works will be turning out cars early in the coming autumn.

A BETTER QUALITY OF LINSEED OIL FOR CANADA.

The manufacture of Strictly Pure Screw Press Linseed Oil in Canada by The Sherwin-Williams Co. marks a new standard of quality for linseed oil in the Dominion. By the "screw press process", which they control exclusively in Canada, they are able to extract from the flaxseed a quality of linseed oil not heretofore possible. Their "Screw Press Oil", as the new brand is called, is clearer, purer and lighter than other brands of strictly pure linseed oils.

A Battery of Screw Presses.

The "screw press process" extracts the oil from the flaxseed at a low temperature. In all other processes the seed is heated to a high temperature to secure a satisfactory yield of oil per bushel of seed. Where the seed is highly heated, the albumen and mucilaginous matter are freed and allowed to get into the oil. This foreign matter in the oil assists in the disintegration of the paint or varnish film. The "screw press process" leaves this matter in the meal.

The Company's new linseed oil mill is a part of their manufacturing plant at Patrick and Centre Streets, Montreal. They have erected special buildings there for their screw presses, filter presses, storage tanks, etc., and have built a large elevator for the handling of the seed, and steel tanks of large storage capacity for seed storage.

The New Linseed Oil Mill of The Sherwin-Williams Co., at Montreal.

1797

The line of linseed oils The Sherwin-Williams Co. is now manufacturing in Canada includes the following:

The S-W. Strictly Pure Screw Raw Linseed Oil.

The S-W. Strictly Pure Screw Press Kettle Boiled Linseed Oil.

The S-W. Strictly Pure Screw Press Bleached or Refined Linseed Oil.

The Company will be glad to send further information and prices to those interested in *quality* linseed oil. Address, The Sherwin-Williams Co., 639 Centre St., Montreal, Que.

POINTS ABOUT NEEDLES

One needle is a pretty small item, but the daily consumption of something like 3,000,000 needles all over the world makes a pretty big total. Every year the women of the United States break, lose, and use about 300,000,000 of these little instruments, writes H. R. Christy in Scientific American.

Our needles are the finished products of American ingenuity, skill and workmanship and yet how many people, threading a needle or taking a stitch, have ever given a thought to the various processes through which the wire must pass ere it comes out a needle? The manufacture of a single needle includes some twenty-one or twenty-two different processes, as follows: Cutting the wire into lengths; straightening by rubbing while heated; pointing the ends on grind-stones; stamping impression for the eyes; grooving; eying, the eye being pierced by screw presses; splitting, threading the double needle by the eyes on short lengths of fine wire; filing, removing the "cheek" left on each side of the eye by stamping; breaking, separating the two needles on the one length of wire; heading, heads filed and smoothed to remove the burr left by stamping and breaking; hardening in oil, the needle is thus made brittle; tempering; picking, separating those crooked in hardening; straightening the crooked ones; scouring and polishing; bluing, softening the eyes by heat; drilling or cleaning out the sides of the eye; head-grinding; point-setting, or the final sharpening; final polishing; then papering, and finally, labeling. For wrapping, purple paper is used, because it prevents rusting.

The needle, as we see it to-day, is the evolved product of centuries of invention. In its primitive form it was made of bone, ivory, or wood. The making of Spanish needles was introduced into England during the reign of Queen Elizabeth. Point by point the manufacture has improved, until the little instrument is one of the highly finished products of nineteenth century machinery and skill.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

The new fire station in Toronto will cost nearly $90,000.

The new Union Station to be built in Toronto will cost $2,000,000.

The Bank of Montreal will erect a fine office building in Vancouver.

A new theatre will be built in London, Ont., by A. J. Small, Toronto.

A new collegiate institute will be erected at Brandon, Man., at the cost of $65,000.

The William Rogers Company have commenced the plating of silverware at Niagara Falls.

The Mickle Dyment Lumber Company will erect a new factory in Brantford at the cost of $10,000.

J. V. Jenkins, proprietor of the Quinte Hotel, Belleville, which was burnt some time ago, will rebuild the hotel.

A new church will be erected in Regina at the cost of $40,000, having a seating capacity of 1,000 people.

Building permits to the amount of $84,900 have been issued in Toronto for the week ending January 19.

The Canada Screw Company will begin extensive building operations in the spring, doubling the capacity of their plant in Hamilton.

The Phillips Manufacturing Company of Toronto have plans out for a large factory, which will be erected for them in the spring.

The Ontario Lamp and Lantern Company, of Hamilton, have taken out a permit for an addition to their factory to cost $2,500 .

The Dominion Express Company will erect a large and commodious shipping and receiving building near the C.P.R. depot in Winnipeg.

Owing to the scarcity of brick the new telephone building at Edmonton is to be of concrete up to the street level, and of cement blocks above that.

A factory for the manufacture of automatic fire shutters will be established at Niagara Falls shortly. The company has many orders on hand now.

The Montreal Street Railway Company are asking the Quebec Government for authority to increase their capitalization from $10,000,000 to $18,000,000.

A large metal manufacturing company is negotiating to locate in Calgary. They offer to build a plant costing $100,000 and employ from sixty to seventy hands.

The M. C. Galarneau Company, of Montreal, who were burned out in the late disastrous fire at that place, have decided to erect a large warehouse for their leather business.

Three hundred houses and a number of factories were erected in London, Ont., last year. The total cost of the dwellings is estimated at $750,000, and of the factories and public buildings $450,000, or $1,200,000 in all.

The Standard Fuel Manufacturing Company of Fairview, Halifax, have decided to move their works to Amherst, N.S. The company manufactures a fire lighter composed of sawdust and a chemical mixture formed into briquettes.

The Metal Shingle and Siding Company, Preston, are erecting a fine new two-storey office building. The building is being metal-sheeted in the Ionic style, and the interior will have metal walls and ceilings.

The Canadian Northern Railway has purchased about 110 acres of land on the Don flats, Toronto, to be used for roundhouses, car sheds, repair shops, cold storage plant and other requirements of the railway.

Marble is being used in the construction of new buildings and the remodelling of old to a greater extent than ever before. The use of this material is a valuable indication of the strength of the building market, and of the increasing prosperity of the country.

If the by-law granting the Plumbers' Supplies Co., of Galt, $15,000 is passed, they will erect a factory containing 44,000 square feet of floor space. The company must agree to expend $10,000 on buildings and plant and to employ at the end of 1908 at least 50 hands.

The largest and heaviest single block of granite ever sent from the United States into Canada has just been shipped to Montreal and will be fashioned into a memorial to be erected in honor of the late Hon. Raymond Prefontaine, Minister of Marine and Fisheries.

The Northern Turpentine Company has been incorporated with a share capital of $250,000, for the purpose of manufacturing turpentine, tar, charcoal, etc. The head office will be at Ottawa, the directors being A. H. Edwards, E. A. Reid, and R. G. Code, of Ottawa.

Owing to the remarkable electrical development in Canada, the Canadian General Electric Company, of Peterboro, has found it necessary to erect still another large machine shop, which will mean that between three and four acres of floor space will be occupied by this department.

A meeting of the creditors of the Toronto Plaster and Supply Company, who have a factory in Toronto, and which assigned about a week ago, was held last Saturday. The firm was given a week in which to make an offer for the property: Its liabilities are about $4,200, and there is a surplus of about $2,000.

The Safety Explosives Company has been incorporated with a share capital stock of $300,000 for the purpose of manufacturing explosives and chemicals of every nature. The head office will be at Montreal, Que., the directors being W. H. Evans, R. W. Withycomb, W. A. Wier, W. J. Wright and A. W. C. Macalister of Montreal.

The Producers Torpedo Company has been incorporated with a share capital of $15,000, for the purpose of manufacturing nitro-glycerine, dynamite and other high explosives. The head office will be at Leamington, the provisional directors being G. W. Benson, E. Wigle and E. Winter, of Leamington, and Wm. Fleming, of Kingsville.

Tudhope, Anderson & Company have been incorporated with a share capital of $300,000 for the purpose of manufacturing all kinds of machinery, farm implements, carriages, waggons, harness, etc. The head office will be at Winnipeg, the directors being H. F. Anderson, J. J. Pryan, S. H. Ross and T. A. Stulter, of Winnipeg, and Jas. B. Tudhope, of Orillia.

A Brantford man has secured the contract for the erection of Normal Schools for the Ontario Government at the following places and prices: North Bay, $54,000; Peterborough, $53,800; Stratford, $52,050; Hamilton, $52,050. The schools will be uniform in size, with 78 feet frontage and a depth of 110 feet, built of stone and brick. Including the basement there are four floors.

The Canadian Nut & Bolt Company have decided to build a factory at Niagara Falls, Ont., commencing work early in February. They have a contract to supply a large quantity of nuts and bolts for railway switches to the Canadian Ramapo Iron Works Company, which is building a big plant there. About fifty men will be employed in the nut and bolt works. The buildings will be of steel and concrete.

Geo. W. Reid and Company have been incorporated with a capital stock of $150,000, for the purpose of manufacturing concrete, cement, asphalt, sheet metal roofing preparations, and other materials which can be used by contractors, builders or roofers. Head office will be at Montreal, and directors will be C. T. Williams, F. H. Barwick, E. C. Barwick and K. N. Church, of Montreal, and J. K. McNutt, of Westmount.

Do not shirk your work and be always thinking of the money side of the proposition. Give good value for the money you receive, and you will be sure to succeed.

C.M.A. EXECUTIVE MEETING.

For the first time in the history of the association, the executive committee of the Canadian Manufacturers' Association met in Montreal, January 17, 1907.

Up to the present time these meetings have been held in Toronto, and have been well attended by representatives from Montreal, Quebec and other eastern points. The principal idea in holding the meeting in Montreal is to allow representatives to attend who are at a long distance from Toronto, on which account they have heretofore been prevented from taking an active part in the work of the association.

The members, sixty-two in number, were entertained to a luncheon at the Canada Club, and afterwards held their meeting, when the recent tariff changes, technical education, and other matters were discussed at length.

The following members of the executive council were present: J. S. N. Dougall, William Bramley, E. Tougas, Alderman Sadler, George E. Drummond, D. J. Fraser, S. W. Ewing, Fred. Birks, Louis Simpson, J. C. Casavant, Robert Munro, Col. Burland, James Davidson, R. C. Wilkins, J. H. Sherrard, Hon. J. D. Rolland, J. J. McGill, W. T. Whitehead, Wm. Smaill, R. J. Younge, D. Morrice, T. Esmond Peck, C. C. Ballantyne, P. Hamill, William Cauldwell, J. R. Kinghorn, S. S. Boxer, Joseph Horsfall, J. M. H. Robertson, F. W. Fairman, Montreal; J. P. Murray, T. A. Staunton, J. H. Housser, George Brigden, Col. J. B. MacLean, G. Frank Beer, F. A. Ralph, A. S. Rogers, W. B. Tindall, W. K. George, George Booth, J. M. Sinclair, Toronto; George E. Amyot, G. A. Vaudry, Quebes; Lloyd Harris, Harry Cockshutt, C. H. Waterous, Brantford; William Levis, Halifax; F. L. Haszard, Charlottetown; J. Hewton, Kingston; Jas. Playfair, Midland; A. Saunders, Goderich; T. J. Storey, Brockville; C. S. G. Wilson, Ingersoll; J. M. Jenckes, Sherbrooke; R. J. White, Smith's Falls; D. Wilson, Collingwood.

ARTISTIC TILLSONBURG WINDOW

W. R. Hobbs, Tillsonburg, had a most effective Christmas display of seasonable goods. "Passing down the street at night," writes E. Norman, London, an observing traveling salesman, "there appeared to be myriads of multi-colored lights moving and flashing in the store window. Curiosity aroused, the sightseer drew closer, and saw tastefully dressed oblong trays carrying silver and plated goods, cutlery and other Christmas presents, coming into view and receding therefrom, the trays being held horizontally while making a circular revolution. The suggestion conveyed by the advancing goods to the onlooker's acquisitive desires, though mute, was forcible, and we learn that coin of the realm was freely exchanged as a result. The window dresser is to be congratulated on the artistic and business effects he obtained from two cycle wheels, a few laths, much bunting, a home-made water motor, and a piece of string used as an invisible driving belt. Electric light lamps of red, green, orange, and blue, alternately flashing, furnished the myriad light ensemble, skilfully used to attract the distant passer-by to become a close inspector and final purchaser."

Please send for descriptive catalogue, free upon request. It tells all about it.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

BARGAINS IN SPORTING GOODS.

In almost every line of business it has been found to be both profitable and good policy to hold low-priced sales, or bargain days, at certain times when conditions and circumstances seem to justify them. This method is an excellent one, says the Sporting Goods Dealer, for clearing out old stock and making room for new models. Sporting goods dealers have for some time been followers of the practice and these sales are being held with increasing frequency. A bargain department as a permanent fixture of the store where sporting goods are retailed is hardly a wise policy, because it inevitably results in a general reputation for cheapness which naturally produces a slight distrust in the quality of goods. However, there are certain classes of goods, such as fishing tackle, that can be offered at reduced prices without affecting the reputation of the store, while at the same time serving as a bait for other business. The bargain department in the sporting goods trade is seldom a source of profit and its purpose is mainly to rid the shelves of superfluous goods; the profit is always incidental and indirect rather than primary. In disposing of "stale" goods at low-priced sales, it is a good plan to mix in some articles of higher grade and established prices in order to present a showing that is not entirely marked by cheapness. In pricing bargains it should be with the idea of getting rid of them at any cost and not with the idea that a profit of any amount is to be forthcoming. Out-of-date goods should have no place on the shelves of a first-class store and the money they will bring is much better invested in new goods. The retailer of sporting goods really has many opportunities to present goods at bargain prices. New models in guns, changed styles in sportsmen's clothing, fresh tackle and other goods are constantly being received. Some of this material finds a ready sale at its appointed prices during the season of its usefulness, and much of it does not "take" but remains behind to accumulate dust and occupy space that can be ill afforded. It is not only as a means of removing stale goods that the bargain sale in convenient and beneficial to the retail merchant. A few choice articles that will insure a fair profit can be placed prominently in the store and advertised at stated periods. They will help to draw customers to the place and in every way call attention to the fact that there is a store where sporting goods are sold and whose manager is wide awake and after business.

OTTAWA STOVE FOUNDRY.

The Canada Stove Company, Ottawa, which succeeded the Ottawa Furnace & Foundry Company, Ottawa, several months ago, are now manufacturing "Standard" stoves and ranges and "National" hot water boilers and hot air furnaces. They have made several improvements on the old lines made by the Ottawa company as well as extensive improvements to the plant. They have also installed the latest sanitary improvements for the comfort and convenience of the office staff and workmen. The Canada Stove Company is working under a provincial incorporation, the capitalization being $90,000.

OILED AND ANNEALED WIRE

LOOK FORWARD, and be prepared for the Spring trade in Fencing Wire by placing your order now, so that when the rush comes you will be in a position to supply the demand.

In the manufacture of this Wire we are careful as to the annealing so as to have the Wire of sufficient toughness, and our process of oiling insures a dry surface, permitting the Wire to be handled without loss of its protective qualities.

Made by us in both large and small diameter coils.

The Montreal Rolling Mills Co.

Hardware Dealers Should Wake Up—

to the fact that **SHEET METAL BUILDING GOODS** could be made a large and ever increasing factor in their business. Farmers, manufacturers and all owners and builders are daily demanding these goods because they fill satisfactorily the gap which is being left by the diminishing supply of good and cheap timber. Some dealers have already established a considerable trade in this line, proving that it can be done, but it's "only as a drop in the bucket" compared to what's to come. If the **HARDWARE DEALERS** and **TINSMITHS** don't look after this valuable trade, they will live to regret it. **Some one else will reap the harvest.**

Don't say—"**There's nothing in it for me**"—because there certainly is, providing you have the **RIGHT GOODS** and the **RIGHT FIRM** behind them. It doesn't matter about the manufacturers who sell direct to the consumer. One good, square firm, who will **PROTECT** and **HELP** a good orginization of agents, can, with those agents, do more business than three or four of the other kind.

We can show you—all we need to prove to you how this combination will work in 1907 is some more good agents—we've got the goods and the other qualifications. One of our representatives will be along your way soon after New Years to talk to you on the subject. If you are interested drop us a line at once and make certain that you will not be missed.

The GALT ART METAL CO., Limited, GALT, ONT.

Western Distributing Agents, **THE McCLARY MFG. CO.,** Winnipeg and Calgary.

Persons addressing advertisers will kindly mention having seen their advertisement in Hardware and Metal.

Paint, Oil and Brush Trades

FLAX GROWERS' BURDEN.

Deputations recently waited on Finance Minister Fielding, with petitions requesting an increased duty on flax products. The request was refused, however, as it was shown that the change would have a far-reaching effect and heavily burden the makers of paint who use linseed oil, and through these the industries that use paint extensively. The furniture men would also suffer, and other extensive users of tow, which is the rough, green fibre of flax.

During the past fiscal year we imported 1,170,012 gallons of linseed oil valued at $458,937, and on this the duty was $77,945. The rate was 25 per cent., but 1,027,730 gallons valued at $381,170 were imported under the preferential tariff. There were 951 cwt. of flax and raw tow imported free, the value being $5,978, also large quantities of oil cake and flax seed, both being on the free list.

The deputation which waited on the Minister wanted the old duty of $1.25 per cwt. restored, a duty of ten cents per bushel imposed on flax seed, and $10 per ton on green tow. While flax-growing is yet in its infancy in Canada, it is carried on quite profitably in sections of Ontario and the west, and those engaged in it are called upon to bear a share of the burden that certainly must fall somewhere, as the suggested duties would increase the cost of oil cake to the stock-raisers, in addition to increasing the cost of all paints by making linseed oil dearer.

AN INAUGURAL DINNER

The Standard Paint Co. of Canada, Montreal, gave a banquet at the Canada Club on Friday evening, the 18th inst., on the occasion of the opening of their works at Highlands, near Montreal.

After the good things had been disposed of, Major Lockerby, vice chairman proposed a toast to "The King," and the "President of the United States," "Dominion Parliament" was replied to by the Hon. J. B. Rolland, who, after many suitable remarks, ended up by saying he was glad to see the Standard Paint Co. of Canada had not only located in the Province of Quebec, but in Canada's largest city.

The "City of Montreal" was proposed by Peter Lyall, and suitably responded to by Alderman Sadler.

"Canadian Industries" was proposed by D. M. Stewart of the Sovereign Bank and responded to by Messrs. Dougall, Hood, and Lariviere.

"Our Guests" by Felix Jellinck, responded to by Messrs. Decarie, Place, and Black.

"Our Company" by J. L. Decarie, responded to by R. L. Shainwald.

The banquet itself was a sumptuous affair, and served to bring the Standard Paint Co. of Canada and its officers well before the trade in Montreal.

Among those present were: R. L. Shainwald, New York, president of the company; vice-chairman Major D. M. Lockerby, of Montreal, one of the directors; Louis C. Rugen, secretary; J. N. Richards, sales manager; Max Drey, vice-president; Felix Jellinck, treasurer; H. F. Gillespie, assistant superintendent American works; E. H. Morris, Philadelphia; Senator J. B. Rolland; D. A. Campbell; D. J. Munn, of Alex. McArthur & Co.; C. A. Lockerby; Chas. Pope Tucker; John Hugh McComb; J. W. McGregor, of J. C. Wilson & Co.; Howard McComb; John Fisher; L. C. Rugen, Jr., superintendent new works, Montreal; Major R. Starke; E. Lamontague; J. H. Bell; M. Birkett; C. Smallpeice, of Lewis Bros., Montreal; G. R. Burton, of the R. E. T. Pringle Co., Montreal; John Black, Cobalt; A. F. Ross; R. W. Garth; D. Farrell; John Smith; Mr. Belanger; E. F. Casey, of the Montreal street railway; N. Greyburn; A. H. Edwards, of Montreal Light & Power Co.; Andrew Dawes; Alderman Sadler, acting mayor; Lt.-Col. D. M. Stewart, mgr. Sovereign Bank; A. R. Oughtred, K.C.; Peter Lyall; McLea Wallbank; J. S. R. Dougall, president Manufacturers' Association; Geo. Head, president builders' exchange; J. Gagnon, vice-president builders' exchange; J. Lorne, secretary builders' exchange; F. C. Lariviere; Geo. Esplin; A. Scott Robinson; J. L. Decarie, mayor Notre Dame de Grace; A. Ramsay, and many others.

MANITOULIN OIL FIELDS.

If the finds of oil on the Manitoulin Islands are as great as reported the discovery is of immense importance or rather can be made so if the product can be protected from falling into combine hands. A barrel of crude petroleum containing about forty-three gallons can be delivered on board ship for the trifle of ten cents.

Be conscientious. Don't have a relation die too often. Funerals sometimes grow too monotonous to an employer during the baseball season or on matinee afternoons.

LISTEN

You are having all kinds of inducements, "good and otherwise," "mostly otherwise," offered for your Paint business. Exclude the hot air, then boil them down to reasonable business facts, and compare what is left with our Hollywood proposition, and we get the business as sure as you are alive.

Hollywood Paints wear on the job, not off.

BRANDRAM BROS. & CO.
BRANDRAM'S B. B. WHITE LEAD
MANUFACTURERS LONDON ENGLAND

An Important Announcement regarding "Anchor" and "English" Liquid House Paints.

FOR some time we have been supplying the trade with Paints put up under both brands, but for various reasons we find it advisable to sell hereafter only **"ENGLISH" LIQUID HOUSE PAINTS**. The two brands were identical in quality, the only White Lead used in their manufacture being Brandram's B. B. Genuine White Lead, the world's standard for close on to two centuries. So when we sell you **"ENGLISH" LIQUID HOUSE PAINTS** in place of "ANCHOR," you will know that you are getting the same Paints as you ordered under "ANCHOR," and we would ask you to get into the way of specifying **"ENGLISH"** in your orders in place of "ANCHOR." We would also ask you to tell your customers that **"ANCHOR"** Liquid House Paints are now called **"ENGLISH,"** and so assist us to familiarize consumers with the name **"ENGLISH"** as the name of the leading brand of **LIQUID HOUSE PAINTS**.

We maintain the **"ANCHOR"** trade mark on all our other Specialties.

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
239 McGill Street,
Montreal, January 27, 1907

Business has fallen off somewhat during the past week, owing to travelers being impeded by storms and extreme weather conditions, therefore receipts of orders has been somewhat of an erratic description.

Sales of white lead have been slightly checked by a new disposition on the part of purchasers not to pay the advances, but from all appearances, still higher figures are inevitable, owing to the shortage caused by the local white lead company (the only one in Canada at present) having closed down.

The only change this week is in turpentine, which has advanced one cent per gallon.

LINSEED OIL—Very firm. We still quote: Raw, 1 to 4 barrels, 55c.; 5 to 9 barrels, 54c.; boiled, 1 to 4 barrels, 58c.; 5 to 9 barrels, 57c.

TURPENTINE—(In barrels.) Another advance of one cent per gallon has taken place. We quote: Single barrel, 99 cents per gal.; two barrels or over, 98c. per gal.; for smaller quantities than barrels, 5c. extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

GROUND WHITE LEAD—Prices are still firm, but an advance is expected shortly, owing to the shortage caused by the closing down of the local white lead works. Our prices are: Best brands Government Standard, $7.25 to $7.50; No. 1, $6.90 to $7.15; No. 2, $6.55 to $6.90; No. 3, $6.30 to $6.55, all f.o.b., Montreal.

DRY WHITE ZINC—Prices remain very firm with no tendency to advance in the near future. We still quote: V.M. Red Seal, 7½c. to 8c.; Red Seal, 7c to 8c; French V.M., 6c to 7c; Lehigh, 5c to 6c.

WHITE ZINC—Our quotations are: Pure, 8½c. to 9½c.; No. 1, 7c. to 8c.; No. 2, 5¾c. to 6¾c.

PUTTY.—Our prices are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladder putty in barrels, $1.75.

ORANGE MINERAL—Prices are as follows: Casks, 8c.; 100 lb. kegs, 8½c.

RED LEAD—The following quotations are firm: Genuine red lead in casks, $6.00; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs $6, and smaller quantities, $6.75.

PARIS GREEN—Prices remain the same and some jobbers report a little more activity among buyers. In barrels, about 600 pounds, 23¼c. per lb.; in arsenic kegs, 250 lbs., 23½c.; in 50 lb. drums, 24c.; in 25 lb. drums, 24½c., in 1 lb packets, 100 lbs. in case, 25c.; in 1 lb packets, 50 lbs in case, 25½c.; in ½ lb. packets, 100 lbs in case, 27c.; in 1 lb. tins, 26c. f.o.b. Montreal. Term three months net or 2 per cent. 30 days.

SHELLAC—We quote: Bleached, in bars or ground, 46c. per lb., f.o.b. Eastern Canadian points; bone dry, 57c. per lb., f.o.b. Eastern Canadian points; T. N. orange, etc., 48c per lb. f.o.b. New York.

SHELLAC VARNISH—Prices remain: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—A fair business is being done at the same prices. We still quote: $1.20 to $1.50 per gal.

CASTOR OIL—Our prices are: Firsts in cases, 8½c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

BENZINE— In bbls.)—We still quote: 20 cents per gallon.

GASOLINE—(In bbls.)—Our price is 22½ cents per gallon.

PETROLEUM—(In barrels) Our prices are: American prime white coal, 15½c. per gallon. American water, 17c. per gallon; Pratt's Astral, 19½c. per gallon.

WINDOW GLASS — Prices remain firm. We still quote: First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.20; second break, 100 feet, $3.40; third break, 100 feet, $3.95; fourth break, 100 feet, $4.15; fifth break, 100 feet, $4.40; sixth break, 100 feet, $4.95. Diamond Star: First break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second break, $4.80; third break, 100 feet, $5.75; fourth break, 100 feet, $6.50; fifth break, 100 feet, $7.50; sixth break, 100 feet, $7.50; seventh break, 100 feet, $8; eighth break, 100 feet, $9. Double Diamond: First break, 50 feet, $3.45; second break, 50 feet, $3.75; first break, 100 feet, $6.75; second break, 100 feet, $7.25; third break, 100 feet, $8.75; fourth break, 100 feet, $10; fifth break, 100 feet, $11.50; sixth break, 100 feet, $12.50; seventh break, 100 feet, $14; eighth break, 100 feet, $16.50; ninth break, 100 feet, $18; tenth break, 100 feet, $20; eleventh break, 100 feet, $24; twelfth break, 100 feet, $28.50. Discount on Diamond Star, 20 per cent.; on Double Diamond, 40 per cent.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Jan. 25, 1907.

At present the paint trade is very brisk, with large orders being booked daily, for Spring shipments. Hardware merchants and industrial concerns such as carriage and furniture factories, are placing good-sized orders.

While white lead is still unchanged, another general advance is looked for, it having been quoted at a 15-cent advance in eastern markets.

Does your paint trade pay?

It pays many other men. It ought to pay you. There's paint used in your town — lots of it. Are you getting your share? You should!

Take a look at

Ramsay's Paints

Boiled oil and turpentine remain the same as quoted last week

Paris green has experienced another advance, it now being 1 cent higher per lb on both English and Canadian green, with further advances probable. The demand has been very large for this line, and owing to the very high price and great demand of copper, which is extensively used as an ingredient, will make possible a further advance.

Litharge has also advanced from 5½ to 6½ cents per lb. We have received new figures on English castor oil, and are now quoting at 10½ to 11 cents per lb., in cases, and 12 cents for single tins.

WHITE LEAD—Ex Toronto pure white, $7.40; No. 1, $6.65; No. 2, $6.25; No. 3, $5.90; No. 4, $5.65 in packages of 25 pounds and upwards; 1-2c per pound extra will be charged for 12 1-2 pound packages; genuine dry white lead in casks, $7.00.

RED LEAD—Genuine in casks of 500 lbs., $6.00; ditto, in kegs of 100 lbs., $6.50; No. 1 in casks of 500 lbs., $5.75; ditto, in kegs of 100 lbs., $6.25. Litharge, 6½ cents lb.

DRY WHITE ZINC— In casks, 7 1-2c.; in 100 lbs., 8c., No. 1, in casks 6 1-2c., in 100 lbs., 7c.

WHITE ZINC (ground in oil)—In 25-lb. irons, 8c.; in 12 1-2 lbs., 8 1-2c.

SHINGLE STAIN—In 5-gallon lots, 75c. to 80c. per gallon.

PARIS WHITE—90c. in barrels to $1.25 per 100 lbs.

WHITING—60c. per 100 lbs. in barrels; Gilders' bolted whiting, 90c. in barrels, $1.15 in smaller quantities.

SHELLAC VARNISH—Pure orange in barrels, $2.70; white, $2.82 1-2 per barrel; No. 1 (orange) $2.50; gum shellac, bone dry, 63c., Toronto. T. N. (orange) 51c. net Toronto.

LINSEED OIL — Remaining steady at last week's quotations: Raw, 1 to 3 barrels, 58c.; 4 to 7 barrels, 57c.; 8 and over, 56c., add 3c. to this price for boiled oil. Toronto, Hamilton, London and Guelph net 30 days.

TURPENTINE—Remains steady at the advanced price and we quote single barrels $1 to $1.02 per gallon f.o.b. point of shipment, net 30 days. Less than barrels, $1.07 per gallon.

GLUES—French Medal, 12 1-2c. per pound; domestic shee , 10 1-2c. per lb.

PUTTY—Ordinary, 800 casks, $1.50; 100 drums, $1.75; barrels or bladders, $1.75; 100-lb. cases, $1.90;; 25-lb. irons, $1.85; 25-lb. tins (4 to case) $1.90; 12 ½ lb. tins (8 to case) $2.10.

LIQUID PAINTS—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

BARN PAINTS—Gals., 70c. to 80c.

BRIDGE PAINTS—Gals., 75c. to $1.

CASTOR OIL—English, in cases, 10½ to 11 cents per lb., and 12 cents for single tins.

PARIS GREEN—Another advance of 1 cent per lb. is now quoted on green. And Canadian is now listed at 26½c. base price, English at 26¼c. base f.o.b. Toronto.

REFINED PETROLEUM — Dealers are stocking up heavily for the Winter. We still quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM — We quote: Canadian, $1.32; Pennsylvania, $1.58; Ohio, 96c.

New Paint Factory near Montreal.

PROSPECTS BRIGHT IN PAINT TRADE.

Although January is ordinarily a quiet month in the paint trade, business this month among the manufacturers and jobbers is very satisfactory. Many hardware merchants have taken stock of their paints first, so as to enable them to get their orders placed before the general advance in the spring. Others are holding their orders for white lead on account of the present prevailing high prices, but it is doubtful if they will be able to do better than at present.

The general outlook for the paint trade for 1907 is brighter than any previous year. Large numbers of buildings erected last year, many of which are not finished, will require painting. The bright prospects and large number of permits issued to date should encourage manufacturers to turn out an even larger supply than in previous years, especially as spring orders from manufacturers of carriages and farm implements are very large in volume.

Hardware merchants will do well to place their orders for paint as soon as possible this spring, as many manufacturers have definitely announced another advance to take place in the spring.

BLANCHITE

BLANCHITE Paints and Enamels were used for the NEW

HOTEL BELMONT

NEW YORK

ONE of the most elegantly appointed hotels in New York City—constructed of steel, stone and concrete. Lead paints had been specified but as soon as BLANCHITE was tested by the architects, engineers and contractors it was adopted instead.

The Brilliancy of BLANCHITE Enamels are a feature of the Hotel Belmont.

Plumbing and Steamfitting

A UNIVERSAL PLUMBING CODE

A Plea for Uniformity—By Herbert F. Shade, Victoria, B.C.

There is no question of such prime importance in the minds of those interested in the proper and efficient disposal of household wastes by water carriage,

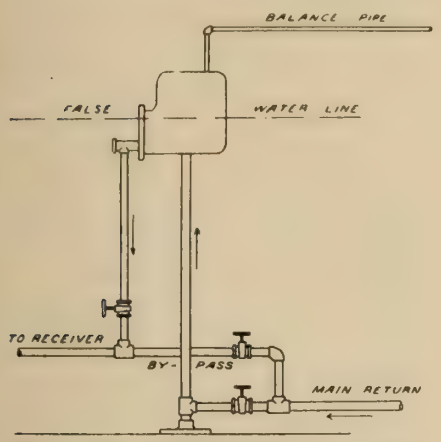

Fig. 1—Steam Trap Connected for Use as a Water Line Trap.

as is the establishment and the strict maintenance of a universal plumbing code, one that will give all the structural precautions necessary to be observed in order to prevent the ingress of sewer air into our homes and buildings, and such that will provide the immediate removal of all household wastes. As outlined in the Plumbers' Trade Journal by Mr. Shade, the main essentials are as follows :

Class of Fixtures.—That the receptacle where the water is soiled shall be of an impervious nature, and so formed that it will be readily cleansed by a minimum amount of water.

Waste Pipes.—That the pipes which convey the wastes away from the fixtures should be of such diameter that they would be self-cleansing in their action, and of such material that their efficiency would not be impaired by the action of the use for which they are intended to serve.

Traps.—That there should be placed as close to the fixture as possible a barrier in the form of a water seal, to prevent the air contained in the pipes coming in contact with the air in the room.

Vents.—That the fixture trap should be supplied with an air pipe, attached to the uppermost portion of the sewer side of the trap, and carried to the outer air, so as to prevent the loss of the trap seal by syphonic action, and to establish a current of fresh air through the drainage system at all times.

Main Drain.—That the whole system should be perfectly sound and tight, and of one continuous grade to the outlet without any impediment whatever, save the fixture trap.

These are the chief features of all plumbing regulations, and are so acknowleged by almost every one connected with the profession, but the construction of plumbing is of such a complex nature that it could not be governed by these few and simple rules, and it is in the complication of detail where a wide difference of opinion prevails, and to these questions, only, that are most at issue I will express my views.

Methods of Back Venting.

The necessity of the trap at the fixture is an undisputed fact, but in the application of the vent pipe in its proper form there has lately been ronsiderable discussion, and while my opinion may be simply a repetition of what has been said along these lines, it is the result of practical observations following the use of the vent pipe. To be better understood I will refer to Fig. 1, which illustrates the ordinary method of back venting, the demerits of which are as follows, viz.:

1. That the opening of the vent pipe at (a) will be eventually closed by the adhesion of grease contained in waste matter to the sides of the vent pipe. (This I have found to be true by actual observations).

2. That the opening at (a) in the majority of cases is smaller in area than the vent pipe, as this is solely dependant upon the mechanic who actually performs the work.

3. That the vent connection being of such close proximity to the water seal that it adds additional danger of the loss of the seal by evaporation.

4. That any scale, silt or other matter that falls down the vertical vent pipe, would lodge at (b) and thereby destroy its purpose.

The economic and effective remedies of the defects of Fig. 1 are eliminated by the method shown in Fig. 2, which is almost in general use in the west.

1. That it is practically impossible to close up the opening of vent at (c) by grease, hair, lint. etc.

2. That the area of the opening of the vent pipe at (c) is as large, and in most cases larger than the vent pipe.

3. That the circulation of air through the vent system is farther removed from the water seal, which reduces the liability of evaporation.

4. That any scale, silt or other matter that falls down the vertical vent pipe is carried direct to the waste pipe, and thus removed from the system.

Should Vent Pipe Be Abolished ?

Much has been said regarding the abolishment of the vent pipe and the general use of non-syphon traps, but the better knowledge due to considerable familiarity with plumbing has proved to my satisfaction that the vent pipe cannot be done away with, unless we look upon the actual cost of trap venting in preference to the proper safeguards for our health.

Most regulations allow vent pipes to converge into one main vent within a certain radius, provided that the branch vents connect to the main vent above the fixture it is intended to serve. In Victoria this is allowable provided that the branch vent does not deviate from an angle less than 45 degrees from vertical (as shown in the sketch of our system). In few cases this cannot practically be done, but in this event the horizontal portion must connect to a main vent leading direct to a waste pipe ; this removes the liability of the horizontal portion becoming obstructed, save that which it would collect in its own length. This is what is termed "continuous venting," which increases the life of vent pipes indefinitely, as they cannot be blocked under anything like ordinary conditions. For this class of work there are now special fittings on the market which have given excellent results by test.

The much debated question of the trap on the main drain is still an open one, some authorities being strenuous in their advocacy of its adoption, while

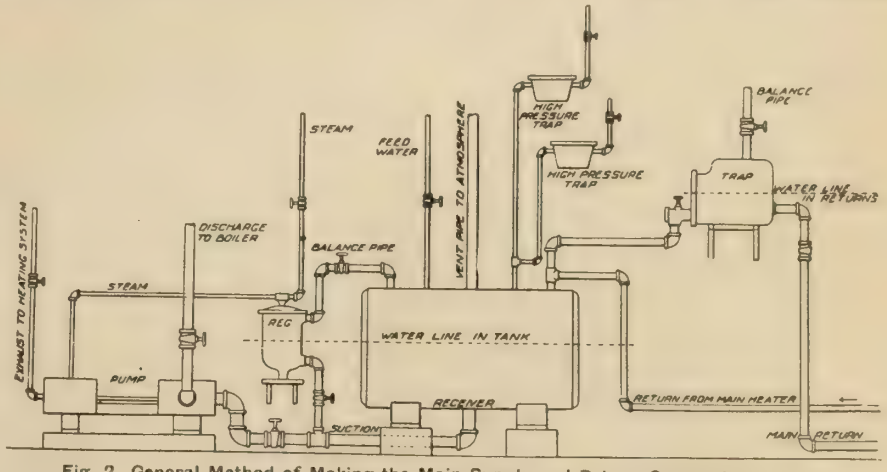

Fig. 2—General Method of Making the Main Supply and Return Connections for an Exhaust Steam Heating System.

others are just as strong in their opinion to the contrary. The writer previous to entering upon his present duties was a supporter of the use of the trap, but by actual observations and experiments and results obtained, I am now convinced that the omission of the trap is a step in the right direction, and by its use the proper ventilation of our sewerage system cannot be attained. We have in Victoria 16 miles of sewers where the use of the trap is general, and about 14 miles where the connections are direct without the trap, the difference in the efficiency between the trapped and the non-trapped drain has proven to me that the latter is far the most sanitary of the two methods.

Ventilating Rooms.

The theory of ventilating a room by a continuous inflow of fresh air, and a constant outflow of foul and exhausted air, precisely the same requirements are necessary for your sewerage and drainage systems. On this point almost all authorities agree and that it should be carried out with simplicity and without mechanical aid.

Now as there is no doubt as to the desirability of establishing a current of air through the whole system, and under ordinary conditions there would be a better movement of air if the inlet was at the opening in the street, and the outlet at the soil pipe above the roof, this cannot possibly be secured with trapped house connections, therefore it is necessary to remove the trap and make every connection to the sewer a vent for the same, causing the openings on the street to be inlets for the admission of fresh air, instead of foul air outlets as they are when the trap is used.

Whenever the omission of the trap is anything like general the ventilation secured through the connections reduces the percentage of gas in our sewers to a minimum, and there is no other way in the writer's opinion that sewers can be so effectively ventilated as through house drains, and I cannot see where there can be the slightest objection to this use being made of them.

If the connection between the house and the sewer is without interruption, all wastes that are discharged into it are carried away to a safe distance from the house before putrefaction sets in. If a trap is placed in its course, its seal will collect more or less accumulation of sewage matter, and it is now a recognized fact that sewer gas to a large per cent. is home made, its production taking place within the house drains themselves, and as a rule with few exceptions the air contained in the house drain is far more offensive than that contained in the sewer where the trap on the house drain is used, therefore it seems that by the omission of the intercepter trap the best possible solution of how to ventilate sewers is reached.

The objection generally advanced against this system of sewer ventilation is the cry that sewer gas is laid on to the house, and that contagious diseases existing in other houses will communicate their infection with the houses that are not directly cut off by the use of the trap. This theory has long since been an exploded one, and it has been demonstrated by researches of eminent scientists that pathogenic or disease breeding bacteria have never been found in sewer air and that in sewage itself they do not and are not likely to thrive.

FEATURES OF EXHAUST STEAM HEATING

Charles L. Hubbard, in The Heating and Ventilating Magazine

Steam, after being usesd in an engine, contains the greater part of its heat, and if not condensed or used for other purposes it can usually be employed for heating without affecting to any great extent the power of the engine.

In general, we may say that it is a matter of economy to use the exhaust for heating, although various factors must be considered in each case to determine to what extent this is true. The more important considerations bearing upon the subject are: the relative quantities of steam required for power and for heating, the length of the heating season, the type of engine used, the pressure carried, and, finally, whether the plant under consideration is entirely new or whether, on the other hand, it involves the adapting of an old heating system to a new plant.

The first use to be made of the

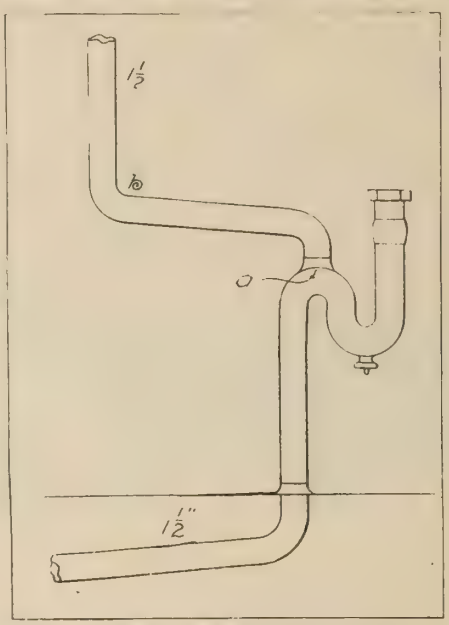

Fig. 1—Ordinary Method of Back Venting.

exhaust steam is, of course, the heating of the feed-water, as this effects a constant saving both summer and winter, and can be done without materially increasing the back pressure on the engine.

Under ordinary conditions about 1-6 of the steam supplied to the engine can be used in this way, or more nearly 1-5 of the exhaust discharged by the engine.

We may assume in average practice that about 80 per cent. of the steam supplied to an engine is discharged in the form of steam at a lower pressure, the remaining 20 per cent. being partly converted into work, and partly lost through condensation.

The latent heat in a pound of steam at atmospheric pressure is 966; therefore, out of each pound of live steam furnished to the engine there will be 966x.8=773 heat units available for heating purposes. It requires practically 210−50=160 heat units to raise one pound of feed-water from 50 degrees to 210 degrees; and this is

$\frac{160}{773} = \frac{1}{4.8}$ or about 1-5 of the available exhaust. Taking this into account, there remains for other heating purposes 8 x 4-5=.64 of the entire quantity of steam supplied to the engine.

When the quantity of steam required for heating is small compared with the total amount supplied to the engines, or where the heating season is short, it is often more economical to run the engines condensing and use live steam for heating. This can be determined in any particular case by computing the saving in fuel by the use of a condenser, taking into account the interest and depreciation on the first cost of the condensing apparatus, and the cost of water, if it must be purchased, and comparing it with the cost of heating with live steam.

Usually, however, in the case of office buildings and institutions, and commonly in the case of shops and factories, especially in northern latitudes, it is advantageous to use the exhaust for heating, even if a condenser is installed for summer use.

The principal objection to the use of exhaust steam for heating has been the higher back pressure required on the engine. There are two ways of offsetting this loss; one by raising the initial or boiler pressure, and the other by increasing the cut-off of the engine.

Engines are usually designed to work most economically at a given cut-off, so that in most cases it is undesirable to change the cut-off to any extent. Raising the boiler pressure, on the other hand, is not so objectionable if the increase amounts to only a few pounds.

A modern heating plant with ample mains and branches should circulate freely on a pressure not exceeding 2 pounds, and good results are often obtained on one pound or even less.

The systems of steam heating in common use are those in which the water of condensation flows back to the boiler by gravity. When exhaust steam is used the pressure is much below that of the boiler and the condensation must be returned either by a return trap or pump.

As the exhaust steam is often insufficient to supply the entire heating system, it must be supplemented with live steam taken directly from the boiler.

This must first pass through a regulating valve in order to reduce the pressure to that carried on the heating system.

An engine does not deliver steam continuously but at regular intervals at the end of each stroke, and further the amount will vary with the work done.

When the work is light very little

steam will be admitted to the engine, and for this reason the supply available for heating will vary somewhat, depending upon the use made of the power. In mills the amount of exhaust steam is practically constant; in office buildings where the exhaust is obtained from a lighting plant, the variation is greater, especially if power is also supplied for running elevators.

In order to make the steam supply automatic, the system must be equipped with both a reducing valve and a relief or back-pressure valve—the former for admitting live steam when the exhaust is not sufficient to maintain the required pressure, and the latter to allow the surplus to pass outboard when the quantity is greater than can be condensed in the heating system. Before entering the heating main the exhaust should be passed through a good form of oil separator, and it is well to still further purify the return by the use of a settling chamber.

Any of the usual systems of piping may be used, but great care should be taken that as little resistance as possible is introduced at bends and fittings; and the mains and branches should be of ample size. Usually the best results are obtained from the systems in which the main steam pipe is carried directly to the top of the building, the distributing pipes run from that point, and the radiating surfaces supplied by a down-flowing current of steam.

Pipe sizes should generally be based on a drop in pressure of ¼ pound in 200 feet length of run.

In order to secure the benefit of a sealed return, a "false water-line," so called, is established by the use of a water-line trap. This consists of a constant discharge float trap of large size, mounted at such an elevation as may be necessary to produce the desired depth of water-seal.

The return pipe should be brought into the bottom of the trap instead of the top as is usually the case, and a balance pipe for equalizing the pressure connected with the top.

This pipe should be, if possible, not less than 15 or 20 feet in length and provided with a globe valve near its connection with the heating main.

The reason for this is to allow the space above the water in the trap to become filled with air, after which the valve may be opened just enough to allow the steam pressure to act upon the air cushion in the trap without driving it out. If the steam is allowed to enter the trap, its contact with the cooler return water will cause a rapid condensation, thus producing a partial vacuum within the trap which will often result in draining the entire system of sealed returns, and causing at the same time violent surging and water hammer.

Fig. 1 shows a Curtis trap connected up for use as a water-line trap.

The general method of making the main supply and return connections for an exhaust steam heating system are shown in Fig. 2.

When it becomes necessary to connect an old heating system having small or poorly graded mains and returns with a power plant, different methods must be resorted to, as pressures of 10 pounds or more are often required to produce proper circulation in the coldest weather.

Under these circumstances it is generally necessary to employ one of the so-called vacuum systems by means of which a good circulation of steam can be produced without raising the back pressure on the engine at all, and in many cases the pressure may even be reduced below that of the atmosphere.

One point to be borne in mind in the design of any steam plant, is its simplicity; and, when mechanical appliances such as pumps, traps, automatic valves, etc., can be dispensed with without interfering with the proper working of a plant, this should be done.

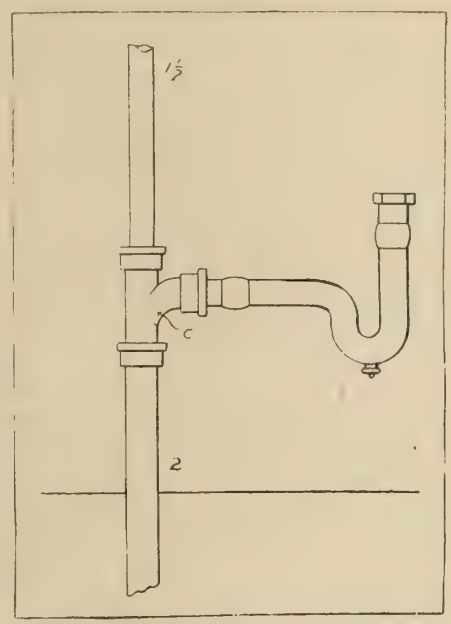

Fig. 2—Method in General Use in the West.

With properly proportioned and well-graded pipes, the pressure required for circulating the steam through a heating system, even of large size, should not exceed 2 pounds. Now, the back pressure of an engine exhausting into the atmosphere is usually about two pounds, so that practically no additional load is put upon the egnine when the exhaust is used in a well-designed heating system; the system simply acts as a large condenser in which condensation takes place under a slight pressure instead of in a vacuum.

We find the increase in boiler pressure required to raise the back pressure from 2 pounds to 5 pounds is only 5 pounds, an amount so small that it can involve no harmful or wasteful results. So far as the efficiency of the radiators is concerned, it makes no difference whether the air is drawn out or forced out, provided that the radiators are steam-filled; and, as the temperature increases with the steam pressure, the heating capacity of a radiator filled with steam under pressure is slightly greater than when steam below atmospheric pressure is used.

Under the pressure system, air valves that are poorly constructed or not well-adjusted, may prevent the radiators from freeing themselves of air. Vacuum systems, on the other hand, employ these or similar devices. It is as necessary in one case as in the other, that the valves be properly adjusted and cared for.

The vacuum system has a large field of its own, and is of much value in cases calling for the special features that it possesses. In modern plants with pipes of ample size, however, it would seem preferable to rely as far as possible upon steam pressure for removing air from radiators, and upon gravity for returning the condensation to the receiving tank rather than to install special mechanical means for accompanying the same results.

CHANGE OF NAME.

The Ontario Lead & Wire Company, Toronto, has announced its change of name to Somerville, Limited. The business will be conducted as before, under the presidency of A. F. Somerville, with no change in the staff or business address. It will be remembered that the company recently disposed of their wire nail and white lead business, with the intention of going into the plumbing supply trade exclusively.

NEW ENAMELWARE CATALOGUE.

The Seamless Steel Bathtub Company, of Detroit, Mich., have just issued their 1907 catalogue, which contains a short description of the plant where the seamless steel bathtub is made, and also contains a number of views of the inside of the works, illustrative of the peculiarly interesting process used by them. The book is a very handsome one indeed and any plumber would do well to write for a copy mentioning this paper.

A LEAD PIPE BUG.

Electric engineers and fire underwriters interested in the Chicago stock yards have become alarmed over the advent of unidentified larvae swarming certain sections of the packing plants, and insisting on feeding upon the lead insulation of electric wires. These brown, hairy little wigglers, each five-eighths of an inch long, are moving through the hoof storage houses at the yards, gnawing irregular patches of lead, often cutting through the cloth and rubber insulation and short-circuiting the electric current. Holes an inch long and half an inch wide have been cut through one-tenth inch thickness of lead pipe. "The lead pipe cinch" bug is the facetious designation given the creature.

PLUMBING PARAGRAPHS.

W. G. Minns is establishing a plumbing shop at 562 College street, Toronto.

A new plumbing shop is being established at 626 Bloor street west, Toronto, by Thomas Mulvihill.

Electrical and Lighting

ELECTRICAL PROGRESS.

More and more is that subtle and powerful natural agency that no man can describe, and that we speak of as electricity, becoming a force that aids in doing the work of the world. Its appliances are so numerous that it would take pages to name them. Its presence in the office and the store for purposes of light or as the motive power for the telephone is so common that it no longer attracts attention. It is rapidly gaining headway in the shops and factories as a source of heat and power. In the modern equipped machine shop here are some of the purposes of power to which it is applied: The automatic oiling devise, magnetic chucks, lifting magnet, relining engine cylinders, whip and hoist, crane, plate planer, bending and straightening machine, shears, flanging machine, head shaper, chain maker, welding machine, portable hammer, portable riveting machine, centering tool, double slotting machine, boring mill, press, multiple drill press, milling machine, tube drilling machine, portable drill, steel saw, grindstone, blollows, blower, fan, boiler tube cleaner.

For heat there are the soldering iron, solder pot, forging soldering iron, tempering of tools, brazers. In the plumbing and tin shops, in steel mills and blast furnaces, in all kinds of factories, electricity is now doing the work once done by steam and still earlier by hand.

NEW ENGLISH GAS MANTLE.

An English writer describes an improved British gas mantle said to be as remarkable as the newly-invented German mantle, which uses a form of copper cellulose impregnated with certain salts. The new English mantle is dipped in a solution of thorium and cerium, in which is added an ingredient called "laddite," which so adds to its strength and life that it has been uninjured after burning two thousand five hundred hours.

ELECTRIC ILLUMINATION.

Never has greater interest been displayed in new methods of electric illumination than during the past year, says the Scientific American. If the promises which are held out by the inventors of metallic filament lamps are fulfilled we may soon see the passing of the carbon filament bulb.

Although the Nernst lamp, on which great hopes were based because it requires only half as much current as the carbon filament, has proved too costly and the Osmium lamp has been found wanting for the same reason and for the additional reason that its voltage of 47 is too low for ordinary circuits, the tantalum and tungsten lamps seem likely successors of the standard incandescent lamp. The tantalum consumes about as much energy as the Osmium lamp, but its long filament renders its use possible on a 110-volt circuit and on circuits of even higher voltage. Its useful life of 400 to 600 hours and its maximum life of 1,000 hours and more compare favorably with those of the best electric incandescent lamps in use. The filament is very delicate but able to stand greater variations in voltage than the carbon filament. When broken the ends readily fuse, so that the tantalum's usefulness, although impaired, is not utterly destroyed. The present low cost of construction (about 50 cents), coupled with its high voltage, give it a decided advantage over the Osmium filament.

Guelcher's iridium lamp is made only for low tensions (24 volts); it consumes it is claimed, only 1 to 1.5 watts per candle power, and costs about 87 cents. What its life may be it is impossible to state, inasmuch as no figures have been published. It is open to many of the objections leveled at the osmium lamp.

More promising is the tungsten lamp, which is now made by four European firms using as many different processes. The normal tungsten lamp of Just and Hanamann seems to give about 30 to 40 candles at 110 volts and consumes 1.1 watts per candle. Kuzel's tungsten lamp is said to show an efficiency of 1 to 1.25 watts per candle for 19 to 32-candle lamps, with a useful life of 1,000 hours, at the end of which the loss in candle power is said to be but 10 or 15 per cent. When broken the filament automatically welds together as in the tantalum lamp. The Osmium tungsten lamps have shown from 54.7 to 55.6 candles and from 1.026 to 1.047 watts per candle at 110 volts.

Whether these new lamps will fulfill the hopes placed in them can of course be determined only by thorough tests under conditions approximating those of actual service. At present the metallic filament lamp is in its experimental stage. The necessity of using the tungsten lamp in the inverted vertical position may perhaps be regarded as a defect; yet quite recently the vertical incandescent gas mantle has invaded an extensive field hitherto monopolized by the electric light.

UNSCIENTIFIC HEATING APPLIANCES.

The elementary principles of such branches of physical science as sound, light and heat have been so universally taught during the last half century, especially since the revival in technical education of the last few years, that one might reasonably imagine it would be impossible now to find up-to-date specialties, of domestic or public utility, which are constructed in flagrant violation of the elementary laws on which the efficiency of such articles depends, says a writer in an exchange, who recently saw a window full of beautiful specimens of the metal workers' art in copper, brass and iron. All were highly finished in various styles and generally, no doubt, in harmony with the purpose in view; but among them were beautifully polished and nickel-plated radiators.

So flagrant a breach of the laws of radiation might pass with a smile were it an isolated case, but judging from the number exhibited in certain quarters the glitter seems to have caught on and the growing anomaly calls for correction.

The use of radiators in various forms is extending so rapidly that it is important for both maker and dealer to understand the elementary laws which tend toward efficiency. Makers and fitters alike will be forwarding their own best interests by leading clients in this matter. Clients look to the trade for efficient service from the apparatus applied. Let them know that radiation and polish are antagonistic; that a rough, unpolished surface is the best radiator, and that a smooth, bright surface is the very worst. Every stroke of labor put upon a radiator in the direction of polish is money spent in destroying its heating power. A polished, plated surface will not give one-third the radiant heat which is given from the same radiator in the rough, thinly coated with a flatted color.

A simple way of testing this is to place a thermometer at a given distance from an urn full of boiling water. Take the temperature first from the polished side, and afterward from the other, which should be coated with whiting or lampblack; the difference will convince the skeptic. How often has one touched a hot polished surface and got burnt because it gave no warning by radiation.

An instance of misuse of the science of heat on the opposite extreme of application is seen in the cheap, single-cased gas cookers now so extensively used. Here the object should be to conserve the heat within the cooker, allowing none to escape by radiation, instead of which the outer sides of the cooker are specially adapted for efficient radiation, thus throwing away heat which should be helping the cooking, and causing discomfort by heating a room which is required to be as cool as possible.

NEW PLUMBERS' TEXT-BOOK.

The announcement has been made that the series of articles written by J. J. Crosgrove and published in "Modern Sanitation" during the past two years, are to be published in book form as a text book for plumbers, architects, sanitary engineers, technical institutes, and plumbing inspectors. The articles have excited a great deal of interest amongst the trade and many requests have been made for their permanent publication. This has now been decided upon by the Standard Sanitary Manufacturing Company, publishers of "Modern Sanitation," they being careful to state that the publlcation of the book is not intended to be in any wav an advertisement for the publishers, their only object being to advocate the advancement of plumbing and sanitation along the most modern and approved lines. In order to have the first edition large enough to supply the demand the publishers are asking for advance orders. Publication will be commenced at once and Canadian plumbers who have not already ordered are urged to send their names at once to The MacLean Publishing Company, Toronto. The price of the book will be $3, and will comprise about 400 pages, on enameled book paper, profusely illustrated, thoroughly indexed and handsomely bound in cloth, with gilt edges.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, January 25, 1907

There are no changes in prices this week, all lines remaining very firm.

Jobbers report that orders are now coming in from their travelers, and that general business conditions seem to be very good throughout the province of Quebec. No trouble is being experienced with collections; merchants all over the province seeming to share in the general prosperity.

Owing to the difficulty in getting delivery of some lines, building operations in Montreal are not progressing as rapidly as some contractors would like it, but on the whole there seems nothing to complain of and everybody is expecting a banner year in plumbing goods.

RANGE BOILERS—Prices remain the same, but there will likely be another advance shortly on the copper article, if the present shortage of copper continues. Our prices at present are: Iron clad, 30 gallon, $5; 40 gallon, $6.50 net list. Copper, 30 gallon, $33; 35 gallon, $38; 40 gallon, $43; 45 gallon, $50; 50 gallon, $58; 60 gallon, $68; 70 gallon, $80; 80 gallon, $95; 90 gallon, $115; 100 gallon, $150 net.

LEAD PIPE—Remains firm. We still quote 5 per cent. discount f.o.b. Montreal, Toronto, St. John, N.B., Halifax: f.o.b., London, 15c per hundred lbs extra; f.o.b. Hamilton, 10c per hundred lbs. extra.

IRON PIPE FITTINGS—A very brisk business is being done at the same figures. We still quote: Discounts on nipples, ¼ inch to 3 inch, 75 per cent., 3½ inch to 2 inch, 55 per cent.

IRON PIPE — The recent advance is still maintained and some sizes are reported short. We quote: Standard pipe in lots of 100 feet, regular lengths, ¼ inch, $5.50; ⅜ inch, $5.50; ½ inch, $8.50; ¾ inch, 11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.50, discounts on black pipe, ¼ inch, 59 per cent.; ⅜ in. 59 per cent.; ½ in. 68; ¾ to 2, 70. Discounts on galvanized pipe: ¼ inch, 44 per cent.; ⅜ inch, 44 per cent.; ½ inch, 58 per cent.; ¾ to 2 inch, 60 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12; 3-4 inch, $15; 1 inch, $22; 1 1-4 inches, $30; 1 1-2 inches, $36; 2 inches, $50. The discounts on black pipe, ¼ inch, 74 per cent.; ⅜ inch, 69 per cent.; ½ inch to 2 inches, 68 per cent. Galvanized, ¼ inch, 59 per cent.; ⅜ inch, 69 per cent.; ½ to 2 inches 58 per cent.

SOIL PIPE AND FITTINGS—Our prices remain as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER—Prices remain the same: Bar solder, half-and-half, guaranteed 25c.; No. 2 wiping solder, 22c.

ENAMELWARE — Recent advance on Canadian ware still holds. We quote: Canadian baths, see Jan. 3 1907 list. Lavatories, discounts, 1st quality, 30 per cent.; special, 30 and 10 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special, $2.45.

AN EASY QUESTION.

Send in a reply to the question by March 1, and take a chance after the valuable prize offered.

If a customer asked the following question: "What are the advantages of hot water heating over steam heating in a private residence?" what arguments would you use in reply? Also outline what advantages steam heating possesses over water for this same class of work.

* * *

The above is the third of a series of questions Hardware and Metal is asking the trade in Canada to answer. Some interesting replies were received to the preceding questions and the simplicity of the above should encourage a large number of replies, the publication of which should be helpful to readers of this paper who engage in heating work.

For the best reply we offer a clothbound copy of J. J. Cosgrove's splendid text-book "Principles and Practice of Plumbing."

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, January 25, 1907

With no price changes during the week there is little to report other than that travelers are on the road and getting fair business. Plumbers, like other business men, are getting more in the habit of placing their orders well ahead in order to get deliveries promptly. Building is going on actively and some good orders are being placed—one Galt job for which supplies have just been ordered, is for nineteen tubs, closets, laundry tubs, etc., and 38 lavatories.

Jobbers are well satisfied with collections and are looking for a good Spring trade. Pipe supplies are still low, but skelp is said to be easier to procure. A shortage is looked for, however, in the Spring when big orders are placed.

LEAD PIPE — The discount on lead pipe continues at 5 per cent. off the list price of 7c. per pound. Lead waste, 8c. per pound with 5 off. Caulking lead 5 3-4c. to 6c. per pound. Traps and bends, 40 per cent., discount.

SOIL PIPE AND FITTINGS — Recent advances are held to firmly with demand seasonable. Medium and extra heavy pipe and fittings, 60 per cent.; light pipe 50 per cent.; light fittings, 50 and 10 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

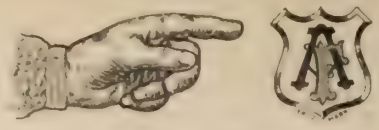
IRON PIPE.—We are revising last week's figures on large sizes. One-inch black pipe is quoted at $4.95, and one-inch galvanized at $6.60. Full list in current market quotations.

IRON PIPE FITTINGS—Cast iron fittings show several advances. Cast iron elbows, tees, crosses, etc., 60 per cent.; cast iron plugs and bushings, 60 per cent.; flange unions, 60 per cent.; nipples, 60 and 10 per cent.; iron cocks, 55 and 5 per cent.; Canadian malleable, 30 per cent.; malleable unions, 55 and 5 per cent.; malleable bushings, 55 per cent.; cast iron ceiling plates, plain 65 per cent.; cast iron floor, 70 per cent.; hook plates, 60 per cent.; expansion plates, 65 per cent.; headers, 60 per cent, hangers, 65 per cent.; standard list.

RANGE BOILERS—An advance of 25 cents has been made on all sizes of galvanized iron and we now quote: Galvanized iron, 30 gallon, standard, $5; extra heavy, $7.75; 35 gallon, standard, $6; extra heavy, $8.75; 40 gallon, standard, $7; 40 gallon, extra heavy, $9.75, net list. Copper range boilers—New lists quote: 30 gallon, $33; 35 gallon, $38; 40 gallon, $43. Discounts 5 to 15 per cent.

RADIATORS—Prices are very stiff at: Hct water, 47½ per cent.; steam, 50 per cent.; wall radiators, 45 per cent.; specials, 45 per cent. Hot water boilers are unchanged.

SOLDER — Quotations remain firm as follows: Bar solder, half-and-half, guaranteed, 27c.; wiping, 23c.

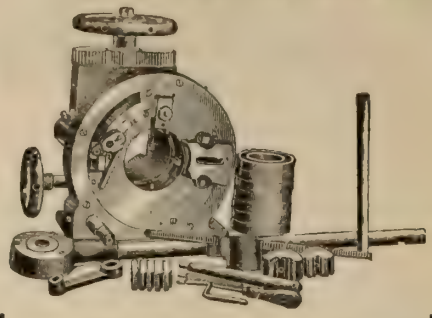


ENAMELWARE—New lists on enameled baths issued by the Standard Ideal Company on Jan. 3, show a 10 per cent. advance. Lavatories, first quality, 20 and 5 to 20 and 10 off; special, 20 and 10 to 30 and 2½ per cent. discount. Kitchen sinks, plate 300, firsts 60 and 10 off; specials, 65 and 5 per cent. Urinals and range closets, 15 off. Fittings extra.

THE NEW
"SOLID-ADJUSTABLE"
HAND STOCK AND DIES

At prices that will warrant your inquiries.

I. E. SHANTZ & CO.
BERLIN, - ONTARIO
Selling Agents for Canada



This is the Mark that Means Something

It is the distinctive brand of genuine Armstrong Stocks and Die and Pipe Fitters' Tools.
No "Armstrong pattern" or "just as good as Armstrong" have this stamp. Don't buy anything in this line that hasn't this brand as it is the mark of genuineness.

THE ARMSTRONG MANUFACTURING CO.
292 Knowlton Street, Bridgeport, Conn.

A Certain Sense of Satisfaction

goes with every MERRELL PORTABLE HAND MACHINE, PIPE THREADING and CUTTING MACHINE. We build them that way.

For doing ALL kinds of threading—under ALL conditions—labor trouble and faulty material included—where speed, durability and ease of control count for something, our word to you is to investigate the MERRELL.

Whether it be stationary or portable—hand or power driven—30 DAYS FREE TRIAL must prove conclusively that your choice should be the MERRELL.

This Portable Hand Machine has encased gears, MERRELL standard quick opening and closing die-head, and the latest improved Cutting-off Knife.

Let us tell you more about this machine—The Chasers, Vise and the large range of work covered.

Catalogue for the asking.
Quick shipments.

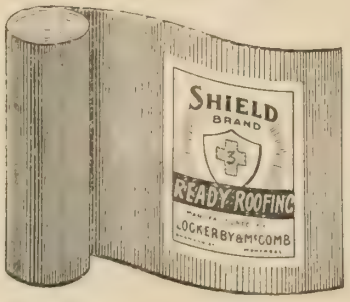
Hardware and Plumber—

We have pumps suitable to any demand made upon you by most exacting customers.

Our pumps will do anything that a pump can do, and we will be pleased to give the benefit of many years' experience to any one having pump troubles.

McDougall Pumps are Standard Pumps, and with us it is quality first, last and always, while we ask just as little money as we can get along with.



We have a few catalogues for distribution

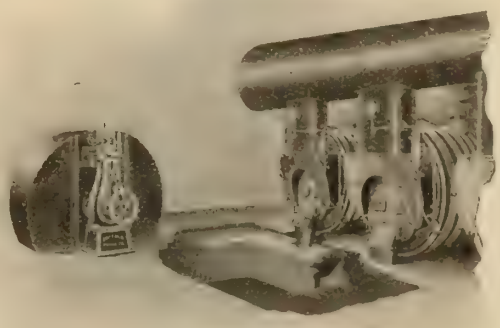
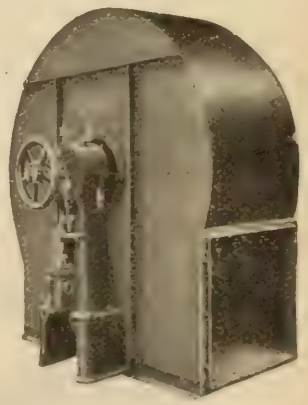
Mechanical Draft



An application of fans for securing the highest efficiency of fuel and the greatest steaming capacity of boilers—Fiske.

THERE is nothing new or irrational about Mechanical Draft—It dates back from the first use of bellows, and is best appreciated in the latest and largest power plants.



Buffalo Electric "B" Volume Exhauster

MECHANICAL DRAFT means a positive control over your boilers. No dependence on weather conditions. No fixed limit to boiler capacity. Quick response to demands for steam.

A typical Buffalo Induced Draft Plant.

Left Hand Bottom Horizontal Discharge Fan with Cylinder below shaft engine.

MECHANICAL DRAFT means no tall, expensive chimneys. Perfect combustion of low-grade fuels. Realizes, in connection with fuel economizers, the highest possible boiler efficiency.

MECHANICAL DRAFT has long ceased to be an experiment, but is well defined and accepted engineering practice. The best results are only possible when installations are designed and executed by specialists in this service. Bring your draft problems to us.

CURRENT MARKET QUOTATIONS.

Jan 25, 1907.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

EVAPORATION REDUCED TO A MINIMUM

is one of the reasons why PATERSON'S WIRE EDGED READY ROOFING will last longer than any other kind made.

Mr. C. R. Decker, Chesterfield, Ont., used our 3 Ply Wire Edged Ready Roofing fourteen years ago, and he says it is apparently just as good as when first put on.

We have hundreds of other customers whose experience has been similar to Mr. Decker's.

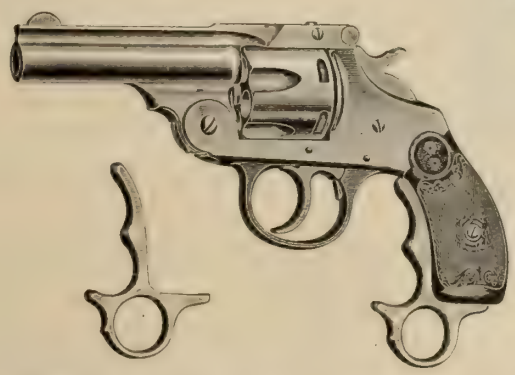
SAFE REVOLVERS



SAFETY HAMMER REVOLVERS
.22, .32, .38 Calibres

SAFETY HAMMERLESS REVOLVERS
.22, .32, .38 Calibres

Iver Johnson's grip can be furnished on these Revolvers at an extra charge.

No article should be selected with more care than a Revolver.

For defence it must be sure and reliable.

For safety it must be so constructed that it will not "Fire" at the wrong time.

Dealers handling Iver Johnson Revolvers know that each of these weapons is absolutely safe. Accidental discharge is impossible.

THIS IS WORTH CONSIDERING

With these safety features the cost is no greater than for Revolvers without them.

PERFECT AXE

Another Axe that is a good-looker is the Perfect. It is like the All Steel Full Polished, with, in addition, the Phantom Bevil painted red. This Bevil by some makers is produced by a drop hammer, which spoils the shape of the axe to a certain extent. We grind it out, which, though it costs more, produces a much better effect and leaves the axe full where fullness is an advantage for bursting a chip, yet our price is not higher. It pays to get our line every time.

The Dundas Axe Works

To be continued.

DUNDAS, ONT.

Four Reasons why INVICTUS FIBRE is the BEST FIBRE PAPER on the Market

1. Invictus Fibre is made from personally selected pulp wood cut on our own limits.
2. This special pulp wood is again rigidly culled on arrival at our mills
3. The pulp from which Invictus Fibre is made is manufactured in our own pulp mill and transferred at once to the paper mill, avoiding all drawbacks of transportation.
4. Invictus Fibre will increase in strength and not grow hard and brittle as does fibre made from sulphite pulp. This is a quality of the peculiar and selected pulp from which Invictus Fibre is made.

A trial order will convince you that we are correct. See that each package bears the words "Invictus Fibre." Every ream contains 480 sheets

Business Getters for Tinsmiths

Are there any defective chimneys in your locality?

Then it is your chance to get business.

THE

ZEPHYR Ventilator

saves the expense of building a high chimney.

It is so constructed as to guarantee a perfect draft and, therefore, easy combustion.

By using the ZEPHYR it is possible to burn soft coal with the best results.

The smoke is easily drawn off, enabling an even heat to be generated.

THE ZEPHYR IS STRONGLY PUT UP AND WILL RESIST ANY STORM

This is what others think of it:

Montreal, February 20th, 1901.

Messrs. HARRIS Co., Montreal. Providence Mother House.

Dear Sirs,

It is with pleasure that I can say that your "AEOLIAN" Ventilator is the best ventilator we have used on our establishment so far. We had eight (8) of the large sizes put up on our Mother House and on the Hospice Gamelin, and they gave us entire satisfaction.

Yours respectfully, SISTER MADELEINE, Dep.

We manufacture and guarantee

Peerless Woven Wire Fence

Here is a fence that will sell. Once up no need for repairs. It lasts for years—just what you are looking for. It's horse-high, pig-tight and bull-strong. No stock can get over, under or through it. The most unruly animal can't butt it down and there are no barbs to tear and injure stock. It's

WIND AND WEATHER PROOF

The Peerless lock holds it perfectly rigid and the wires can't slip up, down, nor sidewise. Cold weather won't snap it and hot weather won't make it sag. It's the greatest thing out for farmers, stockmen and all other fence users which makes it a red hot proposition for dealers. It comes in rolls all ready to put up. It's easy to handle. Write for prices.

Matters of Mutual Interest

Some Shop Talk Interesting Alike to Publishers and Subscribers.

The value of the trade newspaper has been emphasized in the agitation going on against the proposed parcels post legislation. Without a live trade press the retailers would have been kept in ignorance of the blow which was being aimed at retail merchandizing. The daily newspapers evidently consider the interests of their mail order advertisers paramount and those of their thousands of retailer subscribers of secondary importance. Not only would the parcels post express service hit the retailer but it would also do injury to the jobbing and manufacturing interests, as the big mail order corporations largely ignore the jobber and, where possible, do their own manufacturing or control the output of subsidiary factories. Manufacturers, wholesalers and retailers all have their trade associations, but the connecting link is the trade newspaper which, while not controlled by any branch of the trade, realizes fully that the retail trade is the one section upon whose success or failure all other branches depend.

A Big Advertising Contract.

Trade paper publicity is more and more regarded as a factor of permanent value in marketing, and while it is not yet common practice to do so, it is by no means unusual for manufacturers to anticipate their publicity needs as they do their requirements in raw materials, and contract in advance for a supply sufficient for two or three and sometimes five years' consumption.

A recent and notable case of this kind is that of the Oneida Community which has contracted with the Jewelers' Circular-Weekly, for one page in a special position in every issue for five years, at a yearly rate of $5,300. This will be in addition to space in another part of the paper which will cost about $1,000 more per year, making a total of $31,500.

It is particularly interesting to note that this contract, which is said to be the largest ever given to a commercial trade paper, was not sought by the publisher and, therefore, was not secured through the strong personal solicitation which sometimes over-persuades the advertiser.

Spring Special Number.

Active preparations are being made for the annual spring number of Hardware and Metal, to be issued on March 23 next, and it is safe to say that the 1907 issue will be even more interesting than any previous number. This is promising a great deal, as L. J. A. Surveyer, one of Montreal's most successful merchants, on April 11 last wrote:

"I take the liberty to write and congratulate you for the splendid spring number of Hardware and Metal we received last week. For some months past we have noticed a marked improvement in your paper, but this spring edition is the finest and has surpassed any other hardware publication we know of. Hardware and Metal is always interesting to read and also instructive, and we all read it from cover to cover."

In the reading matter a resume will be given of the progress of the past year and a comparison made of the most important market changes. The departments devoted to "The Merchant and His Store," "How Publicity Helps Selling," "With the Men Who Sell," "About Goods Hardwaremen Handle," will be as practical, authoritative and educative as it is possible to make them, and the whole issue will be one which the trade will look for and keep for reference after it has been published.

As in 1906 all advertising will be kept before and after the reading matter, the general appearance of the number having been greatly improved by the change. Practically every representative manufacturing and jobbing firm doing business with the hardware and kindred trades in Canada will have interesting announcements to make regarding their 1907 goods, and the advertising pages will be read with interest by every retail buyer.

How Travelers Help.

Freeman W. Davis, one of the Ontario traveling salesmen for Sanderson Pearcy & Co., when forwarding an interesting item of news recently, said: "I think it is a traveler's duty to forward any suggestions of this kind to our trade paper, as well as selling goods." Mr. Davis drew attention to the plan of blacklisting deadbeats that many Ontario merchants have adopted. The matter was treated editorially, thanks to Mr. Davis' suggestion. Anything which helps to make the retailer's financial position stronger will help the manufacturer and jobber. Mr. Davis recognizes this and realizes that the trade paper is the connecting link binding together the different branches of the trade.

J. H. Lyons, Ontario sales representative for M. & L. Samuel, Benjamin & Co., Toronto, drew our attention to a rising stove foundry only recently established, and, like many other travelers, supplied us with some good items of news.

W. L. Lambert, who has been out selling "Automobile" and "Cycle" skates for the Canada Cycle & Motor Co., Toronto Junction, traveled with our circulation man for a few hours and in conversation said he could be quoted as saying that he placed Hardware and Metal first as an advertising medium in Canada for sporting goods. Mr. Lambert said that his office had been in receipt of numerous requests for their "Three-in-one" pictorial hanger as a result of a brief notice in Hardware and Metal.

Clerk Makes Good Suggestion.

D. G. Ross, a Winnipeg clerk, who has sent in able replies to the questions asked in our plumbing department, says he has profited greatly by these questions, not only in trying to solve them but by reading the opinions of others. He is however, more interested in hardware than plumbing, and suggests the establishment of a column devoted to such questions, say once a month, which would benefit and interest the hardware clerk.

"There are hundreds of clerks," writes Mr. Ross, "who do not read any trade paper, in fact I have worked in houses where not one of the employes thought of reading or subscribing to any trade journal. Now I would suggest that this matter be taken up and every clerk worthy of the name equipped with Hardware and Metal. Let it be his lesson book from which he learns something each week. If knowledge is power we want that knowledge, for is it not the man who carries the most trade knowledge and uses it, who is most fitted for the best job, and draws the biggest salary. Then let our trade journal be the source through which we obtain that knowledge. I venture to say too that if hardware dealers recognized the trade journal as the best advertising medium for clerks, etc., it would be to their own advantage as well as that of the clerk."

Mr. Ross' suggestion of a column for questions by clerks is a good one, and we invite the men behind the counter to forward their queries for information. Let Mr. Ross lead off and the column will be started. Initials only will be printed, but it is advisable that the name of the writer should be signed to each communication.

Britishers Watching Canada.

Word comes from our London office that there is an ever-increasing demand for copies of Hardware and Metal, occasioned, no doubt, by the growing interest of Britishers in the growth and development of Canada. Many of these enquiries are from manufacturers and merchants who apply for copies in their own names, and numerous copies are supplied to unknown enquirers through book-stalls and news agents. Our London manager states that the secretaries of some of the most important exchanges and commercial rooms in Great Britain are subscribing for the paper for the benefit of members, and in this way our connection with the old land is extending more widely than we can estimate. This is a point to be remembered by those who wish to establish a connection amongst Old Country houses. Many copies are enquired for by manufacturers, who hope to obtain from our pages the names of possible representatives.

Two Recent Commendations.

Bent & Cahoon, North Sydney, N.S., who call themselves by the English term "ironmongers," wrote last month: "We have been reading your paper for 19 years and look upon it as an old chum."

Magladery Bros., New Liskeard, Ont., also sent the following self-explanatory letter: "Kindly send our Hardware and Metal to our address at New Liskeard instead of to Parkhill as formerly. We have purchased the hardware business of S. Eplett here and we sure want Hardware and Metal. It helped to make our Parkhill business the success that it was and we want it to do us another good turn."

AMONGST THE SALESMEN

LONDON TRAVELERS' SOCIAL SIDE.

The Travelers' Club of London is a social organization. London is also the headquarters of the Western Ontario Commercial Travelers' Association, which is business from the drop of the hat, but those members of the association who are members of the club, cast aside all business cares when they enter the club-rooms even from the drop of the hat on the club hat-rack. "Hang hats. Hang care," might be their thought. They have a large clubhouse on Richmond St., and have a good time there all the time. Sometimes they let their friends know what good fellows they are. They are not so very clannish. They can mingle some and when they undertake the part of hosts there is no lack of guests.

H. N. Lind — G. H. Detlor, 2nd Vice-President — C. M. McGuire, President — J. S. Townsend, 1st Vice-President

J. J. Harkness — A. H. Brener — H. E. Buttrey — F. Fisher, Treasurer

Three weeks ago Al. Davis, who travels for the Carling Brewing & Malting Co., had in charge a social evening at the club, when refreshments were served and a delightful programme of music presented. Over two hundred attended. More recently the club entertained twice that number of guests and the event was pronounced to be the most successful social function of the season there. On this occasion a ball, such as the club gives annually, was held in the City Hall with the Masonic Temple used as an annex. All arrangements had been perfected to the slightest detail. The decorating of the hall was done by Messrs. A. Screaton & Co., and they are not likely to suffer any loss of business in consequence of credit being given where credit is due. Satisfactory music was supplied by an orchestra of twelve pieces under the direction of Tony Cortese and I do not know the name of the caterer who had charge of the midnight supper in the banqueting hall of the Masonic Temple, but he deserves credit, too. As for the work of the various committees who had charge of the affair it may have been hard or it may have been easy, but the result entitles them to an increase in popularity.

Mr. Fred S. Fisher was the honorary chairman, while Mr. H. W. Lind was the secretary. The conveners of the various committees were:

Finance—J. S. Townsend.
Reception—J. M. Ferguson.
Decoration—A. Tillmann.
Accommodation and halls—S. F. Glass.
Refreshment—J. A. Carling.
Printing—H. C. McBride.
Music and programme—J. J. Harkness.

The lady patronesses were: Mrs. Adam Beck, Mrs. Jeffrey Hale, Mrs. Charles S. Hyman, Mrs. H. W. Lind, Mrs. Arthur Little, Mrs. R. C. Macfie, Mrs. H. C. McBride, Mrs. C. W. McGuire, Mrs. Edwin Paull, Mrs. E. B. Smith, Mrs. E. R. C. Struthers, and Mrs. A. Tillmann.

The stewards were: James A. Angus, R. Arkell, Dr. A. V. Becher, J. M. Ferguson, George S. Gibbons, A. O. Graydon, A. F. Kerrigan, F. J. Lind, A. M. Masuret, C. Mathewson, A. H. Moran, Dr. A. Scott, W. Wright, A. Zimmerman.

Three-fourths of the officers of the Travelers' Club of London are Mystic Shriners, members of Rameses Temple. They are: H. E. Buttrey, Donald Ferguson, C. W. McGuire, Geo. Detlor, J. J. Harkness, A. H. Brener, L. C. Johnston, H. W. Lind and T. W. Edwards.

At the adjourned annual meeting of the Travelers' Club of London, Jan. 12, Vice-president J. S. Townsend was presented with a set of silverware and cutlery of 51 pieces as a token of the club's regard for him.

• • •

Donald Ferguson, manager of the Ferguson Lumber Company and president of the Maple Leaf Automobile & Electric Company, was for three years a director of the Western Ontario Commercial Travelers' Association. He is an ardent horseman and has for several years been prominent in promoting the interests of the London Turf Association.

ISLANDERS GETTING AHEAD.

Writing from St. John's, Newfoundland, E. D. Arnaud, Canadian Commercial Agent, says: "A western correspondent of a local newspaper reports that travellers representing St. John's firms, are gradually supplanting the travellers for Canadian houses in that part of the colony where they formerly came in considerable numbers, and have captured the bulk of the trade. This it is now asserted is being lost to Canada in consequence of the enterprise displayed by several firms in this city, and the energetic work done by their representatives in the field."

MARITIME DEALERS ORGANIZE.

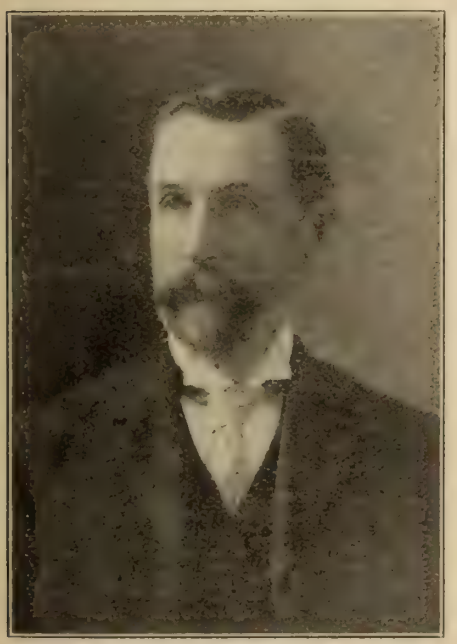
For some time there has been a quiet movement going on in Nova Scotia and last week it culminated in the formation of the Nova Scotia Retail Hardware Association, with about two dozen of the best retail houses in the province as members.

Further particulars will be given next week. In the meantime we extend our congratulations.

GAS AT 36 CENTS.

The Paul Automatic Gas Co., Montreal, has been incorporated, with a stated capital of $145,000, to manufacture a machine to generate gasoline gas in a most economical way.

The company claims that 2 gallons of gasoline will produce 1,000 feet of a most brilliant gas, which is superior for light, heating or cooking, to ordinary gas, or that produced by any other machine, at a cost of only 36 cents per thousand cubic feet. They also claim that this machine is perfectly safe, and insurance companies recognizing this fact, have permitted its installation without extra charge.



The company have quarters at 965 St. Catherine street east, Montreal, and will be glad to send interested parties who will mention this paper when writing, a booklet containing full information regarding their machine.

PUBLIC SPIRITED HARDWARE MERCHANTS

NO. 7

Last December the city of Regina elected by acclamation to the office of mayor one of her best known and most highly respected business men, J. W. Smith. Mr. Smith is an old hardwareman, head of the firm of Smith & Ferguson, which has recently been bought out by the Western Hardware Co., of Regina, and as such he has a wide acquaintance among the hardware trade.

Although a busy business man who has in recent years built up one of the biggest hardware trades in the west, Mr. Smith has always found time to take an active interest in municipal politics, and the citizens of Regina were making no experiment when they elected him mayor by acclamation a few weeks ago.

J. W. SMITH
Mayor of Regina.

In 1884 Mr. Smith was elected to the first municipal council that Regina ever had, and from that date to 1904 he was almost continuously a member of the council or the school board. He was mayor in 1889 at the time of a hot dispute between the city and the trustees of the Town Site Company as to the amount of taxes due by the latter. So well satisfied were the citizens of Regina with the way in which Mr. Smith handled this question that at the close of his term he was offered re-election by acclamation. The honor was declined as Mr. Smith could not spare the time from his business that year.

In 1902 the Board of Trade—of which Mr. Smith was then president—decided that a new and progressive policy was urgently required by the city and requested Mr. Smith to stand for mayor in order that the new policy might be carried into effect. He was elected and occupied the mayor's chair during 1902 and 1903, and during his term of office Regina was incorporated as a city and the water works contract was made.

Last December Mr. Smith was again urged to accept a nomination and he was honored with an election by acclamation. A business man is urgently required at the helm of the civic ship of state as the city is now to work under a new charter, a feature of which is a provision for the introduction of the ward system.

Regina is growing fast and provision must needs be made for a city many times its present size. A far-sighted business man is the sort of mayor required in this growing time and Regina is fortunate in having secured the services of J. W. Smith.

BIG BUSINESS CHANGE.

On Jan. 15 the Smith & Ferguson Company, of Regina, Sask., turned over their business to Peart Bros., who have been doing business in Regina under the name of the Western Hardware Company, the price paid for the premises, stock and goodwill being about $125,000. J. W. Smith, the owner of the Smith & Ferguson business, will continue his coal business. The land and building occupied a site 54 x 175 feet, and was figured as worth $60,000, the stock being expected to figure at $65,000. The new owners have also leased the old company's warehouse with an option on purchasing. They still have the big warehouse erected by the Western Hardware Company during the past year. Since the fire which burned the Western Hardware Block several months ago business has been transacted in the Donohue Block, but this store will be closed out and all the trade carried on in the newly purchased store.

The Regina Standard says: "Peart Brothers are among the most successful young business men in the city. T. W. Peart came here just ten years ago from his home in St. Mary's, Ont., to take a position with the Smith & Ferguson Co. After remaining in the employ of that firm for six years he started in business on his own account four years ago and has been trading since under the name of the Western Hardware Co., building up an important and valuable business in a comparatively short space of time." The other member of the firm is Milton Peart, who joined his brother in the Regina enterprise several years ago. Another brother is J. Walton Peart, manager of the St. Mary's Hardware Company, and a leading member of the Ontario Retail Hardware Association, he also having an interest in the Regina enterprise.

CONTRACT AWARDED.

The contract for plumbing and heating appliances, in the Government immigration home, in Toronto, has been awarded to J. Armstrong, Toronto, the price being $1,998.

OUR LETTER BOX

Correspondence on matters of interest to the hardware trade is solicited. Manufacturers, jobbers, retailers and clerks are urged to express their opinions on matters under discussion.

Any questions asked will be promptly answered. Do you want to buy anything, want some shelving, a silent salesman, any special line of goods, anything in connection with the hardware trade? Ask us. We'll supply the necessary information.

Furnace for Fuel Oil.

The Ontario Nickel Co., Worthington, Ont., desire to secure a Canadian made furnace in which fuel oil can be burned.

Answer.—Vanzant & Fairl, Petrolea, have a furnace of this kind, and another is being manufactured in the Welland district about which we have been unable to learn very much. Can any reader supply the desired information? —Editor.

Book on Window Dressing.

A clerk who reads Hardware and Metal wants to secure a book on window dressing, particularly adapted to the hardware trade. There is no book or magazine making a specialty of hardware windows. "The American Hardware Store," price $3, and sold in Canada by the MacLean Pub. Co., Toronto, is the nearest we can suggest.—Editor.

U. S. Duties on Binder Twine.

"A Subscriber" asks: "What is the duty, if any, payable on binder twine, 650 feet per lb., going into the United States from Canada? Has any change been made recently?"

Answer.—The only definite source of information in reference to the U. S. tariff is from the Treasury Department. The U. S. consul at Toronto states unofficially that on manilla twine there is a duty of 45 per cent., and roughly speaking all other twine is free. There is, however, a regulation that all twine over 600 feet in length is dutiable. While the general U. S. tariff has been unchanged for many years there have been several changes in the regulations. —Editor.

Cobbler's Outfits.

A. McBride & Co., Calgary, Alta., asks for the name of the manufacturers of the Economy Cobbler's Outfit.

Answer.—Root Bros. & Co., Plymouth, Ohio, make the line referred to.—Editor.

ELECTRICAL CONTRACTORS MEET

The regular meeting of the Electrical Contractors' Association of the Province of Quebec was held at Montreal on Thursday, the 24th ult., when the following officers were elected for the coming year: President, J. E. Scott, representative to Builders' Exchange, E. W. Sayer; secretary, J. H. Lauer; Executive Committee, W. B. Shaw, F. J. Parsons, D. McQuaid, N. Simoneau, R. Moncel, W. J. O'Leary and James Bennett.

It was decided at this meeting to hold the annual banquet on Feb. 6.

Retail Hardware Association News

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding Association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

Officers Retail Hardware and Stove Dealers' Association of Western Canada:

President—A. J. Falconer, Deloraine.
First Vice-President—J. B. Curran, Brandon.
Second Vice-President—W. M. Gordon, Winnipeg.
Secretary-Treasurer—J. E. McRobie, Winnipeg.
Executive—Alberta, A. E. Clements, Olds; C. F. Comer, Calgary. A. R. Auger, Okotoks.
Manitoba—H. S. Price, Bousseveain; A. P. Macdonald, Winnipeg; O. Gilmer, Winnipeg.
Saskatchewan—G. K. Smith, Moose Jaw; S. A. Clark, Saskatoon; J. R. Fox, Weyburn.
Officers Western Board (elected by general merchants and hardwaremen in joint session). President, W. G. McLaren, Souris, Man., vice-president, G. K. Smith, Moose Jaw, Sask.; H. C. Hamelin, Winnipeg, Man.; secretary, W. A. Coulson, Winnipeg, Man.; treasurer, J. E. McRobie, Winnipeg, Man.; auditor, J. A. Lindsay, Winnipeg, Man.
Association offices, 53 Scott building, Main street, Winnipeg.

Officers Ontario Retail Hardware and Stove Dealers' Association:

President—A. W. Humphries, Parkhill.
1st Vice-President—W. G. Scott, Mount Forest.
2nd Vice-President—J. R. Hambly, Barrie.
Treasurer—John Caslor, Toronto.
Secretary—Weston Wrigley, 10 Front St. East, Toronto.
Executive Committee—The officers and J. W. Peart, St. Marys; M. R. Marshall, Dunnville; D. Brocklebank, Arthur; F. W. Jeffery, Midland; E. P. Paulin, Goderich, and Frank Taylor, Carleton Place.
Auditors—J. W. Peacock and C. F. Moorhouse, Toronto.

WESTERN CONVENTION.

The Western Retail Hardware Association will hold their annual meeeting in the Association's board room in the Scott Building, Winnipeg, on Tuesday, February 12th. Notices have been sent to the trade notifying them of the meeting and a big attendance is expected. The meeting is being held during the Bonspiel week, and consequently the visiting dealers will have the advantage of special railway rates. Important business will come up for discussion and a good attendance is expected and desired.

A WEAK OBJECTION.

In a letter written to a St. Catharines hardwareman, E. A. Lancaster, M.P., states that he appreciates the position of retail merchants on the parcels post matter but argues that the measure would be for the benefit of the great majority of the people as an attack on the monopoly of the express companies and the exorbitant rates charged by them.

The objection he makes is a weak one, as if he or any section of the people desire to attack the monopoly of the express companies and reduce the exorbitant rates they are said to be charging, the proper method to adopt is to bring the matter before the Railway Commission or introduce legislation to rearrange and make more equitable the said express rates. Instead of doing this, Mr. Lancaster's argument is that the express companies should be gotten after in a roundabout way through the postal department, by means of legislation which would benefit a few wealthier departmental store merchants at the expense of thousands of retailers scattered throughout the country..

The Parcels Post Collections system would not benefit the farmers in any way, as they would have to pay the same charges for their mail order purchases as at the present time, plus the c. o. d. collection charges. On the other hand, the proposed legislation would injure the farmer very materially by putting out of business numerous stores in the smaller towns and villages, reducing the number of purchasers of farm products and lessening the value of real estate in business centres, besides having a similar effect upon the real estate in the farming districts. The most intelligent farmers look forward to their home life being made less isolated by the extension of the electric railways, farm telephone systems, etc., and by the small country towns being made educational and amusement centres for the farmer and his family. The proposed legislation will work against this ideal and make it farther from realization, as it will tend to centralize wealth more and more in the hands of the multi-millionaires in the larger cities.

Mr. Lancaster is an able advocate of the farmer's position, anl as he promises to try and prevent any injustice being done the smaller local merchants for the benefit of the few large monopolistic departmental stores in the large centres, it is hoped that he will see the justice of the agitation against the parcels post c.o.d. collections system.

QUESTIONS FOR DISCUSSION.

Very few dealers have forwarded to the secretary of the Ontario Association questions on trade matters for discussion at the annual convention on Good Friday next.

What is wanted is short, terse questions from dealers who have been puzzled at times as to how best to advertise, to sell or to buy, what new lines to take up, how to keep and get the best results from clerks, tinsmiths or other employes, what new bookkeeping appliances or store fixtures have given the best results, and similar subjects, a discussion of which would prove helpful to every hardware merchant.

Think over some question you would like discussed and forward it to the secretary at 10 Front street east, Toronto, at once.

The question box feature of the convention offers possibilities of great value to every one attending. Everyone present at the May convention will remember then was that the discussion was brought out by Mr. Brocklebank's query about oil storage tanks. The only difficulty then was that the discussion was brought on just before adjournment, but this will be remedied at the Good Friday convention.

Send in the questions.

PEDDLERS' COMPETITION.

A Washington judge has decided that the law licensing peddlers is unconstitutional, and the general trend of legal opinion seems to be along the same line. A careful study of the lay of the land will afford many a merchant insight into peddlers' methods and light for meeting their business in a way adequate and satisfactory. Nine times out of ten, local merchants can secure the business where their goods and prices are compared with those of the peddler. The advantage the latter individual has is in being on the ground with the goods. There is nothing which will take the place of personal contact, and goods and price comparisons. This method will not only defeat the aims of the peddlers but will sell your own goods as well.

MEMBERSHIP BRINGS RETURNS.

The Ontario Retail Hardware Association has been proven a good thing by more than one member. One prominent member shortly after the September convention found a jobbing house selling goods in his town to persons outside the trade. He immediately "cut out" doing business with them and notified them why. This didn't stop the jobber selling to consumers, but it did an equally good thing—it forced him to protect the retailer.

Unsolicited credit notes have been sent to the retailer on several occasions since then, the total being many times the amount of the membership fee in the Association.

If the Association can be made a help to the retailer in this way it can be of even greater assistance if the membership is doubled or trebled. When a retailer feels that he has two or three hundred dealers behind him in adjusting a grievance over some trade evil he is going to take a firmer stand, and it is only by taking a strong stand—and being in the right—that he can succeed. Join the Association if you haven't already done so.

HARDWARE TRADE GOSSIP

Ontario.

Bishop & Ball, hardware merchants, Wingham, have dissolved partnership.

John O'Neill, a well known tinsmith of Hamilton, was found dead in bed on Friday, Jan. 11.

D. Courville, hardware merchant, of Maxville, has advertised his hardware and tinshop for sale.

C. L. Macnab, of Macnab Bros., hardware merchants, Orillia, was a visitor in Toronto last week.

L. I. Hunt & Son, hardware merchants of Alvinston, have sold their business to Telford Bros.

Wm. McArthur, tinsmith, Almonte, died recently after a little over a week's illness of pneumonia. He was 62 years of age.

Alex. McAllister, of Carleton Place, is retiring from the paint business, having accepted a position as traveler for a wholesale firm.

B. Tedford, of the firm of Tedford Bros., hardware merchants, Alvinston, is in Blenheim this week, moving his family to Alvinston.

R. J. Cluff, of Cluff Bros., Toronto, was in Montreal last week on business for Warden King & Son, whose Ontario selling agents his firm are.

McKinnon & Walker, hardware merchants, of Cobalt, have dissolved partnership, and business in future will be carried on by W. T. Walker.

A. E. Lewis of Jno. Lewis & Co., Belleville, stove dealers, has been a visitor in Toronto during the week, attending the curling tournament.

The Simonds Canada Saw Company, Montreal, have removed their office and factory in Toronto from 265 King St. West to 105 Adelaide St. East.

The D. Pike Company, extensive dealers in sportsmen's supplies, Toronto, suffered loss by fire last week to the extent of $2,500, covered by insurance.

W. J. Cluff, of Cluff Bros., Toronto, has returned from a trip to Chicago and New York, where he was on business in connection with their jobbing trade in heating supplies.

B. S. Jackes, proprietor of the Model hardware store, Dundas Street, Toronto, will remove to his Yonge Street store, where he will concentrate all his efforts in future.

A. P. Horsman, manager of the Gurney Standard Metal Company, of Calgary, Alta., has been in Toronto during the past week, conferring with the head office officials.

Geo. Merrick of Toronto has been added to the traveling staff of the Pedlar People, Oshawa. Mr. Merrick has had several years' experience on the road and should make good in his new position.

Thomas Black, Winnipeg representative of the Pedlar People, metal roofing manufacturers, Oshawa, visited the office of the Pedlar People at Toronto, Oshawa and Montreal during the past fortnight.

Charlie Overholt, manager of the hardware store of Prince & Company, Bloor Street West, Toronto, has accepted a position with Lewis Bros., Montreal, and will commence work in his new position next week.

H. N. Joy, of the Joy Manufacturing Company, makers of the Joy malleable ranges, Toronto, who was severely injured by falling while skating on New Year's Day, is recovering and expects to be back at work shortly.

On the occasion of his recent marriage, the office staff of the Kemp Manufacturing Company, Toronto, presented W. J. Virtue, of the purchasing department of the company, with a handsome bronze clock, and a massive leather-covered chair.

A. A. Brown, manager of the McClary Mfg. Co.'s branch at Montreal, and A. D. Kenelly, manager of the Toronto branch, spent several days in London recently, conferring with the heads of the company regarding the coming year's business.

The employes of the McClary Manufacturing Company of London presented Thomas A. Greer, on the eve of his departure from that city, with a handsome suitcase and gentleman's companion. Mr. Greer has been with McClary's for twelve years.

Milton A. Adams, lately employed by A. W. Moore, hardware merchant, St. Catharines, and previously with R. Hadden, Picton, has accepted a position as traveling salesman with Lewis Bros., Montreal, and will represent them in Western Ontario.

Charles Array, who for the past four years has been traveling for the United Factories, Toronto, has left for New York to accept a similar position with J. J. Adams & Company, one of the largest brush manufacturing concerns in the United States.

E. Holt Gurney, of the Gurney Foundry Company, Toronto, will return next week from a visit to the hot springs at Banff, Alta., where he has been staying with James Drew, manager of the Winnipeg branch of the Gurney Foundry Company.

The hardware store of H. Jones, Uxbridge, is displaying two nice, attractive windows this week, one being of washing machines, wringers, etc., which are arranged very artistically, intermingled with other household lines, giving life to an otherwise dry exhibit.

Lewis Bros., wholesale hardware merchants, of Montreal, are having extensive improvements made to their Toronto office; the old stock will be cleaned out, and a complete new line of samples installed. When completed they will be very handsome and inviting sample rooms.

Peleg Howland, head of the firm of H. S. Howland, Sons & Company, wholesale hardware merchants, Toronto, has been unable to attend to business during the past week, but is around again. H. A. Gunn and several other members of the staff have also been suffering from the grippe.

A. Denny, formerly with the James Smart and Gurney Tilden companies, has accepted a position with D. Moore & Company, Hamilton, and will cover the territory between Toronto and Windsor. Mr. Denny replaces Clark Yuker, who has resigned and is now wintering in California.

G. P. Graham, the new leader of the Liberal party in the Province of Ontario, received his early business education in the hardware stores of J. A. Carman & Co., Iroquois, and M. F. Beach & Co., Winchester, Ont. He was born in 1859 and in 1880 forsook the hardware for the newspaper business. For the past nine years he has represented Brockville in the Legislature as well as publishing the Brockville Recorder.

Mrs. Wm. Hodgson, mother of Oscar M. Hodgson, Toronto representative of the H. R. Ives Co., Montreal, and mother-in-law of J. R. Hambly, vice-president of the Ontario Retail Hardware Association, died at the home of Mr. Hambly last week, and was buried at Drayton. She was 80 years of age.

Quebec.

H. Sibley, L'Annonciation, was in Montreal this week on business.

J. A. Paquin, St. Eustache, was in Montreal on business this week.

L. H. Goudry, Montreal, has left for the Old Country on a business trip.

A. Sweet, Winchester, Ont., visited some of the Montreal wholesalers last week.

H. H. Bourke, Windsor Mills, was a caller on some of the Montreal wholesalers this week.

W. R. Dalton, of Dalton & Sons, Kingston, Ont., was in Montreal last week on business.

Chas. A. Alexander, of A. E. Alexander & Son, Campbellton, N.B., was in Montreal this week.

Mr. Wilson, of Madole & Wilson, Napanee, called on some of the Montreal wholesalers this week.

Philemon Morency, hardware and paint merchant, of Montreal, has been succeeded by Morency and Cote.

Ludger Gravel, Montreal, has left for Detroit and other points west to see some of the big firms he represents here.

Among the firms registered in Montreal last week was the Dominion Asbestos Co., Harold H. Robertson, president.

A. O. Campbell, Vancouver, representative of Lewis Bros., Montreal, is in Montreal on his annual visit. Mr. Campbell goes as far as St. John, N.B.

I. C. Stewart, president of the Imperial Publishing Co., Halifax, publishers of the Maritime Merchant, called at the Montreal office of Hardware and Metal last week.

Alex. McArthur & Co., manufacturers of building paper, Montreal, held their annual meeting on January 17th, 1907, when a very satisfactory statement of the year's business was submitted.

The firm of J. H. Bell & Co., of Haileybury, is now known as the "Bell, Rochester Hardware Co." of Haileybury. The members of the firm remain as before, that is, J. H. Bell and G. H. Rochester.

The Ross Rifle Company, of Quebec, have entered an action for $10,000 against Le Nationaliste, of Montreal, for the publication of alleged libellous correspondence, which, besides criticizing the Ross Rifle Company in regard to their location in Quebec, went on to adversely criticize the rifle and steel material.

Alexander A. Wilson, one of the most active of the old-time business men of Montreal, passed away on Saturday afternoon, the 18th inst., after an illness of about ten days, brought about by an attack of paralysis. Mr. Wilson was a native of Coteau du Lac, Que. He was born in 1835, and was therefore in his 72nd year. A little over fifty years ago he opened a large hardware and paint business on St. Paul street, and was known from one end of Canada to the other.

WESTERN SNOW BLOCKADES.

That a serious condition of affairs exists in western Canada at the present time owing to the severity of the Winter, the shortage of fuel, the blockades of passenger and freight trains and the general inability of the railways to afford adequate transportation facilities in the face of unusual difficulties it would be folly to deny. At the same time it is very easy to exaggerate the gravity of the situation, and it is to be feared that alarming reports sent east and south by Winnipeg newspaper correspondents anxious to grind out "good copy," have created a wrong impression in eastern Canada and in the United States.

Business in the west has suffered of course from the general tie-up of the railways and the severity of the Winter. Inclement weather has hurt the retail trade and the train blockades have hindered the distribution of goods to the retailers. Shortage of cars last Fall retarded the movement of grain, the number of cars shipped from Sept. 1st, 1906, to Dec. 12th, 1906, when navigation closed on the great lakes, being 2,113 less than for the corresponding period last year. In a country where the consumer is almost entirely dependent for his ready money on the sale of his wheat this car shortage is bound to have an effect which reacts upon general business conditions. It is not strange that there should be some complaint from the wholesale houses of the slowness of collections.

In the far west the ranching industry has suffered from the unusual severity of the Winter, Owing to the unusual depth of the snow the cattle have been without food and the loss has been heavy. Newspaper despatches estimate the loss at 25 per cent., but it is too early yet for definite statements.

Nevertheless in spite of conditions which are admittedly unfavorable there is no occasion for undue alarm. Ontario, Quebec and the Maritime Provinces survived snow blockades in 1903 and 1901 which were much worse than those now being endured in the west. There was no undue alarm at the time because it was known and recognized that these conditions were unusual and the prosperity of those provinces was on a sound basis. Similarly it must be recognized that the prosperity of the west rests upon too sound a basis to allow of serious alarm because of temporarily unfavorable conditions. The troubles of this Winter are but the growing pains of the west and should be so regarded. They are due mainly to the inability of the railways to provide adequate transportation facilities. The country has in short grown too fast for the railways; they have not been able to keep up with the procession. They are, however, doing their best and with the expenditure of many additional millions during the present year on rolling stock and equipment the railways should next season be in better shape to handle the output of the west. In the meantime those who know western Canada best are losing no sleep through anxiety as to the outcome.

PUBLISHERS HELP RETAILERS.

The following editorial from Printer and Publisher, the trade newspaper published by the MacLean Publishing Company for Canadian printers, shows that some country publishers are already active in support of the retailers in their fight against the proposed parcels post C.O.D. system.

The action taken by the Forest Free Press should be copied by the publisher of every Canadian newspaper which does not depend for its support upon departmental store advertising. Retail merchants should not hesitate to ask their local editors to use their pens freely in writing articles endorsing the position taken by the Forest Free Press.

The editorial from Printer and Publisher reads as follows:

"Strenuous efforts should be made by the readers of this paper to defeat a bill which is to be introduced during the present session of Parliament, and which has for its object, the amending of the parcel post law so as to enable postmasters, in their official capacity, to deliver C.O.D. parcels, to collect the money due on them and to remit the same to the senders. Provision is also to be made for cheaper parcel postage rates.

"The commendable attitude upon this bill taken by the Forest Free Press, should be studied by all persons who are interested not only in their own advancement, but in the prosperity of the country at large. It points out some facts which should be taken into consideration by every member of Parliament before voting on the proposed bill. It rightly contends that a C.O.D. parcel post system would have a strong tendency to impair the proper and legitimate functions of the postoffice. A C.O.D. parcel post delivery would give those engaged in the mail order business an unfair advantage over country town merchants, which would undoubtedly result in a decrease in the business done by the latter, without any particular advantage accruing to the consumer.

"It will be generally conceded that the presence in the country of a large number of thriving towns and villages is more to be desired than one or two mammoth cities. By the passage of such a bill as the one in question, the smaller towns and villages of the land would be greatly injured. No effort should be spared therefore by the publishers of this country to defeat the bill, which is detrimental to themselves and the country at large, and to say the least of it, looks exceedingly monopolistic."

ADVANCE IN PARIS GREEN.

In referring to our quotations, it will be noticed that pure paris green has been marked up $1.00 per 100 lbs. This is inevitable owing to the thrice repeated story that all chemicals entering into the composition of paris green are far higher in price than has yet been experienced in recent years.

It is not thought that these high prices are due to any cornering or manipulation, but are simply owing to the tremendous demand in the metal and chemical market for the base articles used in making this insecticide.

Only a limited quantity of paris green can be made in Canada during the winter months, and as it has been found that in spreading the manufacture into the warmer seasons, it is very injurious to the workmen, there is liable to be a considerable shortage experienced this year, therefore it behooves the trade generally to make their purchases early, as from the reasons given above, a superabundance of supply cannot possibly be counted upon.

A WINNIPEG TRIUMPH.

Winnipeg retailers have an organization that does things; they are not content with holding meetings and making speeches which result in no definite action. They are organized because they believe that things can be accomplished by united effort which would be impossible without it; and they have proved the reasonableness of their belief.

Reference has been made before in these columns to the fact that Winnipeg retailers—and particularly grocers and butchers—have been put to great expense to have their garbage removed. Garbage is removed by the city from all private residences, but the dealers were forced to remove it themselves. They were held up by the scavengers and several stores were paying $4 to $5 per week for service that was very unsatisfactory. This grievance was taken up by the retail associations in the city and some time ago Secretary Coulson and a large deputation of dealers waited on the Winnipeg city council and asked that the city remove all garbage from stores and apartment blocks free of charge. The request was taken into serious consideration, and now the announcement is made that the city will remove garbage free of charge for three months. If the cost should be found to be too great to charge against the regular business tax a small special tax may be charged. In any event the city will assume the full responsibility for the removal of garbage and this was the main contention. Dealers were unable to get satisfactory scavenger service and were liable to fines in consequence. All this has been changed by united effort. The moral is obvious.

GEO. CAVERHILL
Caverhill, Learmont & Co., President Montreal of Trade.

HEATING PROBLEMS.

During the extreme cold weather of last week the natural gas supply at Hamilton, Ont. failed. Dozens of houses depended upon the gas supply for heat, while many restaurants and supplies had no other means of cooking food. Much suffering and inconvenience resulted, therefore, and there was a rush for coal stoves and heaters.

In western Canada there has also been much suffering from the extreme cold because of the shortage of coal resulting from the strikes of coal miners and the failure of the railroads to meet the demands of the country. In the Pacific coast cities the usual mild climate has not forced all householders to equip their premises with furnaces or boilers and the present cold snap has given stove dealers a big trade as well as loading up plumbers with work from frozen water pipes.

THOMAS J. DRUMMOND
Drummond, McCall & Co., 1st Vice-President, Montreal Board of Trade.

RAILROADS BACK DOWN.

That Canadian railways have much to learn yet in the proper conduct of their business has been illustrated by their actions during the past couple of months.

The new customs tariff went into effect at the end of November and it gave an increased preference on imports from Great Britain, particularly on metals. Here was an opportunity for graft, thought the railways, and they proceeded to put into force an increased tariff on freight carried from Atlantic ports, the increases being most noticeable on the articles which were given an increased preference in the new customs tariff. The new regulations were put into force at once without regard for the interests of merchants.

Protests were immediately made against the disturbance of freight rates in the middle of a season after all contracts had been made for the supply of

J. S. N. DOUGALL
McCaskill, Dougall & Co., Member Executive Montreal Board of Trade.

goods for several months to come. It was rightly contended that due notice should be given by the railroad companies when rates are to be advanced, the notice to be several months ahead in order to allow the merchants to figure freight charges correctly on import orders.

The railroads were forced to take back water. Another notice has been issued countermanding the previous order and the old rates are in force. The incident is interesting, showing the greed of the railway corporations and how it was frustrated for once.

MONTREAL BOARD OF TRADE ELECTIONS.

The adjourned meeting of the Montreal Board of Trade took place at noon on January 29, 1907, F. H. Mathewson, the retiring president, occupying the chair for the last time.

The results of the elections for first vice-president, members of the council, and members of the board of arbitration, were announced to the large concourse of members present by the secretary, and were as follows:—

1st vice-pres., Thos. J. Drummond.

Members of Council: J. R. Binning, A. A. Ayer, Geo. L. Cains, W. W. Craig, J. S. N. Dougall, Geo. A. Kohl, J. P. Mullarkey, J. L. McCulloch, Edgar McDougall, Alex. McLaurin, Alex Orsali, and J. A. Richardson.

Members Arbitration Board: James Carruthers, Sir Geo. A. Drummond, Geo. E. Drummond, Wm. I. Greer, E. B. Greenshields, Arthur J. Hodgson, F. H. Mathewson, R. W. McDougall, Alex. McPhee, John McKergow, Alex. Ramsay, James Thom.

Immediately after the reading of the returns Mr. Mathewson introduced his successor, Geo. Caverhill, and the latter was installed as president for 1907.

Markets and Market Notes

(For detailed prices see Current Market Quotations, page 62.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Galvanized Iron Some lines advanced.
Pig Iron Shows advances.
Copper Wire Coat and Hat Hooks — Advance 10 cents per gross for 3-inch.

TORONTO.

Jenkins Air Vents 50 cents higher.
Soldering Irons Quoted higher.
Plumbers' Oakum Now $4.75.
Kerr Weber Straightway Valves—Advanced.
Window Glass—New list, lower prices.
Wire Coat Hooks—Advanced.
Nails Advanced 5c. base.
Black and Galvanized Sheets—Higher.
Boiler Plates Advance expected.

Montreal Hardware Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, Feb 1, 1907.

Although last week's pace has quieted down slightly, there is still plenty doing in hardware circles, and almost every mail brings in orders for spring shipment.

Owing to heavy storms in the West, orders from that quarter have fallen off slightly during the week.

Copper wire coat and hat hooks have advanced 10 cents per gross on the 3-inch size, being now quoted at 60c instead of 50 cents.

The new list on building paper, mentioned last week, is dated January 14, 1907, and shows advances of 5 cents on several lines.

AXES. — Selling well. We still quote: $7.60 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

LANTERNS. — Our prices are: "Prism" globes, $1.20; Cold blast, $6.50; No. 0, Safety, $4.00.

COW TIES AND STALL FIXTURES —We still quote; Cow ties, discount 40 per cent. off list; stall fixtures, discount 35 per cent. off list.

SLEIGH BELLS—Moving, but very slowly. Our prices remain: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50; pear shape, $1.15 to $2; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

RIVETS AND BURRS.—Last week's advance on the copper article still holds good. We quote: Best iron rivets, section carriage, and wagon box black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 25 per cent. off, and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 15 per cent., subject to usual charge for half-pound boxes.

HAY WIRE.—Prices remain firm. Our quotations are: No. 13, $2.55; No. 14, $2.65; No. 15, $2.80; f.o.b. Montreal.

MACHINE SCREWS.—Stocks seem to be getting into shape and the scarcity is not so noticeable as last week. Our prices remain: Flat head, iron, 35 per cent., flat head brass, 35 per cent., Felisterhead, iron, 30 per cent.. Felisterhead, brass, 25 per cent.

BOLTS AND NUTS—Scarce, discounts remain: Carriage bolts, 3 and under, 60 and 10; 7-16 and larger, 55 per cent.; fancy carriage bolts, 50 per cent.; sleigh shoe bolts, ⅜ and under, 60 per cent.; 7-16 and over, 50 per cent.; machine bolts, ⅜ and under, 60 per cent.; 7-16 and larger, 55 per cent.

HORSE NAILS.—Discounts remain: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.

WIRE NAILS.—Our prices remain: $2.40 per keg base f.o.b. Montreal.

CUT NAILS—We continue to quote: $2.50 per 100 lbs.; M.R.M. Co., latest, $2.30 per keg base, f.o.b. Montreal.

HORSESHOES. — Our prices are: P.B. new pattern, base price, improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 lbs. More than three sizes, 25c. per 100 lbs. extra.

BUILDING PAPER. — See list of January 14, 1907 (advance of 5 cents on several lines).

CEMENT AND FIREBRICK.—No change in prices. We are still quoting: "Lehigh" Portland in wood, $2.54, in cotton sacks, $2.39; in paper sacks, $2.31. Lefarge (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21; American $30 to $35; White Bros.' English cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—Our quotations remain: 5-16 inch, $4.40; 3-8 inch, $3.90; 7-16 inch, $3.70; 1-2 inch, $3.50; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.20; 7-8 inch, $3.10; 1 inch, $3.10.

SHOT—Our prices remain as follows: Shot packed in 25-lb. bags, ordinary drop AAA to dust, $7 per 100 lbs.; chilled, No. 1—10, $7.50 per 100 lbs.; brick and seal, $8 per 100 lbs.; ball, $8.50 per 100 lbs. Net list. Bags less than 25 lbs., ½c. per lb. extra, net; f.o.b. Montreal, Toronto, Hamilton, London, St. John, Halifax.

AMMUNITION — Slow. Very little sold. Our prices remain: Loaded with black powder, 12 and 16 gauge, per 1,000, $15; 10 gauge, per 1,000, $18; loaded with smokeless powder, 12 and 16 gauge, per 1,000, $20.50; 10 gauge, $23.50.

GREEN WIRE CLOTH.—We continue to quote: In 100 foot rolls, $1.62½ per hundred square feet, in 50 feet rolls, $1.67½ per hundred square feet.

Toronto Hardware Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, February. 1, 1907.

Hardware business continues very brisk and in every way gives prospects of as bright a year as last.

Looking at it from the point of view of one prominent hardwareman, connected with a leading wholesale house in Toronto, it is questionable, even with present large orders of the business will be as large for 1907, as last year. Owing to the remarkably open Winter, building operations then went on all Winter, and of course demanded material to keep going. This year the weather having been more severe, building has not been so active, but there has been no apparent effect on the ordering of goods. The reason given for this is the many advances which have lately taken place, and the prospects of further advances which have the tendency to encourage the hardware merchant to order early.

Innumerable price changes are being made by jobbers, and while a great number of these are of minor interest, they are all, nevertheless, of importance to the hardware merchant. France, Germany, and Great Britain have all advanced their prices in hardware, owing to the great demand and high price of all raw materials.

Nails have again advanced and are now quoted at $2.40 base.

All copper goods may be expected to advance further owing to the great demand and high price of copper.

AXES AND HANDLES—Orders for these articles have been nearly all taken, the numerous lines meeting with general satisfaction.

WASHING MACHINES — Merchants who have received these goods are placing them in a prominent position, a

great many making window displays to a very effective advantage for Spring trade.

SPORTING GOODS — Hockey sticks are still selling briskly. Skates are also very brisk, but in many cases sizes cannot be procured.

CHAIN—Remains at our former quotations: ⅜ in., $3.50; 9-16 in., $3.55; ½ in., $3.60; 7-16 in., $3.85; 3-8 in., $4.10; 5-16 in., $4.70; 1-4 in., $5.10.

RIVETS AND BURRS—Remain at the 10 per cent. advance as quoted last week, but a further advance may take place again shortly, as the raw material is so high.

SCREWS—Stocks seem to be in good shape, and nothing further has been heard of an advance. All American manufacturers of screws have lately advanced their products 5 points, but it will have no material difference on Canadian products.

BOLTS AND NUTS—Large orders are being received for these articles daily, and the demand cannot be coped with. Since the factory burning down here a year ago the demand has never been caught up with.

TOOLS—Large orders are being sent out daily, the advance on Stanley and Starrett's goods not affecting the ordering for Spring shipment.

SHOVELS—A number of new lines have been placed on the market and are meeting with quite a demand.

LANTERNS—The demand is very quiet, merchants apparently having large stocks on hand.

EXTENSION AND STEP LADDERS—Price remains the same as quoted last week, 11 cents per foot for 3 to 6 feet, and 12 cents per foot for 7 to 10-foot ladders. Waggoner extension ladders 40 per cent.

POULTRY NETTING—We quote, 2-inch mesh, 19 w.g., discount 50 and 10 per cent, all others 50 per cent.

WIRE FENCING — Galvanized and plain wire remain at advanced prices, but continue selling well.

OILED AND ANNEALED WIRE—(Canadian)—Gauge 10, $2.41; gauge 11, $2.47; gauge 12, $2.55, per 100 lbs.

WIRE NAILS—A further advance of 5 cents per cwt. has been made, and we now quote $2.40 base.

CUT NAILS—We quote $2.30 base f.o.b. Montreal; Toronto, 20c. higher.

HORSENAILS—Capewell brand, list per pound, No. 5, 15c.; No. 6, 14c.; Nos. 7 and 8, 13c.; Nos. 9 to 12, 12c.; f.o.b. Toronto and Winnipeg, discounts on application. "C" brand, 40, 10 and 7½ off list. "M.R.M." brand, 60 per cent. off.

HORSESHOES—Our quotations continue as follows: P.B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1, and smaller, $4.05; snow, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toeweight, all sizes, 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per 100 lbs. extra; more than three sizes in a keg, 25c. per 100 lbs. extra.

BUILDING PAPER—At present very little business is done in this line, but all goods remain firm at advanced prices.

CEMENT—We quote: For carload orders, f.o.b. Toronto, Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Portland, $2.05 upwards.

FIREBRICK—English and Scotch firebrick, $27 to $30. American low-grade, $23 to $25; high-grade, $27.50 to $35.

HIDES, WOOL AND FURS — Hides are lower, lamb skins higher, and tallow is slightly advanced. Furs also continue to advance.

Montreal Metal Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, February 1, 1907

Metals, like sheep, seem to have a tendency to follow a leader. Last week ingot copper started the procession skywards, and now, as though through sympathy—or jealousy—other metals must do likewise. Pig iron is one of the culprits this week to add to the trials of manufacturers who depend upon the prices of raw material to keep the family larder well stocked and at the same time not pull too hard on the string attached to the long-suffering consumers' pocket book. Some lines of galvanized iron also have a liking for the atmosphere up in the region of the clouds, and if we may take anything from present symptoms, they seem bent on reaching their destination without any unnecessary delay.

Ingot copper remains scarce and very firm in price.

Ingot tin dropped slightly during the week, but has again stiffened up.

COPPER.—Still very short, with no changes over last week's prices. Our quotations remain: Ingot copper, 26½ to 27 cents; sheet copper, base sizes, 34 cents.

INGOT TIN.—Dropped slightly during the week, but has firmed up again. Our prices remain: 45½ to 46 cents per pound.

ZINC SPELTER. — No changes yet. We are quoting: $7.50 to $7.75 per 100 lbs.

PIG LEAD—Very firm. Our prices remain: $5.50 to $5.60 per 100 lbs.

ANTIMONY—No change over last week's prices, we still quote: 27½ to 28 cts. per pound.

PIG IRON. — Some lines show advances. We now quote: Londonderry, $24.50; Carron, No. 1, $27.00; Carron, special, $25.50; Summerlee, No. 2, selected, $25.00; Summerlee, No. 3, soft, $23.50.

BOILER TUBES. — Remain very firm. Our prices are: 1½ to 2 in., $9.50; 2½ in., $10.35; 2¾ in., $11.50; 3 in., $13.00; 3½ in., $17.00; 4 in., $21.50; 5 in., $45.00.

TOOL STEEL — Our prices remain: Colonial Black Diamond, 8c to 9c; Sanderson's 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Hardening," 65c. per pound; Conqueror, 7½c.; Conqueror high speed steel, 60c.; Jowitt's Diamond J., 6¼c. to 7c.; Jowitt's best, 11c. to 11½c.

MERCHANT STEEL.—Our prices are as follows: Sleigh shoe, $2.25; tire, $2.40, spring, $2.75; toecalk, $3.05; machinery iron finish, $2.40; reeled machinery steel, $2.75; mild, $2.25 base and upwards; square harrow teeth $2.40; band steel, $2.45 base. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING—Present prices are: 3-16 inch to ¼ inch, $7.25; 5-16 inch to 11-32 inch, $6.20; ⅜ inch to 17-32 inch, $5.15; 9-16 inch to 47-64 inch, $4.45; ¾ inch to 17-16 inch, $4.10; 1½ inch to 3 inch, $3.75; 3⅛ to 3 7-16 inch, $3.92; 3½ inch to 3 15-16 inch, $4.10; 4 inch to 4 7-16 inch, $4.45; 4½ inch to 4 15-16 inch, $4.80. This is equivalent to 30 per cent. off list.

GALVANIZED IRON. — Shows advances. We now quote: Queen's Head, 28 gauge, $4.70; 26 gauge, $4.45; 22 to 24 gauge, $4.20; 16 to 20 gauge, $3.95; Apollo, 28 gauge, $4.45; 26 gauge, $4.30; 22 and 24 gauge, $3.75; 16 and 20 gauge, $3.60; Comet, 28 gauge, $4.45; 26 gauge, $4.35; 22 and 24 gauge, $3.75; 16 to 20 gauge, $3.60; Fleur-de-Lis, 28 gauge, $4.55; 26 gauge, $4.30; 22 and 24 gauge, $4.05; 16 to 20 gauge, $3.80; Gorbals "Best Best," 28 gauge, $4.55; Colborne Crown, 28 gauge, $4.45; 26 gauge, $4.30; 24 gauge, $3.75. In less than case lots, 25c extra.

OLD MATERIAL. — Remains the same. Our prices are: Heavy copper, 20c. per lb.; light copper, 17c. per lb.; heavy red brass, 17c. per lb.; heavy yellow brass, 14c per lb.; light brass, 10 to 10½c per lb.; tea lead, 4½c per lb.; heavy lead, 4½c. per lb.; scrap zinc, 4¼c. per lb.; No. 1 wrought $17.00 per ton; No. 2 wrought $6.00 per ton; No. 1 machinery, $18.00 per ton; stove plate, $13.00 per ton; old rubber, 10½ cents per lb.; mixed rags, 1 to 1¼c per lb.

Toronto Metal Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Feb. 1, 1907.

The same old story is to be told about the metals. With the exception of lead they are all stiff in price and exceedingly hard to get.

Copper, particularly, is scarce and firm in price, there being practically a famine in this metal. The Amalgamated is extending its power over the entire sources of supply and little change can be looked for, therefore, as it will not be to their interest to weaken the market. Brass is also difficult to obtain, with stocks very light.

Lead is more active, but supplies continue hard to get. Tin has declined a cent but black and galvanized sheets have advanced ten cents and boiler plates will do so during the coming week it is expected.

The many reports of metals being stolen indicate that the light-fingered gentry have been reading the market reports

The volume of business transacted continues to total at large figures in spite of the difficulty experienced in filling orders in some metals. Bookings are large and with nearly all mills filled up for months ahead there appears to be every possibility of iron, copper and other high priced metals advancing to even higher figures.

PIG IRON. — The market continues strong with a good book business doing. Present delivery orders are seasonably light. Hamilton, Midland and Londonderry are off the market, and Radnor is quoted at $33 at furnace. Middlesborough is quoted at $24.50, and Summerlee, at $26 f.o.b., Toronto.

BAR IRON.— No change has taken place since last week. Prices are firm and we still quote: $2.30 f.o.b. Toronto, with 2 per cent. discount.

INGOT TIN. — Ingots have declined one cent owing to a decreased demand, and we are now quoting 44 to 45 cents a pound.

TIN PLATES. — Conditions are unchanged with prices firm. Only a seasonable business is being done.

SHEETS AND PLATES.—Both black and galvanized sheets have advanced 10 cents. Stocks are low and the market active.

BRASS. — Light stocks are reported everywhere with deliveries hard to obtain. We continue to quote 30 cents per pound.

COPPER. — Almost a famine exists and the high prices are expected to go even higher. We continue to quote: Ingot copper $26 per 100 lbs., and sheet copper $31 to $32 per 100 lbs.

LEAD. —Stocks are light with a very lively demand from buyers who are short. Prices keep very firm. We quote: $5.40 for imported pig and $5.75 to $6.00 for bar lead.

ZINC SPELTER —Stocks continue light with the market active. We quote 7½c. per lb. for foreign and 7c. per lb. for domestic. Sheet zinc is quoted at 8 1-4c. in casks, and 8 1-2c. in part casks.

BOILER PLATES AND TUBES. An advance is looked for but we still quote: Plates, per 100 lbs., ¼ in. to ½ in., $2.50; ⅝ in., $2.35 heads, per 100 lbs., $2.75; tank plates, 3-16 in., $2.65; tubes, per 100 feet, 1¼ in., $8.50; 2, $9; 2 1-2, $11.30; 3, $12.50; 3 1-2, $16; 4, $20.00. Terms, 2 per cent. off.

ANTIMONY. — More activity is reported, but stocks are plentiful. Prices are unchanged at 27c. per pound.

OLD MATERIAL. Dealers report a good demand with supplies coming in well. Their buying prices are: Heavy copper and wire, 20 cents per lb.; light copper, 17½c. per lb.; heavy red brass, 17½c. per lb.; heavy yellow brass, 15c. per lb.; light brass, 11c. per lb.; tea lead, $4.00 per 100 lbs.; heavy lead, $4.25 per 100 lbs.; scrap zinc, 4½c. per lb.; No. 1 wrought iron, $15; No. 2 wrought, $8; machinery cast scrap, $17 to $18; stove plate, $14; malleable and steel, $9; old rubbers, 10½c. per pound; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—Stocks are in good shape, with the scarcity of slack being relieved. We quote:

Standard Hocking soft coal f.o.b. at mines, lump $1.50, ⅜ inch, $1.40; run of mine, $1.30; nut, $1.25; N. & S., $1; P. & S. 85c.

Youghiogheny soft coal in cars, bond er at bridges: lump, $2.60; ⅜ inch, $2.50; mine run, $2.40; slack, $2.15.

United States Metal Markets

From the Iron Age, Jan. 31, 1907.

Deliveries of pig iron to foundries and steel works have been better, particularly north of the Potomac and east of the Allegheny Mountains, and the demand for spot and prompt iron has much lessened. The territory more directly dependent upon Southern iron seems still to be suffering from inadequate shipments. Generally speaking, founders have been much exasperated during the past few months over the inability to get iron on old lower price contracts, while a stiff premium when paid for spot brought the same iron to the foundry. Founders, too, are exercised all over the country over the action of the railroads in demanding an advance of 25s. per ton freight on pig iron from Southern furnaces, effective Feb. 1, when the very iron was due them months ago, and did not reach them because the railroads could not handle it.

Prices abroad have weakened and Middlesbrough to-day was reported at 56s. 10½d. This means that No. 3 Middlesbrough can be laid down, duty paid, at $19.50 to $20. Last week some foreign iron was sold on arrival at a concession in preference to storing. There is still considerable foreign iron to come, practically all of it sold. There is at least one large inquiry for foreign iron in the market, but that is for a consumer who would use it for export goods.

So far as the pig iron market for the second half of the year is concerned, there has been quite a movement in the Central West. Cincinnati reports sales of 15,000 tons for the second half to a large implement maker, a total of 10,000 tons to two malleable foundries, and 8,000 tons to a car builder. In New England a number of melters have purchased an aggregate of about 5,000 tons at a shade under $24. Pittsburgh reports the market for Bessemer pig a shade easier for the second and third quarters, quoting Valley iron at $22 at furnace Ferromanganese is weaker.

There has been a sharp advance in iron skelp, due to the fact that leading consumers have made some large purchases during the past two weeks. The manufacturers of merchant pipe and of tubes have again advanced prices $2 per ton. The demand is active.

From the Iron Trade Review, Jan. 31, 1907.

Advances in finished materal were plentiful this week. The National Tube Co. raised merchant pipe and boiler tubes one point, or $2 a ton each, and the American Sheet and Tin Plate Co. advanced blue annealed sheets $1 a ton, galvanized sheets $2 a ton, and galvanized corrugated roofing 10 cents a square. Store prices were also advanced like amounts. Independent tin plate manufacturers also advanced their prices 10 cents per base box for third quarter deliveries. Jobbers' prices on tubes are unchanged, but an advance of $2 a ton was made on warehouse shipments of plates.

In spite of the fact that buyers are showing more deliberation in placing orders for the last half of the year, and that slightly lower quotations are made in some cases, the pig iron market continues very strong. The importance of some small concessions recently made in the east under unusual conditions has been exaggerated. Six months ago a great many furnaces found themselves hopelessly oversold and have since been very conservative in taking orders. Owing to this policy, and also to weather conditions being favorable to a large production, these furnace interests now find themselves more comfortably fixed, and in a few cases they are able to offer spot iron. Notwithstanding concessions on small lots, the prices in the east have remained firm, sales having been in good volume and in some instances quotations have been advanced. Taken as a whole, the pig iron conditions are easier but furnish absolutely no cause for belief that there is to be any decided decline.

The demand for structural material has improved in most centres, but competition is brisk, and the principal producer has recently lost a number of orders to independent interests which were eager for business. There is, however, plenty of work in sight with plates

and specifications for operation requiring big tonnage, but financial considerations prevent immediate action.

London, Eng., Metal Markets

From Metal Market Report, Jan. 30, 1907.

Cleveland warrants are quoted at 56s. 9d., and Glasgow Standard warrants at 56s., making price as compared with last week, 2s. 3d. lower on Cleveland warrants and 3s. lower on Glasgow Standard warrants.

TIN—Spot tin opened weak at £189 5s., futures at £189 5s., and after sales of 220 tons of spot and 550 tons of futures closed weak at £189 for spot, £189 for futures, making price compared with last week, £3 5s. lower on spot and £3 10s. lower on futures.

COPPER—Spot copper opened weak at £106 12s. 6d., futures, £107 17s. 6d., and after sales of 400 tons of spot and 500 tons of futures, closed easy at £106 5s. for spot, and £107 12s. 6d. for futures, making price compared with last week, 10s. lower on spot and £1 12s. 6d. lower on futures.

LEAD—The market closed at £19 15s., making price as compared with last week unchnged.

SPELTER—The market closed at £26 15s., making price as compared with last week, £2 7s. 6d. higher.

Calgary Hardware Trade News

Jan. 19, 1907.

Messrs. Cushing Brothers, the largest sash and door manufacturers of the west, are reported to be contemplating the vacation of their premises and the erection of a large factory on the brewery flat in the east of the city. Their present location covers a very valuable portion in the centre of the city. This firm have been kept working at their fullest capacity in all departments, the demand for the stock sizes of doors and sashes having been enormous for the city and large shipments have also been made to Banff, Laggan, and the other busy towns on the line out to British Columbia. Special outfits for banks, hotels and stores have also been greatly in demand

At the first meeting of the new city council there were brought forward several matters of moment to the commercial interests of Calgary. A recommendation from the local board of trade regarding civic telephones was read and it was agreed to again refer the matter to the Fire Committee, which had the matter in charge last year. They are to investigate the matter, secure all information for the installing and maintenance of a municipal telephone system and report to the council. A proposal was also submitted from the Calgary Power and Street Railway Co., a syndicate that has been formed to supply the city with electric power and to operate a street car system throughout the city. It is proposed to generate electricity at Radnor and transmit to sub-stations at Calgary, to be sold to the city 50 per cent. lower than the city can produce. A 35-year franchise is asked for a street railway, the city to have the option, after 10 years, of purchasing at cost, less depreciation or plus 10 per cent. If, after 10 years, the city does not care to buy the system, the company will allow them one third of the net revenue. A first class system is promised, with a 5 cent tariff and special fares for workmen. It has been resolved to obtain more details of the proposal and if approved by the council the question is to be submitted to the ratepayers for decision.

The Canadian agent of the Perfection power block machines, Minneapolis, has been in the city making arrangements for the installation of a plant to be operated by a local syndicate. They will manufacture power pressed stone, which can be used for general building purposes, being able, it is said, to stand a pressure of over one hundred tons per square foot.

It is also reported that a Winnipeg wholesale house are to open a branch here, to be followed afterwards by a manufacturing plant.

B.C. Hardware Trade News

Vancouver, Jan. 18, '07.

Building trades have never in six or seven years had such a stoppage. The recent cold weather has been such that very few men cared to work, and many unfinished buildings have been left till the cold wave has passed over. The thermometer has risen to some 15 degrees above zero and a snow fall of 6 inches last night has made a change. Indications are now that a January thaw of the old-fashioned sort is coming.

In the interior the smelters and some of the big mines have had to shut down for lack of coke and coal. Heavy snows have so interfered with transportation that the collieries of the Crow's Nest Pass, on which the whole interior depends for fuel, have not been able to get coke and coal forward.

A most interesting deal in power was consummated last week in the interior, when Lorne A. Campbell, manager of the West Kootenay Power & Light Co., closed a deal giving his company control of the South Kootenay Water Power Co. This enables the West Kootenay Power & Light Co. to enter the district of Yale, including the boundary towns and mines, and supply power. Last year this company sought amendments to its charter to empower it to do this, but the Cascade Power Co., operating at Cascade, in the boundary district, successfully fought the application. Under the charter of the South Kootenay Co. just acquired, the West Kootenay Co. has ample powers to supply electric energy in the district. Hitherto this company, which has its power station on the Kootenay river between Nelson and Robson, has confined its operations to the Rossland and Nelson camps and surrounding districts. The deal just closed means a great alteration in the boundary district.

The lumber situation is likely to be as much of a problem as ever in the approaching season, for orders placed for shipment right along have been badly tied up for lack of cars, while weather conditions have tied up the railway and thus delayed shipments still further. The stormy weather has stopped almost all logging in the coast district till the deep snow melts off, and towing has been almost impossible. In many of the small bays and harbors up-coast, where log booms are gathered, there has been so much ice that tugs could not get out with their tows. The mills have practically all closed down for the present owing to the difficulty of running in the frost, and the reduction in cut is from the same cause.

In hardware circles a few changes are reported. Bar iron base has been advanced by 20c., to $3.10. White lead is up again, an advance of $1.00 on previous prevailing price. Wire nails, imported, have been put up 10c. base. Wire of all grades is away up, and quotations from the English manufacturers quite keep pace with the increases quoted on the American side of the line, where conditions at the mills are such that no further orders are desired.

Vancouver, Jan. 24, 1907

Members of the B.C. Lumbermen's Association express themselves as having nothing to fear from the investigations to be made by the select committee of the Dominion House, which by resolution was decided upon this week, to inquire into the working of an alleged lumber combine of unlawful nature. The assertions that fines are imposed on members for selling to non-members of the Northwest Lumber Dealers Association, and that expulsion is also resorted to, are denied by men well posted in the workings of the association. The general charge made by the Alberta member, Mr. Herron, who moved for the special committee, that an unlawful combine exists is specifically denied.

Actual conditions in the lumber industry in this province, so the lumbermen claim, will bear out the prices charged for lumber at the present time. The extreme high price paid for logs, of some $10 per thousand on the average for the past few months, the scarcity of labor and the high wages prevailing, are all factors in the regulation of the price. The millmen assert that the railways get the lion's share of the price paid by the Northwest consumers for lumber.

While the Dominion House of Commons was dealing with the motion to appoint a select committee, the Mountain Lumbermen's Association, 125 strong, was holding its quarterly meeting at Nelson, B.C. This association, while it is affiliated with the coast association, is practically confined to the millmen operating in the interior, or mountain section of B. C. The session closed last Friday decided to increase prices of lumber in the cheaper grades by 50c. per thousand. This was the only change in the price list. The labor

question was discussed and cheap rates from the east and from Europe were advocated as a means of getting in increased help for mills and lumber camps. The advertising of British Columbia in Europe was also discussed and approved in a general way.

On the coast the log famine is getting worse, and would be severely felt if all the mills were in full running condition. But most of them are still shut down, all having been compelled to close by the culmination of the cold snap last week. The bays and inlets on the northern coast, where logs are usually collected and boomed ready to be brought to the mills, have all been frozen over, so that the tugs could not work. The lumber camps are, many of them, still shut down owing to snow in the woods. Many logs were fast in the ice, so that it was impossible to move booms. The warm weather this week has made a rapid change, but the trade has not recovered and logs are still slow coming in. If conditions had been made to order, they could not be more ideal for creating a stringency in the lumber supply and consequent upward tendency of prices, for the demand from the Northwest is still insistent, for the lumber. The inability of the railways to supply cars and the difficulty to keep the line open, let alone move through freight, have tended to protect the millmen but as soon as there are cars to be had, and the line is open for shipment of freight, the question of price will again be considered.

Mr. Robert Lowe, of White Horse, a prominent pioneer merchant of the Yukon, a member of the Yukon Council (elective), from its inception, and the man popularly supposed to have had the refusal of the governorship of the Yukon as successor to W. B. McInnes, spent a few days in Vancouver this week on his way home from a brief eastern visit. Mr. Lowe is deeply interested in the Great North. His faith in its resources is being tangibly rewarded, for he is one of the heaviest operators in coal and copper lands in the White Horse district. He states that much activity has been shown in copper claims for the past year, and that the coming summer will see large development, for many prominent practical mining men from Spokane, Montana, and other copper mining sections have become interested in the copper properties of the north. Mr. Lowe sold one copper property when out on this trip, and he has others. He has also a promising coal property, which he has under development. He recently paid a fancy figure to his other two partners for their interests in it, and now owns it solely. He expects to have it developed on a large basis this season.

There is some certainty of a smelter being built at or near White Horse which will at once assure a number of the near-by copper properties becoming shippers. The general condition of the Yukon is steady and satisfactory. The Guggenheims taking hold of the Klondike mines has given a stability to the operations there, though, of course, a change of business basis has followed. The identification of Wm. Mackenzie, of the Canadian Northern, with the Conrad Consolidated Copper Mines at Conrad City, near White Horse, has done a great deal to impress the permanency and value of the district upon the business public. Mr. Lowe left for the north on the steamer Dolphin on Tuesday.

Giving as a reason for the increase, the unprecedented demand for coal from the mines of this coast, the Western Fuel Co., operating the Nanaimo collieries, has granted voluntarily an increase of 5 per cent. in their wages to the miners. This is for January, and for February the increase is to be 10 per cent. The Dunsmuir mines, at Ladysmith, have also granted a 10 per cent. increase to their men. At the same time the price of coal has gone up 50c. per ton, so that the consumer pays the whole shot—as usual.

FIRE IN PILLOW & HERSEY PLANT

The building on Mill St., Montreal, which was recently occupied by The Pillow & Hersey Manufacturing Co., was damaged on the evening of the 25th ult. to the extent of $2,000 by a fire which broke out in the machine shop. There was little machinery in the shop at the time, as most of it had already been removed to make room for the Ogilvie Flour Mills Co., who recently bought the building.

NEW HORSESHOE FACTORY.

The Toronto and Belleville Rolling Mills, which were recently overhauled and thoroughly equipped with the latest machinery, are now being used in making a fine brand of horseshoes. The company announces that they have installed improved machinery and have secured the services of expert workmen to operate this part of their plant under the supervision of P. J. Smith, known to horseshoers in all parts of Canada. The new shoes are fully guaranteed and should meet with a large sale.

WESTERN TRADE NOTES.

J. A. N. Collinge joined the traveling staff this week of Woods Western.

J. A. Fraser, hardware merchant, of Russell, Man., will shortly move into his new store in the Wright block.

C. D. Sparrow, hardware merchant, of Fairfax, Man., has sold out his business to Tufts Bros.

Landon, Hellier and Heartnell, tinsmiths, of Saskatoon, have been succeeded in business by W. P. Landon.

W. W. La Chance, architect, Saskatoon, was in Winnipeg this week registered at the Royal Alexandra. He was on his return journey from a holiday trip to the east.

Philip Walker, of Grose & Walker, Winnipeg, manufacturers' agents, is in Chicago this week in consultation with several of the firms whom he and Mr. Grose represent in the west.

J. A. Gilhaly, hardware merchant, of Arden, Man., was in Winnipeg this week calling on his host of friends in the trade. He was on his way home from a holiday trip to Ontario.

On leaving the employ of the Vulcan Iron Works, Winnipeg, to accept a position with Kelly Bros. & Mitchell, George Duross was presented by the Vulcan employes with an address and handsome Morris chair.

Arthur Britton, of Winnipeg, late of the James Ashdown Hardware Company, stayed at Port Hope on his way to Montreal to purchase goods for his store, known as the Western Sporting Goods Company, which he will open in Winnipeg.

Gordon McKeag, of Winnipeg, formerly of Fergus, has been appointed manager of the Anchor Wire Fence Company, of that city. Mr. McKeag has represented this firm on the road for the past seven years, and is deserving of his promotion.

C. D. Waldon, sales manager of the Pease-Waldon Co., Winnipeg, returned home last week by way of Chicago from an extended business and pleasure trip in eastern Canada. He was accompanied by W. G. Jones, treasurer of the Pease Foundry Co., Toronto.

Geo. D. Wood, head of Geo. D. Wood & Co., left Winnipeg on Saturday afternoon of last week for Hot Springs, Arkansas. Mr. Wood has been confined to his home for the last four months by a severe attack of sciatica, and it is hoped that he may receive permanent relief from the curative waters and balmy climate of Hot Springs.

One of the most disastrous fires in the history of Saskatoon occurred on Jan. 17th, in the hardware store of Oliver & Kempthorne, on Second avenue. The blaze began in the furnace room upstairs. The early man had just started the morning fire and had gone away. Mr. Kempthorne, who, with his sister, occupied rooms in the front of the building, was aroused by the smoke and made a hurried exit. His sister was soon afterwards taken out of the front window of the burning building by firemen. The total loss is estimated at $54,000, and the insurance is placed at $28,000.

MARITIME TRADE NOTES.

The stock of Crump and Perriers, plumbers and gasfitters, of Halifax, was destroyed by fire on January 18.

Ernest T. Dryden, of Moncton, N.B., has accepted a position with the John Watson Hardware Company, of Houlton, Maine.

UNITED STATES TRADE NOTES

The Atlas Manufacturing Co., New Haven, Conn., manufacturers of Bradley steel shelf brackets, wire closet hooks, etc., have increased their capitalization from $5,000 to $70,000, and are planning to increase their output as well as enlarge their line by adding several new sizes of brackets, coat and hat hooks and tinned spoons. The Atlas Company are well known to the trade in Canada and their growth will be noted with interest.

BONSPIEL VISITORS

Dealers visiting Winnipeg during the Bonspiel, or attending the convention of the Western Retail Hardware Association, are invited to make our offices and showrooms on Portage Ave.

THEIR HEADQUARTERS

Have your mail sent in our care and we'll look after it for you. Take time from the delights of "the roarin' game" to pay us a call. You are heartily welcome at any time.

MANITOBA HARDWARE AND METAL MARKETS

(Market quotations corrected by telegraph up to 12 a.m. Friday, Feb. 1. 1907.)

Room 511, Union Bank Building, Office of HARDWARE AND METAL, Winnipeg, Man.

Although the railways continue to accept all classes of freight for delivery there are complaints from retailers in all parts of the west that they cannot get their goods. Snow blockades and unusually severe weather have combined to tie up the railways, and it will be some little time before a normal condition of affairs is restored.

Discounts have been reduced on Peterborough and Gurney locks, and prices have been advanced on building paper and rivets.

LANTERNS. — Quotations are as follows: Cold blast, per dozen, $6.50; coppered cold blast, per dozen, $8.50; cold blast dash, per dozen, $8.50.

WIRE.—Prices on barb wire for 1907 shew a sharp advance as compared with last year. Revised prices are as follows: Barbed wire, 100 lbs., $3.22½; plain galvanized, 6, 7 and 8, $3.70; No. 9, $3.25; No. 10, $3.70; No. 11, $3.80; No. 12, $3.45; No. 13, $3.55; No. 14, $4.00; No. 15, $4.25; No. 16, $4.40; plain twist, $3.45; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS — Lists and discounts are quoted as follows: Capewell brand, list, per lb., Nos. 5, 15c.; 6, 14c.; 7 and 8, 13c.; 9 to 12, 12c.; f.o.b. Winnipeg. Discounts on application. No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per pound. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Quoted now at $2.80 per keg.

CUT NAILS.—Recently advanced to $2.90 per keg.

PRESSED SPIKES — Prices are quoted as follows since the recent advance: ¼ x 5 and 6, $4.75; 5-6 x 5, 6 and 7, $4.40; ⅜ x 6, 7 and 8, $4.25; 7-16 x 7 and 9, $4.15; ½ x 8, 9, 10 and 12, $4.05; ⅝ x 10 and 12, $3.90. All other lengths 25c. extra net.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows: Bolts, carriage, ⅜ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅜ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½; hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS. Prices on copper rivets have been increased and revised quotations are: Iron, discounts, 60 and 10 p.c.; copper, No. 7, 43c; No. 8, 43½c; No. 9, 45½c.; copper, No. 10, 47c.; copper, No. 12, 50½c.; assorted, No. 8, 44½c., and No. 10, 48c.

COIL CHAIN.—Prices have been revised, the general effect being an advance. Quotations now are: ¼ inch $7.00; 5-16, $5.35; ⅜, $4.75; 7-16, $4.50; ½, $4.25; 9-16, $4.20; ⅝, $4.25; ¾, $4.10.

SHOVELS—List has advanced $1 per dozen on all spades, shovels and scoops.

HARVEST TOOLS — Discounts continue as before, 60 and 5 per cent.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES.—Quotations are: Bench axes, 40; broad axes, 25 p.c. dis. off list; Royal Oak, per dozen, $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $8.25; Columbian, $9.50; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.75; Copper King, $11 per dozen.

BUTTS—The discount on wrought iron butts is 65 and 5 p.c.

CHURNS — The discounts from list continue as before: 45 and 5 per cent.; but the list has been advanced and is now as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

CHISELS—Quoted at 70 p.c. off list prices.

AUGER BITS—Discount on "Irwin" bits is 47½ per cent., and on other lines 70 per cent.

BLOCKS—Discount on steel blocks is 35 p.c. off list prices; on wood, 55 p.c.

FITTINGS—Discounts continue as follows: Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

GRINDSTONES.—Quoted now at 1½c. per lb.

FORK HANDLES—The discount is 40 p.c. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 p.c. off list prices.

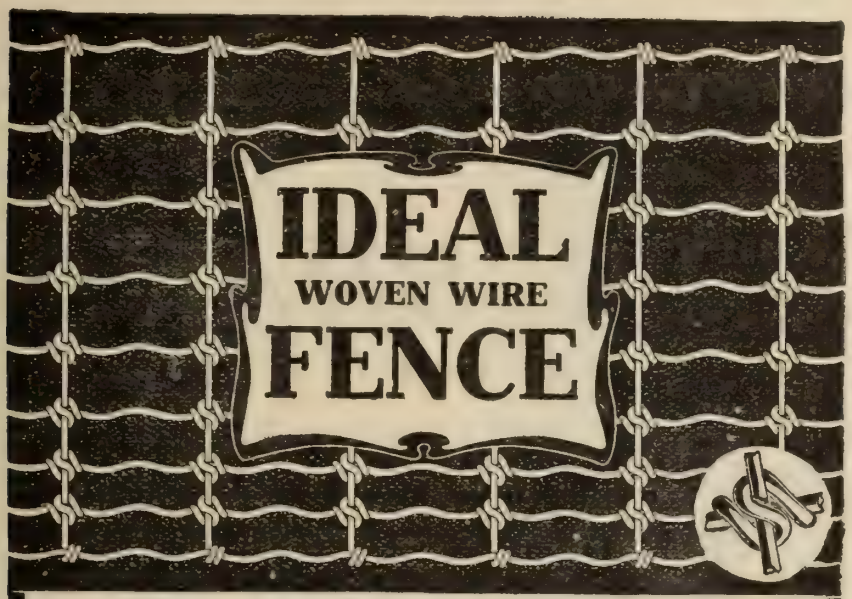
HOOKS—Prices are quoted as follows: Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

CLEVISES—Price is now 6½c. per lb.

STOVE PIPES—Quotations are as follows: 6-inch, per 100 feet length, $9; 7-inch, $9.75.

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discount is 50 per cent.



WASHERS—On small quantities the discount is 35 p.c.; on full boxes it is 40 p.c.

WRINGERS — Prices have been advanced $2 per dozen, and quotations are

SUPERB EMPIRE
The Perfect Cooker

We draw the attention of the Western Trade to the Superb Empire Planished Steel Range. The oven door is not only braced but also spring balanced. A lever is attached to the front key-plate to raise it as desired, and contrived also to hold it up if necessary. The Superb throughout is substantial, its nickel dress alone making it a ready seller, besides, it is made by a Western stove factory for Western people only.

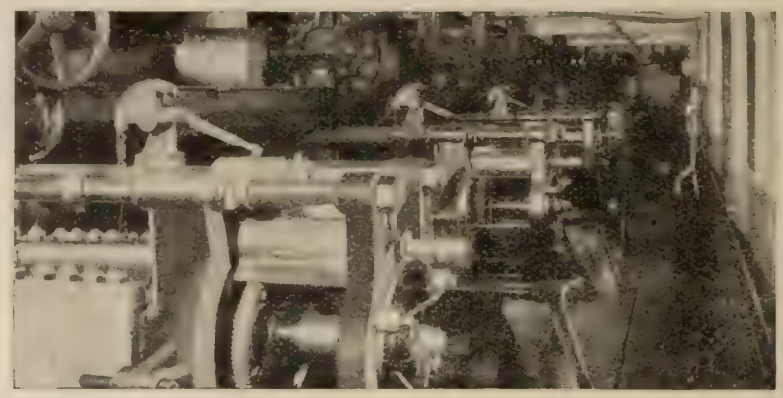
FOUNDRY AND METAL INDUSTRIES

An English syndicate will absorb many large steel plants in B.C., and also take over great coal and iron areas.

An employee of the Canada Foundry, Toronto, was working on a crane doing some riveting on Wednesday, when he fell twenty feet, fracturing his skull. He is expected to recover.

The production of lead in Canada for the year 1906 amounts to 26,000 tons. The production for 1905 was 27,000 tons. The record year was 1900, when a total of 30,000 tons was reached.

The rail mill of the Lake Superior Corporation has been turning out 700 to 750 tons a day. The rail output this month is expected to run 18,000 tons against 16,700 tons the previous high record.



Another rich discovery of iron ore has been made near Port Arthur, which has proven to be the most extensive and highest grade ore found in that section. Samples of the red-ore will assay 60 per cent. iron.

The total output of coal in Nova Scotia for 1906 amounted in round numbers to 5,170,000 tons, an increase of 488,000 over 1905. The Cape Breton mines gave an increase of 352,000 tons, Pictou 88,500, Cumberland decrease, 34,506, Inverness 80,000.

Geo. S. Wynne has been appointed acting general manager of the Lake Superior Corporation in place of Mr. Sawyer, who has returned to Pittsburg. The general superintendent will be in full charge of the subsidiary companies and report to Mr. Wynne. The executive are still on the lookout for a general manager for the whole concern.

An 18-foot seam of iron ore, located at Barachois, C.B., has lately been discovered. Samples of the ore were supplied the Dominion Iron and Steel Company for analysis, but their report as to the quality of the rock was not satisfactory to the promoters, and test loads were then sent to Sydney Mines for a like purpose. The report from there was that the ore was of a good quality and unique for the purpose of mixing with the Wabana ore in the manufacture of bessemer pig.

Sherwin-Williams Screw Press Linseed Oil is a *Better* Linseed Oil

WE are now making linseed oil for our Canadian trade and for use in our own paints and varnishes at our Montreal plant. This oil is made by the "screw press process", a new process controlled exclusively by us in the Dominion.

By the "screw press process" we are able to extract from the flax seed a *better* quality of linseed oil than heretofore possible, because the oil is extracted at a low temperature. In all other processes the seed is heated to a high temperature to secure a satisfactory yield of oil per bushel of seed. Where the seed is highly heated, the albumen and mucilaginous matter are freed and allowed to go into the oil. This foreign matter in the oil assists in the disintegration of the paint or varnish film. *The "screw press process" leaves this matter in the meal.*

We have illustrated printed matter that tells about our new process, the kind of seed we use, our method of cleaning it, and the oils we manufacture. Write us for particulars if you are interested in *better* linseed oil for your trade.

1799

HARD GENUINE BABBITT.

As made by the inventor, Isaac Babbitt, genuine babbitt metal was a soft mixture and was really nothing but pewter. The mixture which he used was composed of 50 parts of tin, 5 parts of antimony and 1 part of copper. This mixture, while suitable for many uses, utterly fails to meet the requirements of others. Even the so-called standard mixture of the present time, which consists of 96 parts of tin, 8 parts of antimony, and 4 parts of copper does not always serve the purpose.

A hard genuine babitt which will give the best service that it is possible to obtain, except in cases of severe pounding, is made of the following: Tin, 100 lbs.; antimony, 8 lbs.; copper, 8 lbs.

This mixture will stand hammering into the recesses of the lock and will wear without cracking.—Brass World.

PONDEROUS STEAM SHOVELS.

As an illustration of the rapid rate at which railroad building is going forward in Canada might be mentioned the contracts for steam shovels recently placed with the Canada Foundry Company by the Canadian Pacific Railway, the Canadian Northern, and several firms of railway contractors. The building of large steam shovels is a new industry, as far as this country is concerned, the shovels heretofore used on heavy construction work having been imported. The Canada Foundry Company, however, has established a special department for the construction of steam shovels. These implements are known as the Bucyrus steam shovels, which are ponderous machines weighing 90 tons apiece, and three loads of the dipper more than fill a flat car.

A photograph in the possession of the Canada Foundry Company tells more graphically than words the speed at which the Bucyrus shovels excavate the earth. The picture was taken as a string of flat cars was backing down a track beside one of the monster shovels, which kept on working as the cars passed it, and on each car was placed a load from the dipper.

TO PRESERVE IRON AGAINST RUST.

To preserve iron against rust, immerse it for a few minutes in a solution of blue vitriol, then in a solution of hyposulphite of soda, acidulated with chlorhydric acid, says the Inland Printer. This gives a blue-black coating, which neither air nor water will affect.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

A new Y.M.C.A. building will be erected in Montreal at the cost of $300,000

The Vancouver Portland Cement Company, operating at Tod Inlet, B.C., are enlarging their plant.

The Mickle-Dyment planing factory at Brantford will have a $10,000 extension made in the Spring.

The Dominion Radiator Company has taken out a permit for the erection of a plant to cost $160,000, in Toronto.

Tenders are asked for the erection of a large factory building on Carlaw Ave., Toronto, for the Phillips Manufacturing Company.

The work which the Canada Foundry Company, of Toronto, have been doing on the blast furnace at Port Arthur is completed.

The Dominion Carriage Company, Truro, N.S., recently organized, with a capital of $250,000, will erect new building in the Spring.

Weyburn leads all towns in southern Saskatchewan in building operations during 1906, and is fourth in the whole province, the total amount being $303,000.

The statement for the foreign trade of Canada for the six months ending with December 31, shows an increase in exports of $12,890,000, and in imports of $30,124,000.

The county of Wentworth has decided to build a house of refuge. The building will cost between $35,000 and $40,000, and it is proposed to have a farm of 125 acres in connection.

The Toronto Electric Light Company will apply to the Ontario Government for an increase in its capital stock of $1,000,000, which will bring the total capitalization to $4,000,000.

Arcola, Sask., has, in keeping with the general progress of the west, made rapid strides during the past year. Something over $190,000 has been put in buildings and other improvements.

The Canada Cycle and Motor Company, of Toronto Junction, has purchased property in Ottawa, and will erect showrooms, and repair shop, expecting to be open for business in the Spring.

A large bank building will be erected at Victoria, B.C., by the Royal Bank of Canada. The Bank of Nova Scotia have also purchased property on King street, Toronto, and will erect a bank building.

The Canadian Pacific Railway Co. will build a new depot at Calgary, Alta. It is estimated that the structure will cost $200,000, and outside of Winnipeg will be the finest on their western lines, and one of the finest on the whole system.

The new building just completed for the Toronto Type Foundry Company, Toronto, is one of the largest in the city, being 168x85 feet. The whole structure is built largely of concrete, more than 500 barrels of cement being used.

The Galt Art Metal Company have succeeded in carrying off the contracts for all sheet metal work, such as cornices, ceiling, etc., on all four Normal schools to be erected at Hamilton, Stratford, Peterboro and North Bay, amounting to between $16,000 and $18,000.

When the Galt Malleable Iron Works opened in October last 25 men were employed. Last pay-day at the works 132 regularly employed workmen received their pay envelopes, an increase of over 400 per cent. in the number of employes.

A grant of $50,000 has been made for the erection of a hygienic institute at London by the Provincial Government. Besides the $50,000 for building, an annual grant for five years of $5,000 a year will be made for maintenance by the Government.

The plant of the Canadian Glass Works, located on the outskirts of Montreal, and employing about 150 hands, was burned to the ground on Wednesday. The loss is in the neighborhood of $20,000 on the plant and equipment and is covered by insurance.

Messrs. Ney, Camp and Company have been incorporated with a capital of $40,000 for the purpose of manufacturing furniture, etc. The head office will be at Stratford, and provisional directors being, W. J. Ney, N. W. Camp and J. H. Bamber, Stratford.

The Imperial Steel and Barb Wire Co., of Collingwood, is looking for a suitable point in the west to establish a plant for the manufacture of barb wire and nails. The company is looking for inducements, guaranteeing to employ 100 to 200 men all the year round.

A large, four-storey building in Hamilton will be erected in the Spring, and will be sub-let to small manufacturers. This proposition should meet with great success, as small manufacturers are frequently handicapped by being unable to get suitable buildings in starting out.

The Collingwood Shipping Co. has been incorporated with a capital of $90,000, for the purpose of constructing elevators, wharves, docks, warehouses, etc. The head office will be at Collingwood, and provisional directors being, W. T. Allan, M. Brophy and W. A. Hogg, of Collingwood.

The Dominion Bearing Company, of St. Catharines, are manufacturing automobile equipment, engines, running gear and bearings for supply to a selling concern. The company will shortly place on the market an improved roller bearing. About eighteen men are now employed in the works.

The Standard Concrete Construction Company, Toronto, has been incorporated with a capital of $100,000, for the purpose of general building and construction. The head office will be at Toronto, and provisional directors being, F. Rielly, J. B. Bartram and E. A. Scott, Toronto.

The Brandon and Robertson Manufacturing Company has been incorporated with a capital of $75,000, for the purpose of manufacturing implements, machinery, etc., the head office to be at Brandon, Man,, and provisional directors being, W. Brandon, J. A. Robertson and R. J. Brandon, of Brandon, Man.

The Ham & Nott Company, of Brantford, are about to build a large factory in Ottawa. The new factory will manufacture bee-keeping supplies, spring beds, and screen doors, and will employ over one hundred hands while in full operation. Arrangements are now being made with regard to a suitable site and other features.

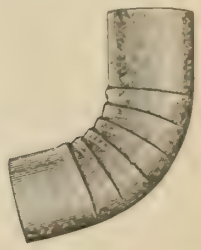
The Montreal Wood Mosaic Flooring Company has been incorporated, with a capital stock of $5,000, for the purpose of manufacturing wood flooring, window and door screens, steel mats, etc. The head office will be at Montreal, the directors being, A. McLean, Buffalo, and D. H. McLennan, C. Stewart and R. W. Barclay, of Montreal.

The North Shore Transportation and Wreckage Company, Quebec, has been incorporated, with a capital stock of $250,000, for the purpose of manufacturing vessels, steamboats, machinery, etc., and to construct wharves, piers, warehouses, etc. The head office will be in Quebec, the directors being, J. A. Fafard, O. C. Bernier and A. Tegnon, of Quebec.

An agreement has been signed with the town council of Welland by E. Billings, of the Spencer Company, of Hartford, Conn., the largest manufacturers of drop forgings in the United States, to locate there. The branch will be known as the Canadian Billings and Spencer Company, and plans for a plant to cost about $100,000 will be prepared at once.

The Dominion Graphite Company, of New York, will erect a large mill, representing an outlay of nearly a million dollars for the treatment of graphite, to be mined in the Laurentian ranges near Buckingham, Que. Not long ago the Dry Concentrating Company, of New York, announced their intention of erecting a smelter with the same object in view, and both plants are now in course of construction.

The recently instituted Carleton Place Board of Trade, has completed organization, with Frank Taylor, of Taylor Bros., hardware merchants, as secretary, and W. J. Muirhead, another hardware dealer, as one of the executive. Forty members have already allied themselves to the new board. A resolution was passed endorsing the proposed by-law to loan Bates & Innes $10,000 for ten years to assist them in starting the Gillies woolen mill.



A new apartment block will be erected in Winnipeg which will accommodate one hundred families and will be furnished throughout with every known modern device for the comfort and convenience of its tenants, including electric elevators, window cleaning, janitor service, telephone in every suite, giving free service over the entire building, and connecting with outside service by means of a private switchboard; mail chutes in every corridor, auto garage in basement, bell boys, dance hall, and roof garden, all free to the use of the tenants.

The manufacturing and retail trade interests of Quebec held a mass meeting of citizens recently after church service to protest against the proposed conversion of the Plains of Abraham and Coverfields into a national park, as it would mean the strangulation of the Ross rifle factory, the laboratories of the Quebec cartridge factory, and a blow to Quebec manufacturing industries in general. The committee who wish to propagate the national park in question are expecting one million dollars aid from the Dominion Government. George E. Amyot, president of the Qdebec Board of Trade, presided. Resolutions were adopted requesting the Dominion Government to grant the request of the Ross Rifle Company for an additional area of land, about three acres, in the Coverfields. About fourteen hundred were present.

The acquisition of the Qu'Appelle, Long Lake and Saskatchewan Railway by the Canadian Northern Company has already resulted in substantial reductions in passenger, freight and express rates. The Canadian Pacific Railway, which formerly operated the line, charged 4 cents per mile for single fares, and this has been reduced to 3½ cents by the C. N.R. The reduction in freight rates is about 20 per cent., while the express charges have been reduced 10 to 33 per cent. The service they have maintained so far has been unsatisfactory, both to the public and to the C.N.R. Passenger trains have on occasions since Jan. 1, taken two to three days to travel from Prince Albert to Regina, a distance of 254 miles. Snow blockades and the lack of coal have been the principal hindrances, while the continued cold weather has played havoc with the motive power supplied for the division. It is understood that the company is making some progress in its efforts to clear the line and restore the normal service. But in the meantime there is great inconvenience and in some cases actual hardship among the residents in towns and villages along the route.

NEW ZEALAND'S EXHIBITION.

The New Zealand international exhibition, now being held at Christchurch, New Zealand, is of much larger proportions than was anticipated, and the Government is well pleased with the response to the invitation to participate. The largest section of the exhibition is that occupied by Canada. It contains a floor area of 17,000 square feet, while the surrounding walls afford a space of 5,000 square feet, which have been handsomely decorated with bunting, pictures, charts, etc., all of which will prove an interesting and educational feature. The following are some of the Canadian manufacturers who are represented in in the Canadian court: The Canadian Rubber Company, Victoria Wheel Works, Pacific Coast Pipe Company, The Dodge Mfg. Co., The Montreal Rolling Mills, Dowswell Mfg. Co., Berlin Rubber Company, R. MacDougall Co., Stauntons, Chestnut Canoe Co., Peterboro Canoe Co., E. T. Wright & Co., D. Maxwell & Co., Canada Cycle and Motor Co., McClary Mfg. Co., Metallic Roofing Co., The Waggoner Ladder Company, Imperial Oil Company, Hart Corundum Company. The mineral exhibit is attracting great attention, particularly the exhibits of asbestos, mica, corundum and nickel, these being to a certain extent new minerals to New Zealanders. This exhibit occupies a space of 3,191 feet, and consists of thirty-five pyramids and stands. Among the more prominent exhibits are gold quartz from Nova Scotia, Ontario and British Columbia; nuggets from Quebec, British Columbia and the Yukon; gold-copper ores and silver lead ores, British Columbia; copper ores, Nova Scotia, Ontario and British Columbia; zinc ores, Ontario and Bri-

Hardware Dealers Should Wake Up—

to the fact that **SHEET METAL BUILDING GOODS** could be made a large and ever increasing factor in their business. Farmers, manufacturers and all owners and builders are daily demanding these goods because they fill satisfactorily the gap which is being left by the diminishing supply of good and cheap timber. Some dealers have already established a considerable trade in this line, proving that it can be done, but it's "only as a drop in the bucket" compared to what's to come. If the **HARDWARE DEALERS** and **TINSMITHS** don't look after this valuable trade, they will live to regret it. **Some one else will reap the harvest.**

Don't say—"**There's nothing in it for me**"—because there certainly is, providing you have the **RIGHT GOODS** and the **RIGHT FIRM** behind them. It doesn't matter about the manufacturers who sell direct to the consumer. One good, square firm, who will **PROTECT** and **HELP** a good orginization of agents, can, with those agents, do more business than three or four of the other kind.

We can show you—all we need to prove to you how this combination will work in 1907 is some more good agents—we've got the goods and the other qualifications. One of our representatives will be along your way soon after New Years to talk to you on the subject. If you are interested drop us a line at once and make certain that you will not be missed.

METHODS OF MAKING WHITE LEAD.

White lead, or carbonate of lead, is made from the metal by two methods, the second of which is merely a development of the first. The first, or old Dutch method, is still widely used, and has been the way of manufacture perhaps since the Roman times, the Dutch centuries ago learning it from the Venetians.

The metallic lead is cast into the form of star gratings, or thin perforated sheets, in such a way as to render quite easy its conversion into the carbonate. These pieces of lead are placed in small earthenware jars resembling flower pots about six inches deep, and wider at the top than at the bottom. A piece of wood is placed in the pot so as to confine the lead to the upper portions thereof. Some acetic acid (vinegar) is then poured into the bottom of the vessel, the lead placed in the upper part occupying about two-thirds of the jar, and kept from the vinegar by the wood, and a slab of lead is placed on top. These jars are then arranged in parallel rows, forming a square tier of about 20 feet each way, or 400 altogether, and the whole covered with tan bark or stable litter; another tier is placed on the top of the first and treated likewise. This process is repeated until there is a pile eight or ten tiers high formed, all embedded in the litter.

Left to themselves for six or eight weeks, the fermentation of the litter keeps up a suitable temperature and a constant supply of carbonic acid. The vinegar in the jars is converted into gas by the heat, and this aided by the imprisoned air, attacks the lead, which becomes thickly coated with a white substance (basic acetate.) The carbonic acid given off from the hotbed in turn converts this basic acetate into the carbonate of white lead.

During the whole of the six or eight weeks this constant action and reaction continues until the whole of the metallic lead is changed into the white lead. After this is completed the pots are emptied and the newly made carbonate of lead broken up and ground in water to a fine paste. It is then placed in little conical moulds and allowed to dry. It is then ready for use, and is what is called dry white lead.

Some years since this was an extensive industry in Holland and numerous factories had their existence around Rotterdam. But of late years white lead manufacturing is being conducted extensively in Prussia, Great Britain, and the United States, causing the Dutch industry to dwindle down to smaller proportions. In Saxony and Prussia, and also in Great Britain and the United States, the second method, which is merely a development of the first, is followed. The factory is a two-storey building the ground floor of which is occupied by a furnace. The floor of the upper chamber is composed of boards loosely arranged so that the heat may readily pass through from the furnace beneath. Square or rectangular watertight boxes with numerous openings on top are placed on the first floor. Above these are erected frameworks reaching to the roof, to which short sticks are attached in such a way as to enable them to sustain the bars of thin sheets of lead above the boxes. Some unfermented grape or raisin juice or cider is placed in the boxes, and this is made to ferment by the action of the heat from the furnace. The fumes from the grape juice together with the oxygen in the air decompose the lead, changing it to the carbonate. This falls in flakes to the floor, where it can be gathered by the workmen, broken into fine particles, ground in water and dried in the moulds; it is then ready for shipment.

NEW PAINT FACTORY IN B.C.

The purchase of the Dominion Paint Company's premises, at Victoria, B.C., by W. E. Staneland a short time ago, promises to add another flourishing industry to the commerce of that city.

Mr. Staneland, who has been with P. McQuade & Co. for seven years, and with paint businesses all his life, will at once extend the business carried on by W. T. Andrews. While retaining the latter's agency for Burrell & Co., of London, Eng., Mr. Staneland will go into the manufacture of high-grade pure prepared paints, which he will put on the market as the Staneland paints. He is adding seventy-five feet to his warehouse, and is installing an iron and tin plant.

A NEW USE FOR GLUE.

An application for burns can be made, it is said, by taking fifteen ounces of the best glue, breaking it into small pieces and adding two pints of water. This having become soft, should be dissolved by means of a water bath; two ounces of glycerine and six drachms of carbolic acid should be added, and the heat continued until the whole is thoroughly dissolved. On cooling this mixture hardens to an elastic mass, covered with a shining parchment-like skin, and may be kept for any length of time. When required for use it is placed for a few minutes in a water bath until sufficiently liquid, and applied by means of a brush. In about two minutes it forms a shining, smooth, flexible and nearly transparent skin.

ANOTHER RUBBER MERGER.

The Canadian Consolidated Rubber Company, Montreal, will in the near future absorb the Merchants and Berlin Rubber Companies, of Berlin, which have a capital of $500,000, and employ 600 hands. The two companies have been purchased by interests friendly to the Consolidated Company, and officials of the latter do not deny that the ultimate object is the consolidation of the two companies named with the larger concern.

BRANDRAM BROS. & Co
BRANDRAM'S B. B. WHITE LEAD
MANUFACTURERS LONDON ENGLAND

An Important Announcement regarding "Anchor" and "English" Liquid House Paints.

FOR some time we have been supplying the trade with Paints put up under both brands, but for various reasons we find it advisable to sell hereafter only **"ENGLISH" LIQUID HOUSE PAINTS**. The two brands were identical in quality, the only White Lead used in their manufacture being Brandram's B. B. Genuine White Lead, the world's standard for close on to two centuries. So when we sell you **"ENGLISH" LIQUID HOUSE PAINTS** in place of "ANCHOR," you will know that you are getting the same Paints as you ordered under "ANCHOR," and we would ask you to get into the way of specifying **"ENGLISH"** in your orders in place of "ANCHOR." We would also ask you to tell your cnstomers that **"ANCHOR"** Liquid **House** Paints are now called **"ENGLISH,"** and so assist us to familiarize consumers with the name **"ENGLISH"** as the name of the leading brand of **LIQUID HOUSE PAINTS**.

We maintain the **"ANCHOR"** trade mark on all our other Specialties.

Paint and Oil Markets

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, February 1, 1907

The only change in prices to be recorded this week is the advance in Paris green of one cent per pound, which was received too late for publication in our issue of Jan. 26th. This advance, instead of acting as a detriment to sales, has given feeling to the market, and orders are pouring in, both for immediate and spring shipment.

General lines are not over active as far as shipping is concerned, but manufacturers report a good volume of trade for later shipments, and the market generally may be noted as firm and strong.

LINSEED OIL—No change in prices. We still quote: Raw, 1 to 4 barrels, 55c; 5 to 9 barrels, 54c.; boiled, 1 to 4 barrels, 58c.; 5 to 9 barrels, 57c.

TURPENTINE—(In barrels.) Last week's advance of one cent per gallon still holds. Our prices are: Single barrel, 98c. per gal.; for smaller quantities than barrels, 5c. extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

GROUND WHITE LEAD—Expected advance has not yet arrived. Our prices remain: Best brands Government Standard, $7.25 to $7.50; No. 1, $6.90 to $7.15; No. 2. $6.55 to $6.90; No. 3, $6.30 to $6.55, all f.o.b., Montreal.

DRY WHITE ZINC—Still firm. We quote: V.M. Red Seal, 7½c to 8c; Red Seal, 7c to 8c; French V.M., 6c to 7c; Lehigh, 5c to 6c.

WHITE ZINC—Our quotations are: Pure, 8½c. to 9½c.; No. 1, 7c. to 8c.; No. 2, 5¾c. to 6¾c.

PUTTY.—Our prices are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladder putty in barrels, $1.75.

ORANGE MINERAL—The following prices still hold: Casks, 8c; 100'lb. kegs, 8½c.

RED LEAD—The following quotations are firm: Genuine red lead in casks, $6.00; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs $6, and smaller quantities, $6.75.

PARIS GREEN—Advanced one cent per pound, and orders pouring in. Our prices now are: In barrels, about 600 pounds, 23½c. per lb.; in arsenic kegs, 250 lbs., 23½c.; in 50 lb. drums, 24c.; in 25 lb. drums, 24½c.; in 1 lb. packets, 100 lbs. in case, 25c.; in 1 lb packets, 50 lbs in case, 25½c.; in ½ lb. packets, 100 lbs in case, 27c.; in 1 lb. tins, 26c. f.o.b. Montreal. Term three months net or 2 per cent. 30 days.

SHELLAC—Prices remain: Bleached in bars or ground, 46c. per lb., f.o.b. Eastern Canadian points; bone dry, 57c per lb., f.o.b. Eastern Canadian points; T. N. orange, etc., 48c per lb. f.o.b. New York.

SHELLAC VARNISH—Very firm. We still quote: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Business good; no change in prices. We still quote: $1.20 to $1.50 per gallon.

CASTOR OIL—Our prices are: Firsts in cases, 8½c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

BENZINE— In bbls.)—We still quote: 20 cents per gallon.

GASOLINE—(In bbls.)—Our price is 22½ cents per gallon.

PETROLEUM—(In barrels) Our prices are: American prime white coal, 15½c. per gallon. American water, 17c. per gallon; Pratt's Astral, 19½c. per gallon.

WINDOW GLASS — Prices remain firm. We still quote: First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.20; second break, 100 feet, $3.40; third break, 100 feet, $3.95; fourth break, 100 feet, $4.15; fifth break, 100 feet, $4.40; sixth break, 100 feet, $4.95. Diamond Star: First break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second break, $4.80; third break, 100 feet, $5.75; fourth break, 100 feet, $6.50; fifth break, 100 feet, $7.50; sixth break, 100 feet, $7.50; seventh break, 100 feet, $8; eighth break, 100 feet, $9. Double Diamond: First break, 50 feet, $3.45; second break, 50 feet, $3.75; first break, 100 feet, $6.75; second break, 100 feet, $7.25; third break, 100 feet, $8.75; fourth break, 100 feet, $10; fifth break, 100 feet, $11.50; sixth break, 100 feet, $12.50; seventh break, 100 feet, $14; eighth break, 100 feet, $16.50; ninth break, 100 feet, $18; tenth break, 100 feet, $20; eleventh break, 100 feet, $24; twelfth break, 100 feet, $28.50. Discount on Diamond Star, 20 per cent.; on Double Diamond, 40 per cent.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, February 1, 1907

The paint trade continues very brisk with continued large orders for Spring shipment. The orders for paint this season are much more numerous than previous years, and much larger quantities are being ordered.

White lead is also selling very rapidly. While the recent 15c. advance of lead in Montreal has not been followed here as yet, merchants throughout the country are ordering very briskly in view of the advance in prices which must take place.

Turpentine remains very firm. Very little ordering is being done for turps at present, which are quoted at an advance of ½c. per gallon in Savannah over

RAMSAY'S PAINTS

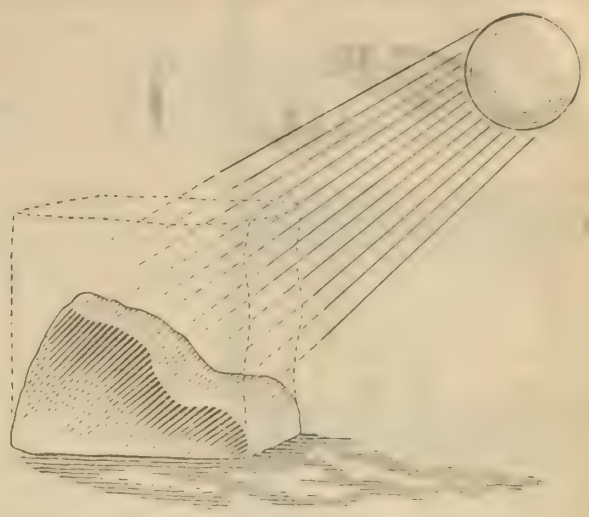
In every talk with a customer about paints there must be behind it a stock that stands for quality and satisfaction. A paint must be made right to sell right—made to withstand the storms of rain and snow, as well as burning sun. With Ramsay Paints goes a guarantee of satisfaction. The Ramsay Paints have been made in Canada since 1842—made for Canadian weather—made properly. They are not dear paints. They are not cheap paints. The price is right for proper selling of the right paint. The quality of the Ramsay Paints remains long after the price is forgotten.

Let us tell you all about it.

A. RAMSAY & SON COMPANY

Est. 1842 MONTREAL PAINT MAKERS

Just try some ordinary green paint on a panel of wood, see how hard it works,—don't cover, lacks body. Then try on another panel



LUCAS IMPERIAL FRENCH GRAIN

notice how easy it spreads, how well it covers,—that's body. Makes the cost less for this reason alone, and stays fresh and brilliant. It preserves the wood, keeps the weather out and the color in. It is the **ONE** Green that is free from arsenic or verdigris.

last week's price. Merchants will no doubt have to watch very carefully for the cheaper and adulterated grades of turpentine which will be placed on the market as a result of the advanced prices.

The sale of Paris green continues large in spite of the high prices.

The Standard Oil Company have announced an advance of a quarter-cent a gallon on all grades of refined oil, naphtha and gasolene in barrels, owing to the higher price of barrels.

WHITE LEAD—Ex Toronto pure white, $7.40; No. 1, $6.65; No. 2, $6.25; No. 3, $5.90; No. 4, $5.65 in packages of 25 pounds and upwards; 1-2c per pound extra will be charged for 12 1-2 pound packages; genuine dry white lead in casks, $7.00.

RED LEAD—Genuine in casks of 500 lbs., $6.00; ditto, in kegs of 100 lbs., $6.50; No. 1 in casks of 500 lbs., $5.75; ditto, in kegs of 100 lbs., $6.25. Litharge, 6½ cents lb.

DRY WHITE ZINC— In casks, 7 1-2c.; in 100 lbs., 8c., No. 1, in casks 6 1-2c., in 100 lbs., 7c.

WHITE ZINC (ground in oil)—In 25-lb. irons, 8c.; in 12 1-2 lbs., 8 1-2c.

SHINGLE STAIN—In 5-gallon lots, 75c. to 80c. per gallon.

PARIS WHITE—90c. in barrels to $1.25 per 100 lbs.

WHITING—60c. per 100 lbs. in barrels; Gilders' bolted whiting, 90c. in barrels, $1.15 in smaller quantities.

SHELLAC VARNISH—Pure orange in barrels, $2.70; white, $2.82 1-2 per barrel; No. 1 (orange) $2.50; gum shellac, bone dry, 63c., Toronto. T. N. (orange) 51c. net Toronto.

LINSEED OIL—No advance has been made lately. Very little selling at present, prices remaining at former quotations: Raw, 1 to 3 barrels, 58c.; 4 to 7 barrels, 57c.; 8 and over, 56c, add 3c. to this price for boiled oil. Toronto, Hamilton, London and Guelph net 30 days.

TURPENTINE — Has experienced a vannah, but this will have no present small advance of ¼c. per gallon in Saeffect here. Very little is being sold at present, but prices remain steady at last week's quotations. Single barrels, $1.02 per gallon f.o.b. point of shipment, net 30 days. Less than barrels, $1.07 per gallon.

GLUES—French Medal, 12 1-2c. per pound; domestic sheet, 10 1-2c. per lb.

PUTTY—Ordinary, 800 casks, $1.50; 100 drums, $1.75; barrels or bladders, $1.75; 100-lb. cases, $1.90;; 25-lb. irons, $1.85; 25-lb. tins (4 to case) $1.90; 12 ½ lb. tins (8 to case) $2.10.

LIQUID PAINTS—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

BARN PAINTS—Gals., 70c. to 80c.

BRIDGE PAINTS—Gals., 75c. to $1.

CASTOR OIL—English, in cases, 10½ to 11 cents per lb., and 12 cents for single tins.

PARIS GREEN—Last week's advance of 1 cent per pound on green has encouraged many dealers who were holding off to buy now. The great majority of merchants, however, had stock ordered.

REFINED PETROLEUM — Dealers are stocking up heavily for the Winter. We still quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM — We quote: Canadian, $1.32; Pennsylvania, $1.58; Ohio, 96c.

CENTRALIZATION HELPS TO SUCCESS.

Centralization is the keynote of business to-day. It is shown as much in the retail trade of the rural village as in the big commercial organizations of the country. In most instances it is the solution of the problem of diminishing trade and profits. To compete successfully in the market the merchant of the village, of the town, or of the city, must carry as few lines as possible. He must cut down his stock to the products of as few manufacturers in the same line as possible. He must centralize his selling force. In this way only, can he put the necessary energy and life into the sale of goods. This centralization is not effected by cutting down the number of classes of goods carried by the merchant, but in cutting down the number of lines of each class of goods. Instead of handling half a dozen or more half lines, he carries one full line. The merchant with one full line of each class of goods with the products of but one mandfacturer, always providing, of course, that the products will give his customers satisfaction, is in a much stronger position that the merchant loaded down with the goods of various makers.

He can much easier and much better advertise one full line than several short lines. Every effort made to sell one article, every sale made, advertises all the other products of the line in his stock. And, the very fact that he carries a full line shows that he has confidence in the goods, and is an argument to the prospective buyer of every article in the line. One full line requires less investment and minimizes the likelihood of carrying over stock. The merchant who confines his stock to one full line avoids delay in shipping, shortage, errors in filling orders, etc. He finds it easier to take care of his trade.

The manufacturer can deal much more liberally with the merchant who carries his products only in stock. Much closer co-operation is possible in going after trade. The manufacturer is assured of the merchant's loyalty—their interests are common—and he can advertise thoroughly in the dealer's territory without the risk of promoting the sale of competitor's goods. The paint trade affords a very good instance of the tendency towards centralization of interests and of the benefits derived. The large paint concerns are appointing agents in each town, giving them a monopoly on their complete line, working hand-in-hand with them for the sale of their goods. The plan has proved generally successful, the dealer recognizing the material advantage it affords.

Never stop to think if you expect to win the race.

Plumbing and Steamfitting

THE PLUMBING OF A COTTAGE

By J. A. F. Cardiff in the National Builder, Chicago

Article XV.

With this instalment we will commence the consideration of the water supply system of a cottage.

Figure 60 represents a section of a modern cottage having the usual amount of plumbing fixtures, and shows a system of piping for the supply and distribution of cold water, the supply being taken from the city water main. In this case it is assumed that the pressure in the mains is ample to raise the water to the highest fixture in the building.

The illustration provides for a simple system of piping such as is commonly required. The street main is tapped and a one and one-half-inch service pipe is run in through the front foundation wall and through the cellar to the bases of the various risers. Just inside the front wall a stop and waste cock is

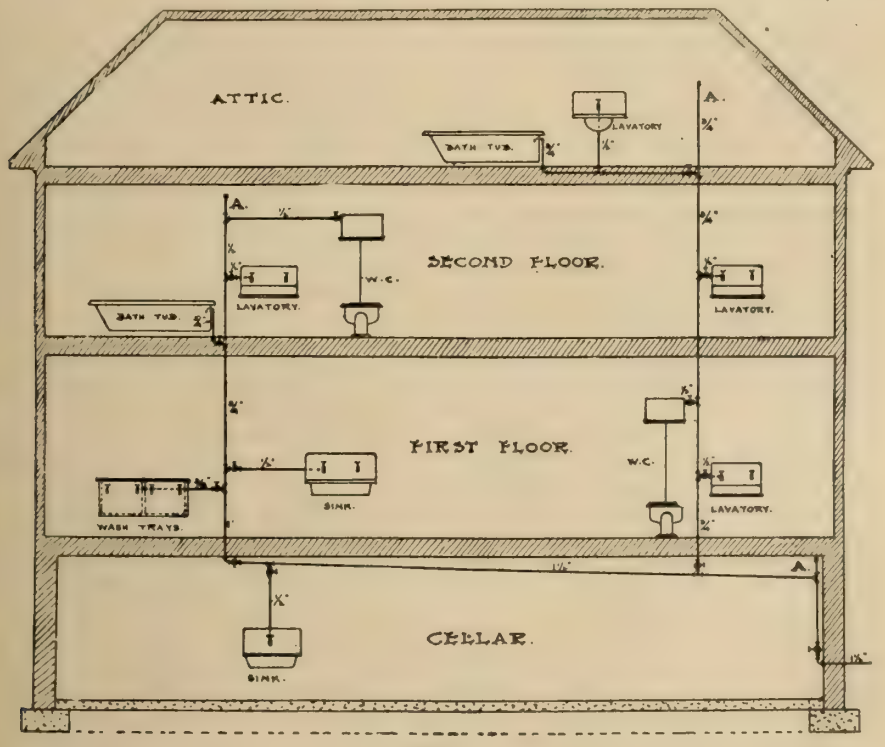

FIG 60

provided to shut off the entire supply. All piping is graded to this cock so that the entire system may be drained dry. Two risers are carried up to the two stacks of fixtures and are provided with stop cocks at their bases so that either riser may be shut off independently of the other. These risers decrease in size as the various branches are taken off, and at the top of each, where marked "A," the pipe is extended so as to form an air chamber to prevent water hammer. A similar air chamber is provided near where the service pipe passes through the front wall.

Branches to all fixtures, except those in the attic, are provided with individual stop cocks so that any one fixture may be cut off for repairs, etc. The branch supply to the attic fixtures has one stop cock for the two fixtures. Stop cocks on all branches are very desirable, as they greatly facilitate repairs. They are particularly desirable on the supply to a water closet tank, as the ball cocks or tank valves generally require repairs more frequently than any other fixtures.

A more detailed description of the work will be given in future articles.

A NOTABLE SEWER CONNECTION.

For a number of years a hotel occupied largely during the summer season and equipped with some 250 fixtures, carried its sewage for some distance in a 10-in. pipe, where it was allowed to discharge without further attention. Recently the owners of the property on which the sewage was discharged notified the hotel owners that some other disposition must be made of the sewage. The old outlet was within about 600ft. of a sewer, and when the hotel owners called upon the plumber for a solution of their problem he found a right of way for a sewer connection and fortunately the ground sloped toward the sewer with rather a sharp fall in the last 150 or 200 feet. The item of expense was an important one, and to carry a 10 in. pipe would have entailed a considerable cost and such a connection would have been rather large in comparison with the size of the branch sewer with which it was to be connected.

Reducing the Pipe Size Successively.

The plumber was one of a class who studied the various problems in his field of enterprise and was a wide reader of the trade press and the books published on all phases of the plumbing question. From his reading he was acquainted with the Waring system of sewerage, particularly as applied to Memphis, Tenn., where the feature is the small size of the sewers used, says the Metal Worker. He was of the opinion that the 10-in. pipe could be reduced in size if it was done judiciously and a considerable saving in expense effected. He submitted his proposition to the hotel owners, and was given the order to try the experiment. He began by lowering the far end of the 10 in. sewer, and connected it by means of a tapering joint with an 8-in. pipe, which was carried some distance. Then this was reduced by means of a tapering joint to a 6-in. pipe, great care being taken to have the inside pipe at the joint where the reduction was made perfectly smooth, so that nothing could lodge to effect an accumulation which might eventually stop the pipe. After running some distance with a 6-in. pipe the piping was reduced to 4-in., this connection being made at the top of a sharp declivity, and the 4-in. pipe continued the remainder of the 600 feet, where it was connected with the sewer.

One Trouble With Stoppage.

This unusual sewer has now been in operation several years with only one complaint. A stoppage was noticed on account of the sewage backing up in the lowest fixtures of the building. Immediately the plumber's assitance was sought to discover the point where the stoppage was located and to remove it. He was of the opinion that this must be somewhere near the point of connection of the 6-in. pipe with the 4-in. pipe, probably at the bottom of the declivity where the 4-in. pipe began running with a slight fall. The sewer pipe was opened at this point and immediately spectators were entertained by the discharge of a fountain of filth much to the disgust of the workmen who made the opening. This experience gave evidence that the stoppage was further along the line. Without any means of discovering the exact point the trench was opened some distance beyond and fortunately immediately where the stoppage occurred. Here it was found that a small tin mustard box had passed through some plumbing fixture into the large sewer and passed through the various reduced mains and well along in the 4-in. line until by an unfortunate tilt it caught in the top of the sewer and became wedged fast and caused the accumulation which eventually stopped up the sewer. The obstruction was removed and the sewer line put in perfect repair, investigation showing that the

velocity of the discharge had left the bore of the 4 in. sewer free from any accumulation and quite clean, as sewers go.

Since this one experience the sewer has been doing service for a few years, and up to the present time there has been no second complaint of an obstruction, notwithstanding that some fixture in the hotel is frequently found stopped and the usual variety of tooth brushes, hand scrubs, wash cloths, towels and other matters never intended to pass into the sewer compressed in one mass.

KING RADIATOR CO. SECURE SITE.

Arrangements have practically been completed for the organization of the King Radiator Co., with a capitalization of a quarter of a million dollars, with Cluff Bros., Toronto, as the chief promoters; associated with them being the Warden King interests, of Montreal. Fred Somerville, of the Ontario Lead & Wire Company, Toronto, acted for these interests in securing their new site. The promoters have ordered their machinery, and have their patterns already prepared; the most experienced man they could obtain in one of the large plants in the United States, having been secured as superintendent of the proposed works.

A site for the factory has been secured on the Ashbridge's Bay marsh, in the eastern part of Toronto, a lease having been recommended by the Board of Control on the land, comprising 3 acres, with 11 additional acres of water lots. The site is at the foot of Cherry street, and westward to the line of the proposed new concrete breakwater. About $150,000 will be spent during the next six months in the erection of foundry buildings, etc., and from 100 to 150 men will be employed in the new works. The matter has to be ratified by the city council before it is finally settled.

In addition to a full line of radiators, the new company may also manufacture boilers at the Toronto works, and it has been definitely decided that soil pipe and range boilers will be produced.

The location of this industry at Toronto will have an important bearing upon the steamfitting and heating trades, and Cluff Bros., the promoters, must be congratulated upon the rapid development of their business in Ontario, which has made possible the present enlargement. They have already one of the finest warehouses and office buildings on the continent, and with the foundry, which will be in operation by August 1st next, they will be splendidly equipped to look after the interests of their customers.

BRITISH COLUMBIA PLUMBERS BUSY.

Plumbers and stove dealers have had their innings in B.C. for the past fortnight. Business in these lines is usually very slack in the first month of the year, and the time is as a rule taken up with stock-taking. But the cold wave which has blown down from the north-east and slopped over in the whole Pacific Coast region, even to sunny California, has made the balmy climate of B.C. a dream for the present. Fuel is at a premium, not because of its absolute scarcity but because it is difficult to deliver it quickly enough. The unwonted icy weather has made the streets and hillside one glare, and the effectiveness of delivery teams is greatly reduced.

At New Westminster, where the coal supply is all brought in by barges up the Fraser River, the coal shortage has become alarming as the river is so badly frozen over it is no longer possible for steamers to break their way through, let alone tow barges of coal. At Nanaimo and Ladysmith, the big coal towns on the island, orders have been to stop the export of coal until local demands have been supplied. But even this order has not sufficed to deliver the coal as promptly as desired. In Vancouver, coal dealers do not undertake to deliver at all. And as to taking orders, the rule is to limit the amount to one person at one time, to a quarter-ton lot. Even at that the only way to get it is to secure a dray and send it after the coal. Bad roads in from the country have made it difficult to team in wood, and as nearly every sawmill on Burrard Inlet is now closed down, the supply of mill wood is out, so that the shortage while not serious, is a very great inconvenience temporarily. But with the thermometer never lower than 2.3 below zero, which was the lowest reached and that dip for only one night, the weather is not sufficient to alarm people used to or prepared for it.

* * *

The most serious phase of the situation is the condition of the water pipes connecting to a large percentage of the houses in Vancouver. In many places not sufficient protection has been given where the service pipe enters the building and freezing has been common. In several localities, notably where street grades have been cut down, the service connections have been left near the surface or exposed and the inevitable result has followed. In many places the lucky householder who has kept his water service unfrozen is the object of envy and the source of water supply for the whole neighborhood.

The electric thawing device so commonly used in the east has never before been required or brought into requisition in Vancouver. The superintendent of waterworks has, however, arranged with the electric company for a current and for the necessary machine for generating the heat, so that frozen mains are being thawed out. The electric company also advertises that private parties may have their service pipes thawed out for the charge of $5.00 in cases where the connection is all iron, and $8 where the connection is partly lead pipe.

There have been several instances where water heaters connected with kitchen ranges or furnaces have blown up through negligence on the part of people in control, fires being set in stoves before connecting pipes were thawed. No fatalities have occurred, but in one case, that of the home of the Children's Aid Society, three little chaps were badly hurt, one of them having a leg broken through the explosion of the water jacket.

It is needless to say that the plumber is the busiest man in the city at the present moment, and the most sought after. Day and night the staff of every plumbing shop is busy, and new work is simply at a standstill till the insistent demand for repairs is attended to. There is one feature of the disagreeable experience which will lead to benefit, and that is, it has brought into prominence defects in the system of plumbing allowed in the city, where due care is not taken to protect plumbing from cold weather, and in future provision will be made in the regulations for meeting the unexpected.

BORDEN COMPANY EXPANDING.

B. T. Borden, of the Borden Company, Warren, Ohio, expects to establish a factory shortly in Canada for the manufacture of pipe threading machinery and dies. The Borden Company has broken ground at Warren for the erection of a new plant in that city, to be devoted exclusively to the manufacture of hand and power pipe threading machinery. The buildings will be constructed of brick and iron, and hence absolutely fireproof. They will be all one-storey high with the exception of the office building, which will be a two-storey structure. Work will be pushed along rapidly, as the company expects to have the plant ready for occupancy early in the spring. The new plant will be equipped with up-to-date machinery.

NEW INVENTIONS.

F. W. Kingsbury, Evansville, Ind., has secured two new U.S. patents, one being for an improvement in water-closet tanks, which has for its object to provide novel means for supporting the tank and for holding it by the plumbing connections in interlocked engagement with the supporting means. The construction dispenses with the expensive and objectionable back plate or board and brackets ordinarily employed. The other is for an improvement in water-closet seats, and has for its object the provision of a seat which will present no unusual appearance, will be strong and durable, and will have no sockets or other openings in its exposed faces to be filled by putty, litharge, cement, or the like.

J. E. H. Paddon, Montreal, has secured a Canadian patent on a new waste pipe trap.

METAL THIEVES AT MORRISON'S.

Detectives captured two thieves in the premises of the James Morrison Brass Manufacturing Co., Toronto, on Wednesday night. Several hundred pounds of copper and brass had been stolen and the police got wind that another haul was to be made.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, February 1, 1907

"Nothing to report this week" is the cry that greeted our representative on his weekly visit to Montreal's largest plumbing supply houses, and the gentlemen from whom we gather our information, in all cases, seemed to have an unusual desire to be back among their papers, which goes to prove that the banner year, which we predicted last week, is beginning to command their attention already. In fact it is only necessary for an "outsider" to step inside the door of any large house to see for himself, without asking any questions, that there's something doing.

The markets remain very firm, with no changes received—or expected as yet—over last week's quotations. Orders continue to pour in for spring shipment which goes to show that the plumber is a wise man and knows how to anticipate his wants, as well as anybody else.

RANGE BOILERS—The expected advance in the copper article is yet a thing of the future, but as copper is reported short from all quarters, it will assuredly come sooner or later. For the present, out prices remain: Iron clad, 30 gallon, $5; 40 gallon, $6.50 net list. Copper, 30 gallon, $33; 35 gallon, $38; 40 gallon, $43; 45 gallon, $50; 50 gallon, $58; 60 gallon, $68; 70 gallon, $80; 80 gallon, $95; 90 gallon, $115; 100 gallon, $150 net.

LEAD PIPE—Very firm. No change in prices. We still quote 5 per cent. discount f.o.b. Montreal, Toronto, St. John, NfB., Halifax; f.o.b. London, 15c. per hundred lbs extra; f.o.b. Hamilton, 10c per hundred lbs. extra.

IRON PIPE FITTINGS—A very brisk business is being done at the same figures. We still quote: Discounts on nipples, ¼ inch to 3 inch, 75 per cent., 3½ inch to 2 inch, 55 per cent.

IRON PIPE — We still quote: Standard pipe in lots of 100 feet, regular lengths, ¼-inch, $5.50; ⅜ inch, $5.50; ½ inch, $8.50; ¾ inch, 11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.50, discounts on black pipe, ¼ inch, 59 per cent.; ⅜ in. 59 per cent.; ½ in. 68; ¾ to 2, 70. Discounts on galvanized pipe: ¼ inch, 44 per cent.; ⅜ inch, 44 per cent.; ½ inch, 58 per cent.; ¾ to 2 inch, 60 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12; 3-4 inch, $15; 1 inch, $22; 1 1-4 inches, $30; 1 1-2 inches, $36; 2 inches, $50. The discounts on black pipe, ¼ inch, 74 per cent.; ⅜ inch, 69 per cent.; ½ inch to 2 inches, 68 per cent. Galvanized, ¼ inch, 59 per cent.; ⅜ inch, 69 per cent.; ½ to 2 inches 58 per cent.

SOIL PIPE AND FITTINGS—Our prices remain as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER—Prices remain the same: Bar solder, half-and-half, guaranteed 25c.; No. 2 wiping solder, 22c.

ENAMELWARE—A good business is being done at the same prices. We continue to quote: Canadian baths, see Jan. 3 1907 list. Lavatories, discounts, 1st quality, 30 per cent.; special, 30 and 10 per cent. Sinks 18 x 30 inch, flat rim, 1st quality, $2.60, special, $2.45.

AN EASY QUESTION.

Send in a reply to the question by March 1, and take a chance after the valuable prize offered.

If a customer asked the following question: "What are the advantages of hot water heating over steam heating in a private residence?" what arguments would you use in reply? Also outline what advantages steam heating possesses over water for this same class of work.

* * *

The above is the third of a series of questions Hardware and Metal is asking the trade in Canada to answer. Some interesting replies were received to the preceding questions and the simplicity of the above should encourage a large number of replies, the publication of which should be helpful to readers of this paper who engage in heating work.

For the best reply we offer a clothbound copy of J. J. Cosgrove's splendid text-book "Principles and Practice of Plumbing."

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Feb. 1, 1907.

The approach of Feb. 4th is looked upon with considerable interest by jobbers of heating goods, this being practically the big settling day of the year. There has been a tremendous volume of work done in all parts of Ontario during the past year, and with the exception of Toronto, good prices have been secured. In the Queen City, however, there has been considerable cutting, and while it is not expected that any firms will go under, some of the price-cutters will have some difficulty in meeting their payments.

The trade in both heating goods and plumbing supplies is rather slow, as the jobbers are not very anxious to book orders for future shipment owing to the expectation of higher prices. Plumbers are learning to look farther ahead than formerly, however, and from now on, will place orders considerably ahead of the time when they will require their shipments.

A few slight readjustments have been made in prices, but no big lines have changed. Some houses are advancing Jenkins air vents from $5.00 to $5.50, and Kerr Webber straightway valves are being advanced from 42½ to 40 per cent. Soldering irons are also quoted higher, and plumbers' oakum is firm at $4.75. American enamelware has been advanced, but the new lists are not yet available. It is certain, however, that the new figures will be $1.00 to $2.00 higher on each bath tub.

LEAD PIPE — The discount on lead pipe continues at 5 per cent. off the list price of 7c. per pound. Lead waste, 8c. per pound with 5 off. Caulking lead 5 3-4c. to 6c. per pound. Traps and bends, 40 per cent., discount.

SOIL PIPE AND FITTINGS — Recent advances are held to firmly with demand seasonable. Medium and extra heavy pipe and fittings, 60 per cent.; light pipe 50 per cent.; light fittings, 50 and 10 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE.—We are revising last week's figures on large sizes. One-inch black pipe is quoted at $4.95, and one-inch galvanized at $6.60. Full list in current market quotations.

IRON PIPE FITTINGS—Cast iron fittings show several advances. Cast iron elbows, tees, crosses, etc., 60 per cent.; cast iron plugs and bushings, 60 per cent.; flange unions, 60 per cent.; nipples, 60 and 10 per cent.; iron cocks, 55 and 5 per cent.; Canadian malleable, 30 per cent.; malleable unions, 55 and 5 per cent.; malleable bushings, 55 per cent.; cast iron ceiling plates, plain 65 per cent.; cast iron floor, 70 per cent.; hook plates, 60 per cent.; expansion plates, 65 per cent.; headers, 60 per cent, hangers, 65 per cent.; standard list.

RANGE BOILERS—An advance of 25 cents has been made on all sizes of galvanized iron and we now quote: Galvanized iron, 30 gallon, standard, $5; extra heavy, $7.75; 35 gallon, standard, $6; extra heavy, $8.75; 40 gallon, standard, $7; 40 gallon, extra heavy, $9.75, net list. Copper range boilers—New lists quote: 30 gallon, $33; 35 gallon, $38; 40 gallon, $43. Discounts 5 to 15 per cent.

RADIATORS—Prices are very stiff at: Hot water, 47½ per cent.; steam, 50 per cent.; wall radiators, 45 per cent.; specials, 45 per cent. Hot water boilers are unchanged.

SOLDER — Quotations remain firm as follows: Bar solder, half-and-half, guaranteed, 27c.; wiping, 23c.

ENAMELWARE—New lists on enameled baths issued by the Standard Ideal Company on Jan. 3, show a 10 per cent. advance. Lavatories, first quality, 20 and 5 to 20 and 10 off; special, 20 and 10 to 30 and 2½ per cent. discount. Kitchen sinks, plate 300, firsts 60 and 10 off; specials, 65 and 5 per cent. Urinals and range closets, 15 off. Fittings extra.

Keep Your Oil Room Clean

A dirty, slimy oil room is repulsive to customers, and is also a source of great danger, as a lighted cigar, match or spark is apt to cause a disastrous fire.

A Bowser Oil Storage Outfit will keep your oil room clean, because it prevents leaks and dripping. Overflow and over-measurement are impossible, and dirty, sticky funnels and measures are unnecessary with a Bowser. The oil is not exposed at any time, but all is pumped right into the customer's can.

If you want to have a clean store and oil room, write for catalog V. It tells how.

EVAPORATION REDUCED TO A MINIMUM

is one of the reasons why PATERSON'S WIRE EDGED READY ROOFING will last longer than any other kind made.

Mr. C. R. Decker, Chesterfield, Ont., used our 3 Ply Wire Edged Ready Roofing fourteen years ago, and he says it is apparently just as good as when first put on.

We have hundreds of other customers whose experience has been similar to Mr. Decker's.

DOLLARS FOR YOU

There's more real money for shrewd dealers in "Sovereign" Boilers than in any other make of boiler on the Canadian market to-day.

The "Sovereign" Boiler has reduced the heating problem to an exact and simple science.

The "Sovereign" has quickly swung into popular favor because its economic devices make for boiler perfection

Ask us to prove our claims to your satisfaction. A post card will bring the proofs

Your Business at Your Finger Tips

The merchant, if he is wise, no longer keeps his accounts upon tickets, in memorandum books, or in a loose way, but has a system by which at a glance, he can tell what he is doing

THE CRAIN MONTHLY ACCOUNT SYSTEM

has been in use by successful business men for years. It does the work in one-half the time, and in a way that is much more satisfactory to his customers and more pleasant to himself than plodding along in the old way. In this system, too, you require a binder, such as the Crain, with an unlimited capacity, which binds on one sheet as easily as it does 1,000, not one that you must have a certain number of sheets in before it will bind, and then only allows you to extend to a limited number of accounts.

Write us for particulars

Adze Eye Cutter Mattocks

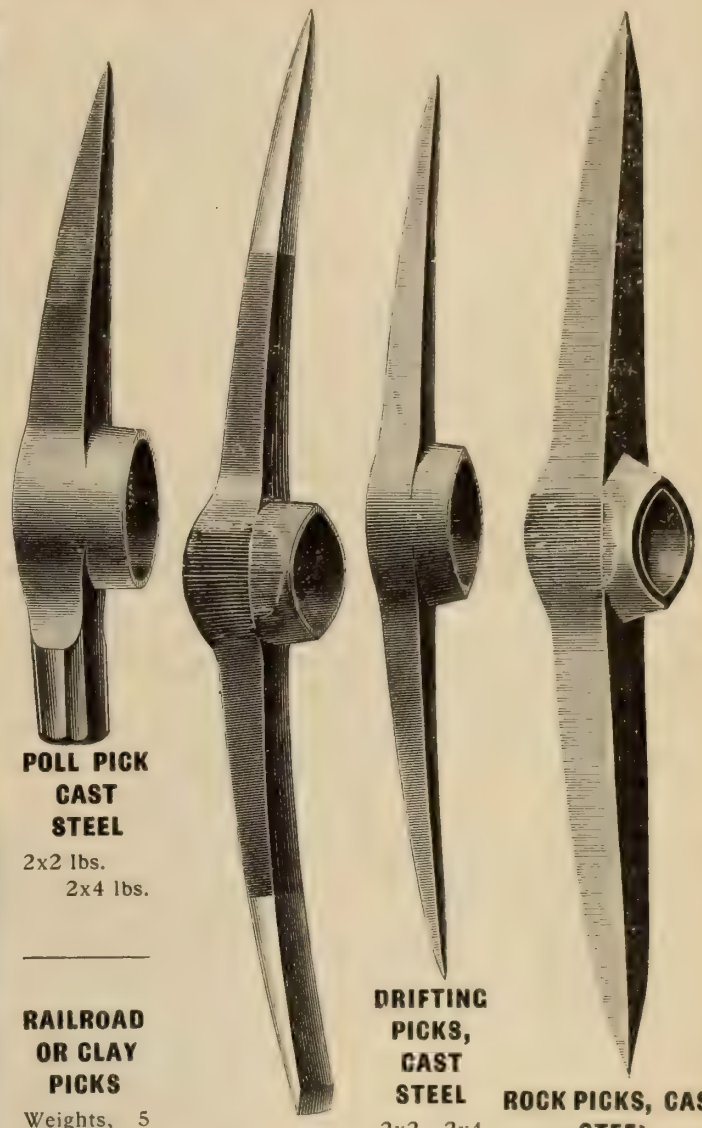
CAST STEEL

First quality, polished cutters, weight 5½ lbs.

It's a little early yet to talk this line, but the present is a good time to buy, as the Spring will soon be here and the prices we are making now, are a good deal lower than they will be then.

We are headquarters for everything in the pick line including Clay, Rock, Stone, Coal Drifting, Prospectors, Tamping, etc.

If you want to save something on your pick trade, write us now.



CROW BARS

We stock all weights and sizes, assorted, 10 to 35 lbs.

As a usual thing, this line is sold by the retailers with about the same profit as nails. If you know where to buy, you will find it would pay you a better profit.

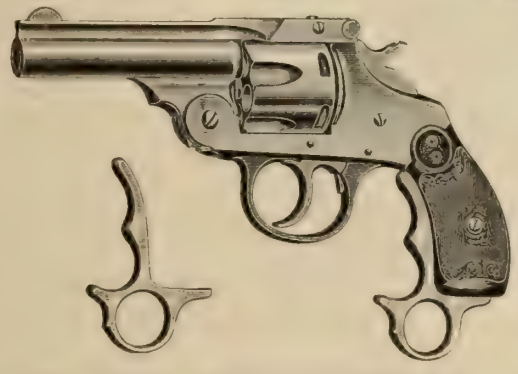
SAFE REVOLVERS



SAFETY HAMMER REVOLVERS
.22, .32, .38 Calibres

SAFETY HAMMERLESS REVOLVERS
.22, .32, .38 Calibres

Iver Johnson's grip can be furnished on these Revolvers at an extra charge.

No article should be selected with more care than a Revolver.

For defence it must be sure and reliable.

For safety it must be so constructed that it will not "Fire" at the wrong time.

Dealers handling Iver Johnson Revolvers know that each of these weapons is absolutely safe. Accidental discharge is impossible.

THIS IS WORTH CONSIDERING

With these safety features the cost is no greater than for Revolvers without them

Business Getters for Tinsmiths

Are there any defective chimneys in your locality?

Then it is your chance to get business.

THE

ZEPHYR Ventilator

saves the expense of building a high chimney.

It is so constructed as to guarantee a perfect draft and, therefore, easy combustion.

By using the ZEPHYR it is possible to burn soft coal with the best results.

The smoke is easily drawn off, enabling an even heat to be generated.

THE ZEPHYR IS STRONGLY PUT UP AND WILL RESIST ANY STORM

This is what others think of it:

Montreal, February 20th, 1901.

Messrs. HARRIS Co., Montreal. Providence Mother House.

Dear Sirs,

It is with pleasure that I can say that your "AEOLIAN" Ventilator is the best ventilator we have used on our establishment so far. We had eight (8) of the large sizes put up on our Mother House and on the Hospice Gamelin, and they gave us entire satisfaction.

Yours respectfully, SISTER MADELEINE, Dep.

We manufacture and guarantee

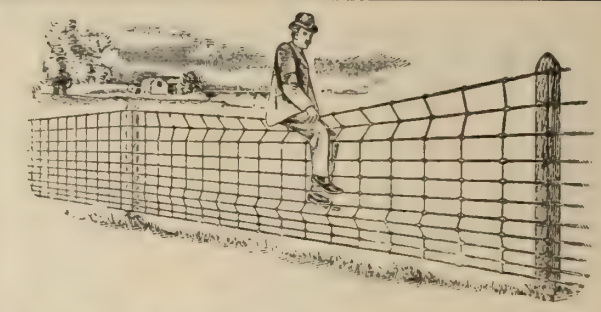
Peerless Woven Wire Fence



Here is a fence that will sell. Once up no need for repairs. It lasts for years—just what you are looking for. It's horse-high, pig-tight and bull-strong. No stock can get over, under or through it. The most unruly animal can't butt it down and there are no barbs to tear and injure stock. It's

WIND AND WEATHER PROOF

The Peerless lock holds it perfectly rigid and the wires can't slip up, down, nor sidewise. Cold weather won't snap it and hot weather won't make it sag. It's the greatest thing out for farmers, stockmen and all other fence users which makes it a red hot proposition for dealers. It comes in rolls all ready to put up. It's easy to handle. Write for prices.

The Banwell Hoxie Wire Fence Company, Ltd.

Four Reasons why INVICTUS FIBRE is the BEST FIBRE PAPER on the Market

1. Invictus Fibre is made from personally selected pulp wood cut on our own limits.
2. This special pulp wood is again rigidly culled on arrival at our mills
3. The pulp from which Invictus Fibre is made is manufactured in our own pulp mill and transferred at once to the paper mill, avoiding all drawbacks of transportation.
4. Invictus Fibre will increase in strength and not grow hard and brittle as does fibre made from sulphite pulp. This is a quality of the peculiar and selected pulp from which Invictus Fibre is made.

A trial order will convince you that we are correct. See that each package bears the words "Invictus Fibre." Every ream contains 480 sheets

GOTHIC CEILING PLATE NO. 5002

our

Classified Ceilings

never fail to please. They give tone to any interior. No retailer should be satisfied with a plaster ceiling in his store, when at a moderate cost, he can have the most handsome and durable finish obtainable. Metal ceilings never crack and drop off like plaster, and can always be refreshed with soap and water.

We have dozens of letters like the following:

STRATHROY JAN. 19, 1907

In 1900, I purchased a ceiling for our store, which has given perfect satisfaction. It has been admired by a great many people—to-day it is as good as ever. We have only painted it once, that was when it was put up. I may say that several of my friends have been induced to use your ceilings since our was completed. In short, your goods have pleased perfectly.

Yours truly,
(Signed) H. C. BRITTAIN.

P.M.G. May Withdraw C.O.D. Clause

Postmaster General Understood to be Prepared to Withdraw Proposal Unpopular in Parliament—Success Seems Assured—Keep Up the Fight.

Letters written by members of Parliament to retail dealers indicate that the campaign of petitions and letters of protest conducted by the Retail Hardware Associations and the trade newspapers during the past six or eight weeks has borne fruit and Postmaster-General Lemeiux, in view of the unpopularity of the proposed changes in the postal regulations amongst the members of Parliament and the thousands of letters which have been sent to the P.M.G.'s office, has practically decided to withdraw the c.o.d. feature which is so objectionable to the retailers throughout Canada. This news will be gratifying to every reader of Hardware and Metal and to each member of the Ontario and Western Canada Retail Hardware Associations, both of which organizations took prompt action towards protecting the interests of the trade as a whole. But the fight is not yet won. Things appear to be coming our way, but to let up in the campaign now would be suicidal.

P. M. G. Has Powers of Czar.

In Hardware and Metal of Jan. 19 we stated that a Hamilton retailer had been advised by his local M.P. that "it is not likely that a bill will be introduced in Parliament to amend the parcels post system, as the Postmaster-General has the power to adopt the proposed c.o.d. amendment without introducing a bill in the House."

At that time we referred to the exclusion of certain newspapers from the Canadian mails, in one case the Postmaster-General having been withdraw a ruling after enforcing it for a brief period owing to the thousands of letters of protest written him. We urged that every retailer write the Postmaster-General, as well as the members of Parliament. If the publishers of a Socialist weekly could force the Postal Department to take back water after action had been taken, surely Canadian retail merchants should be able to head off the striking of a blow at their heads.

To make sure, however, that the Postmaster-General could so materially damage the business interests of thousands of taxpaying retailers by introducing new postal regulations without consulting Parliament Postmaster-General Lemieux was written to on January 17 as follows :

"We have been informed that you have the power to adopt the parcels post system, which you referred to in the House a short time ago, without introducing a bill. Will you please inform us if this is so." Common courtesy would have warranted the sending of a reply to this letter, but to date it is unanswered.

On January 31, Dr. Sproule, M.P., representing East Grey, inquired from the floor of the House if the Government intended introducing a bill this session for carrying post parcels c.o.d "No legislation is necessary," was Postmaster-General Lemieux's answer, "it is a departmental regulation and is now under consideration."

Inactivity Means Defeat.

The Postmaster-General, therefore, can not only exercise the powers of a press censor, can say what Canadians should or should not read, but he can cause the ruination of innumerable small business men by a simple revision of the postal regulations. These are wide powers, such as are only exercised by Czars and autocrats. They are not in keeping with our theories of constitutional government, but it must be remembered that the people still have the ballot and were a Liberal or Conservative Government to go too far in the way of initiating dangerous and unpopular postal regulations the people have the power to mete out punishment to the guilty ones, and there are enough retail merchants in any constituency to change its political complexion.

With a clear knowledge of the powers of the Postmaster-General, and a knowing that he is still "considering" the revision of the parcels post regulations, it behooves every retailer to "get busy" and "keep busy."

It isn't enough to have already written one letter. That letter did good. Follow it up by another letter to the Postmaster-General, sending a copy to the local member of Parliament and another copy to us. Pass the letter around amongst the retailers in your town and have them sign it before forwarding to Ottawa. And don't fail to show the letter or petition to the editor of your local paper, so that he can write an editorial and send copies of the paper to the P.M.G. and M.P.

Keep up the fight until we advise you that success has been achieved. It will be far better to [illegible] law-makers at Ottawa with letters than to send too few.

If the politicians see that Canadian retailers are alive to their interests and in fighting mood against the capitulation of the Postal Department to the mail order millionaires it can be taken for granted that they will think twice before letting the hammer fall.

A Conspiracy of Silence.

While the retailers have been active in sending mail bags full of letters of protest to Ottawa, there has been no indication, outside of the articles in the MacLean trade newspapers and the circular letters of the Retail Hardware Associations that the retail trade is in danger of being delivered a solar plexis blow by the departmental store interests.

Were it not for the Postmaster-General's reply to Dr. Sproule, M.P., in Parliament on January 31, many dealers might rightly think that there was "much ado about nothing."

Surprise has been expressed that the daily papers, even those of the highest standing, have made no attempt to inform the public as to what the effect of the proposed legislation would be Their silence on a question of such national importance is significant, and is to be condemned with all possible severity. Throughout the country we find their attitude interpreted by retail merchants as good evidence that they are under the thumb of the department store interests.

What other reason can they advance to explain their inaction ? Some might defend themselves by saying that the proposal is still in very indefinite form, and that it would be unwise to turn public opinion one way or the other until an idea can be given of just what it will embrace. That would be a poor excuse. They know the intention is that the post office shall carry much larger parcels than at present, at a cheaper rate than the express companies now give virtually the establishment of a postal express service; that provision shall be made for the sending of parcels from any point to any other point c.o.d., collection to be made by the postmaster at destination; that with this system in operation the Government would, as a matter of course, absorb the express companies; that the post-office would be expected to carry parcels at about cost; that the big retail catalogue houses would be enabled to enter more directly into competition with every local merchant in Canada, with the natural result that great numbers of the latter would be forced into liquidation or a position of insignificance, as mere vendors of staple lines, that the wholesale trade would suffer in accordance with the effect upon retailers; and that, viewed from every standpoint if they take the trouble to examine the situation the enactment of such legislation would be one of the worst things that could happen to the mercantile life of Canada at the present time.

Effect of Proposed Changes.

The adoption of the proposed change in the postal system would mean the concentration of the great volume of trade in the large cities, to the impoverishment of the smaller cities, towns and villages. It would act as a powerful deterrent to the general progress of the country, for in the building up of a nation the small merchant plays an important part. He has constituted one of the most potent factors in the development of great areas in the West, through the extension of long credit to settlers, thereby permitting them to devote their cash capital to the improvement of their farms. He sometimes got his money after the first crop; he sometimes had to wait until the second. In this way he tided thousands of families over the crucial period of their pioneer existence.

The catalogue houses cared nothing about this trade, for the reason that payments were not spot cash. The local merchant catered to it without opposition from outside, and now that

circumstances for the settler have improved, and he has more money at his disposal, the big city stores value his business. With the assistance of parcel post and special express rates they are able to get a good deal of it at the present time. Now it is proposed to equip them with advantaages that would mean the attraction to their hands of all, or nearly all, the cash trade, while the local merchant would be left to take care of the credit business and shoulder bad debts besides. This would preclude the possibility of the latter being able to buy his goods for cash and sell as cheaply as he otherwise would. In calculating his percentage of profits he would be obliged to make provision for terms exacted by manufacturers and wholesalers on long dating and also for bad debts. As the country became more prosperous and people were able to buy more and more for cash, and recognized the advantage of so doing—the tendency in this direction is becoming stronger every day—his trade would gradually be depleted and that of the catalogue houses strengthened.

Cash to City, Credit at Home.

Throughout the older-settled portions of the Dominion it would be difficult to find a community from which mail orders are not sent. Often it is found in small towns, villages or cross-road settlements, where a good proportion of the buying public is composed of farmers, that many people send all their ready cash, to the catalogue houses and look to the local merchants to extend them good long credit at any time, and go even farther at seasons when crops are backward. Then, in the general stores, farmers find a market for their produce, with keen competition to assure them of good prices. Kill off the general stores and you kill off this market, as well as deprive the farmer of the credit accommodation that he often finds necessary.

It does not require any extraordinary perception to see what effect the decrease of activity in local markets would have on the towns, villages and surrounding communities with respect to real estate values, etc. The effect would extend from one of Canada to the other.

We see no reason for the silence of the metropolitan press other than that it is influenced by the advertising patronage of the catalogue houses. The conclusion that this is so is forced upon us, though we would like to believe differently. Not one of them gave any prominence to the matter in its news columns, and only one that we have seen took it up editorially, then making no mention whatever of the injury that would be done to local merchants is such a change were adopted. Another, in an obscure paragraph of seven or eight lines, did go so far as to say that great benefit would accrue to mail order houses. Even the question of Dr. Sproule and the answer of the Postmaster-General, quoted in the opening paragraphs of this article, were ignored by all Toronto papers but one in their parliamentary reports. Their representatives in the press gallery must have been acting under instructions or else a strict censorship in this regard is exercised over their copy at the offices of publication.

Jobbers Should Assist Retailers.

Every wholesaler should use his influence with both members of Parliament and the Postmaster-General to aid in defeating any further extensions of the parcels post regulations which are intended to switch business from the country dealer to the city mail order house.

As already pointed out, such legislation will be certain to hurt the jobbers in the long run, even if jobbers sell to departmentals, as the tendency is for the mail order houses to secure control of the output of factories owned or controled by them. Dry goods jobbers have taken up the agitation actively and wholesalers in other lines might well follow their example.

MORE LETTERS FROM DEALERS.

Following are a few additional extracts from the thousands of letters being forwarded to the Postmaster-General and members of Parliament by retail dealers in all parts of Canada in opposition to the proposed extension of the parcels post system:

* * *

"It would be a great injustice to the many local merchants doing business to-day and paying business taxes to allow the mail order houses to step in and get the cream of country trade through the medium of this c.o.d. privilege. . . . I think mail order houses should be taxed on the amount of business they get in the country."—Ontario.

* * *

"In 99 cases out of 100 the consumer can purchase just as cheaply at home as from the department stores, if he takes into consideration the postage or express. I trust you will do all you can to oppose this measure. If put through its effects would be far reaching and exceedingly injurious."—Ontario.

"If passed, this bill would place a great many local merchants in such a position that the mail order houses would practically ruin their businesses."—Nova Scotia.

* * *

"This bill has, no doubt, been initiated by the retail catalogue houses. If passed they would inundate the towns and villages of Canada with parcels, to the injury of local merchants, who pay the local taxes and keep the wheels of commerce moving."—Nova Scotia.

* * *

"For some years past the mail order houses have been industriously circulating their catalogues throughout the Island, and thousands of dollars have been sent to them each year for merchandise that might have been purchased just as cheaply at home. This is a serious loss to the merchants, and the province generally, and if the proposed bill is allowed to pass, mail order business will be greatly increased."—Prince Edward Island.

"You are aware that in all towns the business portion is the one which pays the bulk of the taxes, and that for the privilege of doing business. Any legislation that would allow outsiders easy access to towns, without contributing to the maintenance of said towns, would be unjust. We ask no favors, and do not want the other party to get any either."—Ontario.

* * *

"Being a merchant yourself you will understand the matter fully. There is no doubt that the large mail order houses are at the bottom of the proposal."—Prince Edward Island.

* * *

"I would ask you to oppose this bill and try to secure the co-operation of other members as well."—New Brunswick.

* * *

"We have been informed that a bill will be introduced into Parliament at the present session to establish a cheap parcel post system in Canada, whereby the post office shall collect on parcels. A moment's reflection will, we think, show you the injustice of the proposal. It would mean placing at the disposal of the few mail order houses a great public utility, to the support of which these concerns contribute not a dollar in comparison to the hundreds of dollars contributed by those whom such a move would injure. No doubt this ridiculously unjust and unbusinesslike proposal is instigated by the mail order houses. They are not satisfied that the postal service carries their trainloads of catalogues into every corner of the Dominion, thus placing them in a position to unfairly compete with the local merchant, who has to bear his share of local expenses, while the catalogue house goes free; they now want the post office to carry their wares cheaper, and do their collecting to boot—in short, to transact business for them at the expense of the country. We are confident that, should this bill appear, you will lend a hand in passing it to the place where it belongs—the waste basket."—Quebec.

RETAILER CHARGED WITH CONSPIRACY.

Montgomery, Ward & Co., Chicago, have begun action in the circuit court at Sioux Falls, S.D., to secure an injunction against the South Dakota Retail Merchants' Association on the ground that the association has conspired to prevent jobbers and manufacturers from selling goods to so-called mail order houses. This shows that the mail order houses are hard hit. There is little question but what the merchants will win, as there has been no conspiracy. The jobbers and manufacturers are simply protecting their own interests in their efforts to supply retail merchants in preference to mail order houses. There is no conspiracy, and never has been. Montgomery, Ward & Co. will be unable to prove their case, and simply hope to stem the tide that is setting in against them.

Do not make the same mistake twice. The show window is the merchant's great ad.

Window and Interior Display

Photos of Window Displays and Sketches or Photos of Store Interiors or Display Fixtures Solicited.

PRIZES AWARDED FOR DISPLAYS.

The results of our recent competition of photos of window displays of Christmas goods was not as satisfactory as it should have been. About a dozen clerks and dealers sent photos, but there seemed to be a desire to do it on a cheap basis. One of the finest displays came in on a very small amateur photo, so small and unsatisfactory that it would be a waste of money to have an engraving made from it. Had it been taken properly it would at least have won second prize.

A Lesson for Clerks.

This should be a lesson to window dressers. When a display is arranged that one feels proud of, a photo should be taken of it—not a poor photo, but a good one which will do the display justice. Even if it costs a dollar or so the expenditure will be repaid in many ways. A clerk who earns a reputation as a window dresser can command a higher salary than one who is only good behind the counter. His services will be in demand, and it is his own fault if he does not get the publicity necessary to widen his reputation. Excessive modesty, like parsimonious photo taking, does not pay.

It is equally necessary for the dealer to make a reputation for his store window displays. He should encourage his clerks to develop their talents allowing them to go to a little expense for papers for backgrounds, window cards, etc. And it will pay him to give the local photographer from 50 cents to $1 for a photo of a good display. If the display has merit and a photo is supplied us, we will have photo engravings made for reproduction in Hardware and Metal, and where a merchant desires to have the cut used in his local paper we will loan the engraving for this purpose. The local publisher will be only too glad to give space free to any advertiser for such a cut and accompanying article.

Winnipeg Clerk Wins First Prize.

W. J. Illsey, manager of the retail cutlery department for the J. H. Ashdown Hardware Company, Winnipeg, who was awarded the first prize of $6 cash, forwarded a very clear and well taken photo of a double window containing cutlery, carving sets, case goods of flat plated ware, hollow silver ware, cut glass and lighting fixtures, all timely lines for holiday sale. The background was of white silk, the upper portion being taken up with rows of electric bulbs artistically covered with holly. The photo will be reproduced in November next when the thoughts of dealers will be centred upon preparations for the next holiday season. These window displays were backed up with well prepared advertisements in the daily papers, copies of which were forwarded along with an interesting letter containing a description of the arrangement of the display and the results secured.

Second Honors to Halifax Traveler.

S. S. Wetmore, Newfoundland traveler for A. M. Bell & Co., Halifax, whose novel window displays have made him known to the hardware trade in all parts of Canada, was awarded the second cash prize of $4. His display was specially designed for publicity, the idea being to attract attention to the store, reliance being made upon other window displays of purely hardware goods to induce possible customers to enter the store and buy. From this standpoint the display did not really come under the conditions of our contest, but the display and the photo were so far in advance of the others that Mr. Wetmore's contribution had to be given second place.

The Other Prize Winners.

For window displays A. H. Gingrich, Woodstock, and R. W. Craigie, Goderich, the later a clerk with C. C. Lee, prizes valued at $2 were awarded, while a fountain pen was also given to L. H. Fleischauer, clerk in Peter Hymmen's big store at Berlin, for the best advertisements advertising lines shown in the Christmas windows.

Experience seems to show that photos of window displays can best be taken at night with the window lights supplying the light. In some cases flashlights can be used, but the advice of the photographer would have to be taken on this point. In the case of the photo supplied by Mr. Gingrich a flashlight was used and, there being no glass dividing the window from the rest of the store, the photo is peculiar in showing both the window display and the store interior.

FOR THE FROSTED SHOW WINDOW.

In northern portions of Russia, where zero weather is sufficiently common, experience has taught the owners of show windows that the only effective protection is a 3-inch air-space between two panes of glass. The outer sash is rendered as nearly tight as possible by calking the chinks and pasting strips of paper over the crevices. The glass is then carefully cleaned and dried on a clear, mild day, and a second sash, fitted with the same care to prevent all circulation of air, is inserted about three inches within the first. The double panes are said to obstruct the view very little. The physical cause of the deposit of moisture and ice upon windows is the difference in temperature between the surface of the glass and the air bearing a relatively high proportion of moisture, which comes in contact with it.

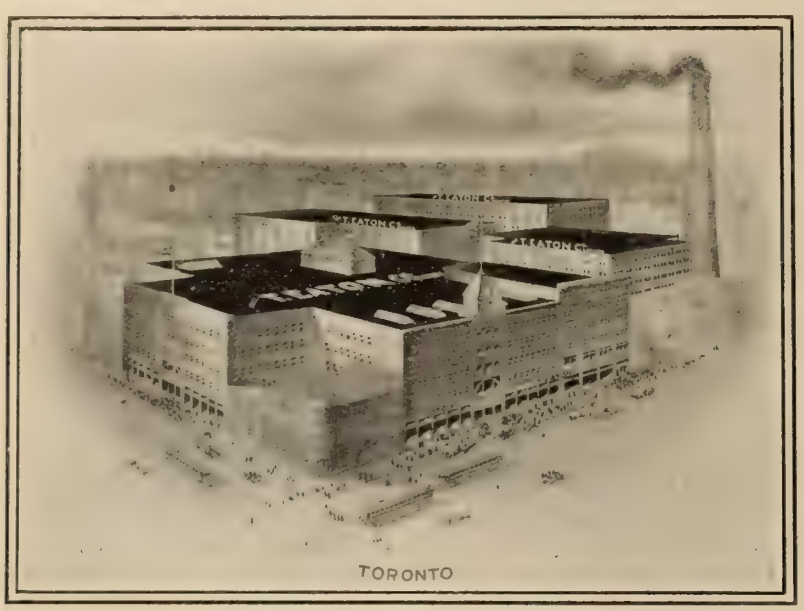
TELL THE STORY PLAINLY.

Too many trimmers, especially those who are somewhat new at the work, begin on a window with the feeling that they must do something great and wonderful. They try to, and the results are not always artistic or effective.

It is the same way with persons who are not used to writing for publication. Asked to write "something for the paper," they feel that it is up to them to produce some sort of ornate literary masterpiece which will be a gem of its kind and will attract widespread attention. They do not realize that all that is necessary is for them to tell in simple language and straightforward fashion what they know or think about the subject at hand, and that an article of this sort, absolutely devoid of any frills or furbelows, will be twice as readable and twice as strong as anything else.

Instead of starting out with the idea that he must produce a wonderful and remarkable trim and getting somewhat "rattled" in his valiant endeavor to do so, the trimmer should bear in mind that it is necessary for him only to display the goods at his disposal in strong, simple fashion, so that people will be attracted into the store to buy.

Of course, this does not mean that the trimmer should make no effort to produce an artistic and beautiful window, but simplicity is the thing to strive for and the fewer frills and furbelows there are in the window the more effective it will be.



It has been said that after looking at a man who is really well dressed one will not be able to tell what he had on; in other words, that the man who is really well dressed wears nothing that obtrudes itself upon the attention and that the things he has on are so perfectly in harmony that the whole effect, while restful to the eye, is not particularly noticeable.

It is so with the window. It should have a strong, direct effect upon the beholder, but he should not be made aware that there has been any effort made to entrap his attention or to force him to look. The highest art is the concealment of art.

TIMOTHY EATON, THE MAN

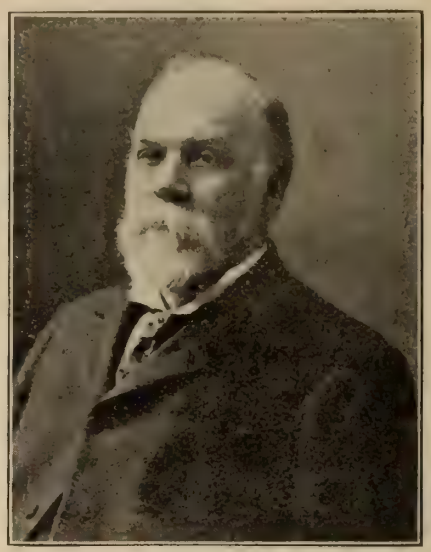
Sketch of the Great Merchant Who Pas sed Away Last Week—His Own Fortune-maker—An Irishman of Scotch Descent.

By the death of Timothy Eaton on Thursday of last week Canada loses its greatest merchant. He began as a retailer and remained a retailer and his monument is the great business he built up. Mr. Eaton came to Canada in 1857 with £100, a common school education and the memory of a good mother. He has left a business that is among the two or three largest retail stores in the world. In proportion to the country and population, it is the largest in the world by long odds. Marshall Field's, Chicago, is larger, but not nearly as much larger as the population of Chicago is larger than Toronto's or that of the United States larger than Canada's. A member of a government survey called at a settler's shanty in the back woods of northern Ontario. He wanted to see the settler, but the wife only was ed at him." His mind was not on money making, but his ambition was wrapped up in his business. Every faculty of his alert and powerful intellect, every ounce of his abundant physical strength was directed along the lines of building up the Eaton store. His manner was abrupt to bluntness. Personal considerations weighed little or nothing with him when the welfare of the store was at the other end of the scale. But his vision was far-seeing; his politics were broad, liberal, and founded in justice and honesty. "The greatest good to the greatest number" was a motto of his. He was a man of strong individuality and great self-reliance. His mind worked with such rapidity that his decisions, even in important matters, were often instantaneous.

The Eaton Toronto Store and Factories.

at home. When he told her he was from Toronto she became interested at once; asked him in and began to question him about Eaton's. She told him they had been getting their supplies from Eaton's for several years and were greatly pleased with the service but she had never been in the store. She wanted to know everything he knew about the store and its founder.

Eaton the Man.



The Eaton store is known to most Canadians, but the man behind it has been little in the limelight of publicity. Few men knew his politics. In commerce or finance outside his business he was practically unheard of. He had a passion for merchandising, not for money making. He said to his son not very long ago: "If anyone had told me years ago that I would control as much as a million dollars. I would have laugh-

At one time there was a vacancy at the head of an important department that had to do with the whole store. Two good men in the department wanted the place and a good deal of feeling developed among the other managers. It came to the ears of Mr. Eaton. He asked for an explanation. "Let them both go," was his immediate decision. One of them is now one of the highest-salaried men of his class in America, and the other is manager of a big store in another city.

A Just Man.

An incident of many years ago will show how, while his sense of justice could be appealed to, his first consideration was the business.

When Mr. Eaton was located on Yonge St., south of Queen, he employed for the print counter a young Scotchman just arrived from the Old Country. A couple of weeks after a methodist clergyman and his wife were in the store. She bought some print and moved on with Mr. Eaton to another counter. Her husband had gone to the methodist bookroom just around the corner. When she went to pay Mr. Eaton for something she had bought

THE LATE TIMOTHY EATON.

from him she missed her purse, and saying she left it at the print counter went to get it. The Scotch clerk told her there had been no one at the counter and if the purse was left there it would be here yet. He began to search but could not find it and she accused him of having it. Mr. Eaton came and the clerk said to him what he had said to the customer. Mr. Eaton said he would have him searched and called the foreman. The Scotch clerk put his back against the shelves and said to his employer, "send for a policeman, and I'll stand here, but no man in this house

JOHN C. EATON,
The Present Head of the Business.

will put a hand on me." No one wanted to tackle the angry Scot, and while they waited for the officer the minster came back. His wife explained that she had lost her purse and he replied, "oh, no,

my dear, you haven't. Don't you remember you gave it to me?"

Demanded Apology.

The customers were moving away when the clerk interrupted with "this woman has accused me of a crime, and if she doesn't apologize it'll be my turn to send for an officer." The minister came back to apologize, but that wouldn't do. He insisted upon his accuser doing so and she did. When they had gone Mr. Eaton called him to the office, paid him off and told him to go. When he had his money the clerk said:

Mr. Eaton, if you had a son 3,000 miles from home and he was accused falsely of theft and did not stand up for his honor, what would you think of him?"

"But you've lost me that customer," growled Mr. Eaton.

"Better lose a thousand customers than that a son should sully his honor," burst forth the Scotchman.

"Em. Go back to your department," was all Mr. Eaton said, and that ended the matter.

A Blunt Man.

Mr. Eaton's bluntness was positive, assertive. His intensely practical mind, keyed by nature to rapid action, could not brook parleying. He made up his mind quickly and acted promptly. Like other people he made mistakes, but he was never ashamed to admit one as soon as he saw a better way. With him nothing was finished till he thought it right. He had no patience with makeshifts. He might order up a stairway in the store to-day and to-morrow morning if he saw a better arrangement he would order it down again with just as little hesitation. His ambition never halted at the biggest or best store. His aim was ever a better store. Restless progressiveness was a dominant characteristic.

Judging Men.

One not inconsiderable factor in his success was his faculty for estimating men. He was going through the store once and came upon a big Irishman, lately employed as floorwalker. "How long have you been here?" he asked abruptly. "It's none of your business" responded the Irishman cheerfully, not knowing his employer in person. "Well, what are you doing?" persisted Mr. Eaton. "I'm minding my own business, and that's more than you're doing," returned the Irishman, testily. Mr. Eaton's comment afterwards was that he wished he had several hundred more like that in the store.

Another time a manager of a department affecting the whole business, made arrangements for a week off. In the course of the week something went wrong and the operations of the department were practically suspended for a couple of days by Mr. Eaton's order. Shortly after the manager returned Mr. Eaton was in the private lunchroom when this man entered. He called him over and in his characteristically brusque style accosted him:

"So you're to blame for all this trouble we've had."

Without hesitation the manager shouldered the blame.

"Yes sir, I guess that's right."

Just as gruffly Mr. Eaton said it shouldn't have happened, and the conversation was ended, but next pay day the manager found an advance of $10 a week in his salary. Mr. Eaton had wanted to see if the man was big enough for his place and would shoulder his responsibility as manager, present or absent.

Treatment of Employes.

Talking about Mr. Eaton with men in the employ of the store to-day or with men who left it many years ago, they all render his conversation in a tone as brusque and abrupt as one can imagine a man to speak. Yet in the treatment of his employes he was large hearted. There has never been a strike on account of wages or conditions. A manager told the writer he knew he was getting more money than he could get anywhere else. If an employe is away a day, two days at most, someone is sent to see if he or she is ill. Should that be the case, it is seen that he or she has proper medical attendance, or if necessary is sent to a hospital, and the hospital bill is paid. Before the business assumed such tremendous proportions Mr. Eaton would go himself in cases of sickness. He took pride in his staff. Speaking to his pastor once after a store picnic he exclaimed, "It would do your heart good to see them."

Early Closing.

More than any other man, perhaps more than any score, Mr. Eaton has helped on the movement for a shorter workday in Canada. One Christmas Eve, years ago, there was such a crush in the store that the crowds were almost unmanageable. Mr. Eaton declared he would never keep his store open at night again. He inaugurated the 5 o'clock closing, first during the summer and extended it to the whole year. He next closed the store at one o'clock on Saturdays during the hot months and his intention was to extend that month by month. He often said the time would come, not in his lifetime but his sons', that stores would close all of Saturday all the year. His theory was that if people had one clear day in which to enjoy themselves, they would attend more regularly to their religious duties on Sunday and would be the better for it, both as employes and as citizens.

In religion Mr. Eaton was a Methodist, and a stout adherent of the old-fashioned orthodoxy, but he was not an aggressively devout man. He took his religion as a matter of course and his business as a matter of fact.

His Ancestors.

Mr. Eaton's forbears were farmers near Belfast, Ireland, and he was descended from a Scotch settlement of 300 years ago when Cromwell was making Ireland over. His father died before he was born, but his mother was a brave, ambitious woman, and despite their poverty, secured to her children the national school education available at the little village of Clogher. After the potato famine of 1847 the oldest boy came to Canada and Timothy was apprenticed to a draper at Portglenone, a small market town. After five years he took his wages, £100, and followed his elder brother. He started in business in Kirkton, Huron County, in 1857, where supplies had to be brought in by wagon. Later he removed to St. Mary's where he was in partnership with his brother. The field was not large enough for him and he had become possessed of a desire to do business on a cash basis. He said to his brother, "You take the money and I'll take the business, or I'll take the money and you take the business."

The latter solution was adopted and he came to Toronto in 1869 and opened a small store on Yonge St., south of King. Then he removed to a store between Queen and Richmond and some time later to 190 Yonge St.

Principles of Business.

Early in his independent business career Mr. Eaton laid down three principles, no credit, no misrepresentations, one price to all. On these by the force of his ability, his courage and his dogged perseverance, he built his great success. All three qualities were often needed in the early days to pull him through. At one time a big dry goods house in Toronto guaranteed all his bills and he paid five per cent. for it. A Scotch house once had an account of $29,000 against him, and becoming nervous sent a man to collect it. Mr. Eaton told him as brusquely as usual that he would pay it whenever he got ready. But the agent entered suit and an agreement was made for the payment at the rate of $1,500 a month. The payments were all met promptly. But for many years the Eaton store has bought for cash and its buyers circumnavigate the globe.

No rule of business could be adhered to more strictly than Mr. Eaton's to sell for cash. It is stated that Mrs. Eaton has asked a clerk to send an article home for her without the cash and been refused. The wealthiest customers pay the cash or get their goods c.o.d.

One is inclined to seek the reason for Mr. Eaton's great success. It is to be found only in the man himself. He is one of the few very rich men whose wealth is quite independent of any government aid or public privilege. He made his money and built his success as a trader and the business he built up amply entitles him to be named a merchant prince.

LAWN MOWER GRINDER.

In placing the 1907 pattern of the Ideal lawn mower grinder upon the market, Root Bros., Plymouth, O., assert that they have now made the machine as nearly perfect as it can be built. They state that owing to the great interest taken in automobiles a large number of repair shops have sprung up, and that not one of these ought to be deemed complete if it does not possess an Ideal grinder, and the hardware dealer who does such work as sharpening lawn mowers, is another man who will be interested, as will many blacksmiths. Think of doing in 15 minutes—and with very little exertion even if the grinder is run by hand instead of power—what formerly required an hour of downright hard work with a file, and even then one was not always sure that the bevel on each blade was accurate, and so much depends on this bevel! Skates, tools, etc., can be sharpened as well as lawnmowers on the grinder. Any desired information as to price and terms can be secured from the manufacturers by mentioning this paper and writing on the firm's business paper.

STEEL COMPANIES MAKING MONEY.

It has been customary to hear hard luck stories from the Canadian steel companies, owing probably to the repeated reports regarding the proposed establishment in Canada of a branch plant of the United States Steel Corporation. Through these stories the public has been educated to the belief that there is no money in the steel business in Canada, and that the promoters are philanthropists in building up Canadian industry and in providing work for our working people.

It is refreshing, therefore, to read that at least one concern, the Hamilton Steel and Iron Company, is enjoying a large measure of prosperity. According to the Toronto Daily News the company's stock has jumped from 110 to 135 within the last few days as a result of an effort being made by a few of the largest shareholders to buy in all of the stock. The reason for this action is said to be that $500,000 worth of bonus stock is to be distributed pro rata among the present shareholders. The plant is to be doubled, but the money will be taken out of the reserve fund."

A Montreal paper also says that the common stock of the Nova Scotia Steel Company will be put on a 6 per cent. basis for 1907, and that a dividend of 6 per cent. for the six months ended March 31, will be paid in April. The dividend will take only $75,000 out of the net earnings for 1906, which are estimated at over $900,000, and which, after the payment of [illegible] interest, would leave about $150,000, so that after the payment of the dividend there would be left over $100,000 for extensions and improvements. It is expected from the unfilled orders at hand that the company's net earning for 1907 will exceed those of 1906.

With conditions such as are indicated in these extracts existing it looks as though the United States Steel Corporation would be making no mistake in entering the Canadian field, with furnaces at some lake port in Ontario. It is interesting to know that the corporation is well thought of in the States, where it is best known, the American Metal Market Report of Feb. 4, having the following to say about them:

"The general feeling in the trade here and also in leading financial circles is that the commission's report will give the steel corporation a clean bill of health, although their reports on some other corporations have been of a different character. No matter the evolution and changes the Steel Corporation caused in the iron and steel trade, in many cases so distressing to hundreds of individuals, in many cases leading to the complete elimination of some of the most active, worthy, and at one time, leading members of the iron and allied industries, still it must be acknowledged that during the past two years the United States Steel Corporation has not excited in the trade the feeling of distrust and animosity created by other trusts, but instead has steadily gained friends. We believe the reason for this has been the fairness and frankness with which the public has been treated by the Steel Corporation, in the free publicity of their reports, and the management of its business; their absolutely uniform fairness towards buyers, both on prices, and opportunity to make their purchases, for definite deliveries at definite prices, and the courtesy and consideration with which the powers they possess have been exercised.

"Contrast the feeling in the trade that exists to-day towards the American Smelting & Refining Company, (the Pig Lead Trust) caused by their dictatorial use, and we think abuse, of the powers that they enjoy through the 2½c. per pound duty that protects them in their monopoly, and one sees then at a glance why the U.S. Steel Corporation has won the confidence of the trade, become a settled institution, respected, and one might say popular."

WINNIPEG DELINQUENT LIST.

Winnipeg retailers are setting a worthy example to retailers in all parts of the country in the harmonious way in which they are working together and the intelligent manner in which they are reaping the benefits of organization. Every dealer who gives credit at all has his troubles with dead beats and slow pay customers. Often he is imposed upon by customers who ask for credit at a time when they owe heavy store bills to other merchants, bills which they are unable to pay or which they have no intention of paying. If he knew of this heavy indebtedness he would hesitate to supply goods on credit, but under ordinary circumstances he has no means of knowing about it.

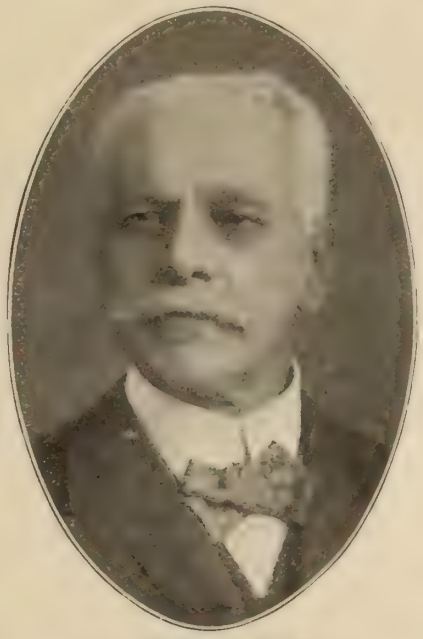
Winnipeg retailers have grappled with this problem in a practical way. Grocers, butchers, dry goods men, druggists, etc., have been organized in Winnipeg in separate associations by secretary W. A. Coulson. The hardware men have long had an efficient organization and their secretary is J. E. McRobie, secretary of the Western Canada Retail Hardware Association. The members of these various branch associations furnish Mr. Coulson and Mr. McRobie with the names and addresses of "delinquents" who refuse to pay their accounts and with whom no satisfactory settlement can be made; with the names and addresses of slow pay customers and with the names of delinquent and slow pay customers who have changed their addresses and cannot now be located by those dealers to whom they are in debt. The secretaries keep secret the sources of their information, but, from the data supplied, they compile a list which is supplied to association members in good standing. This list is revised every fortnight and is thus kept up to date in every respect.

The writer has before him the list dated January 15th, 1907. It contains the names and addresses of 144 "delinquent" customers and of 75 slow pay customers. It also gives the names and former addresses of 50 delinquent customers who cannot now be located.

All this is valuable information and must, in the course of a year, save the members many times their small membership fee. The list is in no sense a "black list." It is not posted up and the members are under no obligation not to sell or give credit to those who are listed. The dealer has the list for his own information and if he gives credit to a customer whom other dealers report as a "delinquent" he runs the risk and walks into danger with his eyes open.

MONTREAL HARDWARE MERGER.

To have spent thirty-eight years in active, strenuous life as a hardware merchant and to have lived with success and honor, and now to retire as a director in one of the largest commercial mergers in the hardware trade of Montreal—tells briefly the life of J. P. Seybold, head of the Seybold, Sons & Co., which was the other day merged with the Starke Hardware Co., into the Starke-Seybold, Ltd. Away back in 1869 a little hardware store was opened by J. P. Seybold at the corner of Murray and St. Joseph streets—the latter is now Notre Dame street. Young Seybold had saved a small sum of money. That was all he had in the world, except the capital of grit and determination and character. He stocked to the extent of about $1,600, a nervy thing to do in those days when credits were all six months. Mr. Seybold adopted a principle, which in telling, he said would be worth while impressing upon the retail merchants of the land to-day. It was, that he never lived on the wholesaler's money. That is, he never permitted his credits to go past what he could pay at any moment with his own money; he with his small capital, coupled with the cash he took in and the profits made, was able to pay his bills so that inside of 18 months he was getting his five per cent. discount. From that day it was plain sailing, although the difficulties were many.



At the unheard-of hour of a quarter to six every morning this young man was at his store. He was the boss and the staff and he looked after everyone. Often he said that by eight o'clock he had his expenses made for that day. The store never closed before 9 to 9.30 each evening and on Saturdays 11.30. Imagine what the young men of to-day would say if their employers "dared" to ask them to follow this routine for years. "There is only one secret about success," said Mr. Seybold, "and that is hard work and the concentration of effort upon one spot."

There were, however, bigger things looming up, and in 1878 a company was formed for wholesale trade under the caption, Seybold & Son Co., located on St. Paul street, just west of the new Coristine building. These premises were fitted for the wholesale trade and the little shop on Murray street passed into other hands. In 1901, at the time of the big Board of Trade fire, the Seybold building was completely destroyed. The head of the firm had resources and ability, and shortly on the opposite side of St. Paul street was erected the handsome structure of seven stories. This has been occupied for five years and the wholesale business has grown steadily and two sons, Gordon and Herbert, were taken in, giving an extra "S" to the name, as Seybold, Sons & Co. These handsome premises are now for sale or to let, as the merger occasions removal to the Starke Co.'s headquarters on St. Peter street.

The new directorate will include the Seybold sons Gordon and Herbert, and two Starke brothers, Robert and William, also J. P. Seybold, who will not be in active business. The new company will be capitalized at $100,000.

Strong Personality.

A glance at J. P. Seybold would see a man inclined to be medium of stature, but well built, erect, full-chested, and well dressed, with the air of an Old Country business man. Fifty-nine years, thirty-eight of which have been filled with hard, devoted work, have stamped their mark upon a broad, well-shaped head—have marked it with reflectiveness, but kept its serenity. The silvery hair is no indication of age, for he was that way at thirty. The rest of the face might be taken for a young man of thirty—clean shaven, rosy, as if the owner had never lost a night's sleep or a day's enjoyment.

J. P. SEYBOLD, MONTREAL
Who has Retired from Business After 38 Years of Active Business Life as a Hardware Merchant.

With a steady, clear eye, Mr. Seybold states proudly that he never speculated in his life outside of his own business. His well modulated voice and general avoidance of extravagance at once impels one to the idea that investments of one's earnings would be safe in any venture where such a man had control.

Asked how he came to get such a grasp of the French trade, he said, laconically: "I speak French; I learned it myself down on Murray street." That, however, is not the secret. He knows how to solve the French character as he knows other characters and happened to concentrate his mind on Quebec.

His fad is flowers. A devoted lover of botany and of floral culture, J. P. Seybold has a handsome conservatory attached to his home. Now that he will have time to spend, he claims his flowers will be one of his greatest pleasures. Beneficent work has not escaped him, for he is a life governor of the Montreal general hospital.

He declares that three-quarters of the failures in business are due to extravagant living and too much ambition on the part of young men.

RETAIL HARDWARE CONVENTIONS.

The convention of the Western Canada Retail Hardware Association in Winnipeg next week is an important one, and should be largely attended. It is feared, however, that owing to the railway blockades many dealers will be unable to visit Winnipeg for the gathering. Reports of disagreements over price arrangements have been received and this matter should be discussed at length by the delegates. Complaints are heard, also, of members being slow in paying their fees. This is short-sighted, if not careless action, as the secretary and executive cannot be expected to conduct the business of the association without funds. Even if a member disagrees with some actions taken he should consider the general advantages of organization and realize that it would be suicidal to allow the work of organization so far accomplished to go to naught owing to inactivity and shortness of funds. Stay inside and oppose the matters you do not favor, but pay your dues and have an organization to fight the mail order houses or other enemies when occasion requires.

The convention held at Halifax recently was merely a preliminary gathering. It was decided to organize a Nova Scotia Retail Hardware Association and over two dozen representative firms have already enrolled. At an early date another convention will be held at which officers will be elected.

Preparations for the annual convention of the Ontario Retail Hardware Association, to be held on Good Friday, March 29, are being made, and indications point to it being a large and enthusiastic gathering.

When a note comes due at a wholesale house and you have failed to satisfy it, you have delivered a sledge hammer blow against your own reputation.

HARDWARE TRADE GOSSIP

Quebec

Leblanc Joliette was in Montreal last week on business.

E. Monbleau, St. Johns, Que., was in Montreal on business last week.

C. O. Gervais, St. Johns, Que., was in Montreal last week on business.

A. J. Silberstein, of New York, was in Montreal on business this week.

August Tanguay, of St. Johns, Que., was in Montreal on business last week.

J. Thompson, Sherbrooke, Que., was in Montreal last week purchasing supplies.

A. T. Hunter, of Howick, Que., was among the busy men in Montreal last week.

J. A. Plourde, Watton, Que., called on some of the Montreal jobbers last week.

Mr. Cuzner, of McDougall & Cuzner, Ottawa, called on the Montreal jobbers last week.

J. Beverley Robinson, metal manufacturers' agent, Montreal, has returned from a busines strip to Europe.

Mr. Stackhouse, of Stackhouse and McElroy, Kinburn, Ont., called on some of the Montreal wholesalers last week.

Geo. Brown, Eastern Townships, traveler for Caverhill, Learmont & Co., Montreal, was a caller at the Montreal office of Hardware and Metal last week.

Mr. Abrams, of Rostern, Sask., is in Montreal at present, after interviewing the Ottawa Government about several matters in connection with his business.

Jack Botrell, representing the Canadian Fairbanks Co., in Winnipeg, has successfully avoided snow drifts and railway tie-ups, and arrived in Montreal.

J. W. Harris, head of the J. W. Harris Co., Montreal, spent a portion of this week in New York. He leaves shortly for Winnipeg and other western points.

Robert Munro, managing director of the Canada Paint Co., Montreal, has left for Pine Hurst, North Carolina, where he will remain for the next month.

Wm. Hall, of the Hall Engineering Works, Montreal, returned this week from a trip through the large manufacturing centres of Great Britain, and reported several new agencies, as well as great prosperity everywhere.

F. Hammar, of the firm of Schuchardt & Schutte, New York, visited Montreal this week and was introduced to the trade by J. J. Sophus, Montreal, representative of the firm.

Harry A. Norton, vice-president of the Norton Jack Co., of Boston, was a caller at the Montreal office of Hardware and Metal last week. Mr. Norton has just returned from a trip through India, Egypt, and the Holy Land.

J. J. Sophus, Montreal, representative of Schuchardt & Schutte, New York, spent a portion of the week in Quebec, visiting the trade. Mr. Sophus is going to be married next week, and will take up his residence permanently in Montreal.

Chas. Dietrich, of Shurly and Dietrich, saw manufacturers, of Galt, is in Montreal. Business in their three leading lines is exceedingly good all through Quebec, and he says the story of the Key and the San Francisco disaster, is being fired at him from all sides.

H. G. Eadie, and H. P. Douglas, of Montreal, have formed a partnership under the name of Eadie and Douglas, to carry an extensive building and contracting business. Mr. Douglas was formerly with the Canadian White Co., and with his partner will make a strong business team.

Ontario.

Dreaney Bros., hardware merchants of Cobalt, have opened a branch store at Englehart.

H. Munderloh, of Munderloh & Co., Montreal, was a visitor in Toronto during the past week.

Fred Somerville, of the Toronto plumbing supply house which bears his name, is on a business trip to Winnipeg.

The tin shop of Robert Maines, tinsmith and plumber, Orillia, was completely destroyed by fire on Monday last.

C. L. Macnab, of Macnab Bros., hardware merchants, Orillia, called on Toronto jobbers last week on his way to New York.

James Stewart, hardware merchant of Pembroke, was quietly married on Wednesday of last week to Miss Charlotte Cameron, also of Pembroke.

Chas. P. Brown, formerly of McMurtry's hardware store, Galt, has taken a position with the Taylor Hardware Company of New Liskeard.

C. S. E. Saunders, of London, died at his home last week. Mr. Saunders had been in the employ of James Wright and Company, hardware merchants of London, since boyhood, having done the buying for his department for years.

Clark (Baldy) Graham, who for a number of years was employed with Rice Lewis and Sons, Toronto, has accepted a position with Lewis Bros, Montreal, as their travelling representative in Toronto.

Andrew Archibald, for many years with Chesney & Smiley, Seaforth, has joined the firm, which will be known in future as Chesney & Archibald instead of Chesney & Wilson, as previously announced. The new proprietors are both young men and have a prosperous business. Mr. Smiley, who came from St. Thomas five years ago, is now at Aylmer taking over the Rumball business at that town.

Western Canada.

Hintz & Lynch, hardware merchants of Yonda, Sask., have dissolved partnership.

Schwanz Bros., hardware merchants, of Rocanville, Man., have dissolved partnership.

James & Hughes, hardware merchants of Napinka, Man., have dissolved partnership.

The Stovel Hardware Company, of Edmonton, Alberta, will change hands in a short time.

Messrs. Hockin & Siddoner, Moose Jaw, Sask., will erect a large hardware store shortly.

W. B. Shannon & Company, hardware merchants, of Carberry, Man., are retiring from business.

Rattray, Cameron & Company, dealers in hardware specialties, Winnipeg, suffered loss by fire last week.

Owing to shortage of coal the Sherwin-Williams paint factory of Winnipeg had to close this week.

Siemens & Wiele, hardware merchants of Herbert, Sask., have dissolved partnership. Business will be carried on by G. P. Siemens.

The Brandon Hardware Company has made application to the Manitoba Government for power to increase its capital stock to $150,000.

The Peart Bros. Company, hardware merchants of Regina, will open for business this week in the old stand of Smith & Ferguson Company.

R. P. Maclennan, hardware merchant, Vancouver, headed the Liberal ticket in the recent B.C. elections, but five Conservatives romped in ahead of him.

J. G. Rattray, of Virden, Man., has been nominated by the Liberals of Virden as their candidate for the Legislature in the approaching Manitoba elections. Mr. Rattray is proprietor of a hardware store in Pipestone.

Maritime Provinces.

The members of the St. John Iron and Hardware Association held the thirteenth annual dinner at the Union Club on January 30. Elaborate preparations had been made for the banquet, which was a very enjoyable function. The menu was in the form of a horseshoe, and formed an appropriate souvenir of the occasion.

TORONTO BOARD OF TRADE.

R. C. Steele, of the Steele, Briggs Company, seed merchants, has been chosen president of the Toronto Board of Trade to succeed Peley Howland, of H. S. Howland Sons & Co. For the executive council, Peleg Howland, Sigmund Samuel, of Samuel, Benjamin & Co.; A. D. Fisher, skate manufacturer, and Mark H. Irish, of the Monarch Brass Manufacturing Company, are amongst those nominated, while A. Burdette Lee, of Rice Lewis & Son, is one of the ten candidates for representatives on the Exhibition Board.

Markets and Market Notes

(For detailed prices see Current Market Quotations, page 66.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL

Damar Varnish—Advanced.
Brass Safety Chain—Advanced 10 per cent.
Flat Irons—Several lines show a five per cent. advance.
Hay Wire—Advanced five cents.
Wire Staples—Five cents higher.
Wire Nails—Advanced five cents.

TORONTO.

Cast Iron Fittings—Now 57½ per cent.
Ingot Tin—Reaction and higher prices.
Copper—Both ingots and sheets advanced.
Old Metals—Several lines higher.
Damar Varnish—Advanced.
Bluestone—Quoted higher.

Montreal Hardware Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, Feb. 8, 1907.

Business still holds good in hardware circles, but heavy storms are delaying shipments in all quarters and the spring is likely to find the railways with more freight on hand than they will be able to handle comfortably. This means that the merchant who leaves his purchasing till the last minute will find himself short on several lines. Order now and get your goods started, and you will be more likely to have goods on hand when called for.

Brass safety chain has advanced 10 per cent., also some lines of flat irons show a 5 per cent. advance. Hay wire, wire staples and wire nails have all advanced 5 cents over last week's price.

AXES — We still quote: $7.60 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

LANTERNS. — Our prices are: "Prism" globes, $1.20; Cold blast, $6.50; No. 0, Safety, $4.00.

COW TIES AND STALL FIXTURES —We still quote; Cow ties, discount 40 per cent. off list; stall fixtures, discount 35 per cent. off list.

SLEIGH BELLS—Our prices remain: Back straps, 30c to $2.50; body straps, 70c to $3.50; York Eye bells, common, 70c. to $1.50; pear shape, $1.15 to $2; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

RIVETS AND BURRS — —We are still quoting: Best iron rivets, section carriage, and wagon box black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 25 per cent. off, and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 15 per cent., subject to usual charge for half-pound boxes.

HAY WIRE Prices have advanced 5 cents. We now quote: No. 13, $2.60; No. 14, $2.70; No. 15, $2.85; f.o.b., Montreal.

MACHINE SCREWS—No advance yet. We still quote: Flat head, iron, 35 per cent., flat head brass, 35 per cent., Felisterhead, iron, 30 per cent.. Felisterhead, brass, 25 per cent.

BOLTS AND NUTS—Scarce, discounts remain: Carriage bolts, 3 and under, 60 and 10; 7-16 and larger, 55 per cent.; fancy carriage bolts, 50 per cent.; sleigh shoe bolts, ⅜ and under, 60 per cent.; 7-16 and over, 50 per cent.; machine bolts, ⅜ and under, 60 per cent.; 7-16 and larger, 55 per cent.

HORSE NAILS.—Discounts remain: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.

WIRE NAILS—Advanced 5 cents per keg. Our price is now $2.45 per keg f.o.b., Montreal.

CUT NAILS—We still quote: $2.30 per keg base f.o.b., Montreal.

HORSESHOES—Our prices remain: P.B. new pattern, base price, $3.50 per 100 lbs.; M.R.M. Co., latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 lbs. More than three sizes, 25c. per 100 lbs. extra.

BUILDING PAPER—No change in last week's prices.

CEMENT AND FIREBRICK.—No change in prices. We are still quoting: "Lehigh" Portland in wood, $2.54, in cotton sacks, $2.39; in paper sacks, $2.31. Lefarge (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American $30 to $35; White Bros.' English cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—Our quotations remain: 5-16 inch, $4.40; 3-8 inch, $3.90; 7-16 inch, $3.70; 1-2 inch, $3.50; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.20; 7-8 inch, $3.10; 1 inch, $3.10.

SHOT—Our prices remain as follows: Shot packed in 25-lb. bags, ordinary drop AAA to dust, $7 per 100 lbs.; chilled, No. 1—10, $7.50 per 100 lbs.; brick and seal, $8 per 100 lbs.; ball, $8.50 per 100 lbs. Net list. Bags less than 25 lbs., ½c. per lb. extra, net; f.o.b. Montreal, Toronto, Hamilton, London, St. John, Halifax.

AMMUNITION — Slow. Very little sold. Our prices remain: Loaded with black powder, 12 and 16 gauge, per 1,000, $15; 10 gauge, per 1,000, $18; loaded with smokeless powder, 12 and 16 gauge, per 1,000, $20.50; 10 gauge, $23.50.

GREEN WIRE CLOTH.—We continue to quote: In 100 foot rolls, $1.62½ per hundred square feet, in 50 feet rolls, $1.67½ per hundred square feet.

Toronto Hardware Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, February 8, 1907

Business for the past week has been quiet, some firms having had their travelers off the road helping finish up stock taking and also filling orders which were taken the previous week.

Jobbers whose year ended in December managed to have their stock taking finished between Christmas and New Years.

Orders continue to steadily arrive, even with travelers off the road, as all retail merchants are anxious to stock up before any further advance.

No price changes are quoted this week and everything remains steady at former quotations.

AXES AND HANDLES—Many large orders for these articles were taken some time ago, but the trade appears to be greatly interested in the new lines which are exhibited for various jobbers by their traveling representatives.

WASHING MACHINES—These articles, along with various household devices, are meeting with an ever increasing demand for spring trade.

SPORTING GOODS—The remarkably fine winter which we have so far been favored with has greatly added to the demand for many lines. The shortage in skates was greatly in evidence some time ago, and at present some lines are not procurable at any price. While the snowshoe demand is very good in northern Ontario it is not above the ordinary in the eastern or western sections. Trap shooting is at present greatly indulged in and, in consequence, ammunition is selling very well.

CHAIN—Remains at our former quota-

tions ⅜ in., $5.50; 9-16 in., $3.55; ½ in., $3.60; 5-16 in., $3.85; 5-8 in., $4.10; 5-16 in., $4.70; 1-4 in., $5.10.

RIVETS AND BURRS—Remain firm at the advanced price. Copper being at such a high price, and so scarce, an other advance is probable in a short time.

SCREWS—Exceptionally large orders have been received by jobbers during the past couple of weeks, and in every case orders have been satisfactorily filled, which goes to show the large demand was anticipated.

BOLTS AND NUTS—These articles continue to be very largely asked for, but very hard to procure.

TOOLS—A good demand still continues for these various articles and many merchants are displaying a full line in their show windows.

SHOVELS—Demand is very good. Orders which were taken are now being shipped so as to be ready for the opening of spring, when large quantities will be used in connection with the many buildings to be erected.

EXTENSION AND STEP LADDERS—These remain at former quotations: 11 cents per foot for 3 to 6 feet, and 12 cents per foot for 7 to 10-foot ladders. Waggoner extension ladders 40 per cent.

POULTRY NETTING—Orders are beginning to be filled, and shipments made daily. We still quote: 2-inch mesh, 19 w.g., discount 50 and 10 per cent., all others 50 per cent.

WIRE FENCING—The same applies to this line, as all booked orders are being rapidly filled and prices remain as before.

OILED AND ANNEALED WIRE—(Canadian)—Gauge 10, $2.41; gauge 11, $2.47; gauge 12, $2.55, per 100 lbs.

WIRE NAILS—Remain firm at the advanced price of $2.40 base, with continued large orders from every district.

CUT NAILS—We quote $2.30 base f.o.b. Montreal; Toronto, 20c. higher.

HORSENAILS—"C" brand 40, 10 and 7½ off list; "M.R.M. brand 60 per cent. off.

HORSESHOES—The demand for horseshoes has been very good during the last couple of months, large quantities having been disposed of in northern Ontario. Quotations remain at former prices. P. B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1, and smaller, $4.05; snow, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toeweight, all sizes, 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per 100 lbs. extra; more than three sizes in a keg, 25c. per 100 lbs. extra.

BUILDING PAPER—Business is picking up considerably in this line. As soon as spring opens things will largely increase the sale.

CEMENT—For carload orders, f.o.b. Toronto, we quote: Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Portland, $2.05 upwards.

FIREBRICK—English and Scotch firebrick, $27 to $30; American low-grade, $23 to $25; high-grade, $27.50 to $35.

HIDES, WOOL AND FURS — Hides are slightly lower. Some furs, cross fox, timber wolf and winter and western rats are higher. Tallow is higher.

Montreal Metal Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, February 8, 1907

No changes are reported in the metal markets this week, although copper and tin are firming up and jobbers generally predict that another advance, in copper at least, may be expected very shortly. All other metals remain practically the same, with no outward appearance of advancing just at present.

Sellers of old material report a steady business, all lines moving well. The American market has weakened slightly in scrap iron, and although this does not affect us here, it is pleasant to hear of a lower price on anything, even though it is across the border.

COPPER — Wherever there's copper you'll find the long arm of "Amalgamated" working overtime, with the result that this metal is still very short, and although no new advances are reported the market is very firm. Our quotations remain: Ingot copper, 26½ to 27 cents; sheet copper, base sizes, 34 cents.

INGOT TIN — Market again firming up. We still quote: 45½ to 46 cents per pound.

ZINC SPELTER — We still quote: $7.50 to $7.75 per 100 pounds.

PIG LEAD—Very firm. Our prices remain: $5.50 to $5.60 per 100 lbs.

ANTIMONY—No change over last week's prices, we still quote: 27½ to 28 cts. per pound.

PIG IRON. — Some lines show advances. We now quote: Londonderry, $24.50; Carron, No. 1, $27.00; Carron, special, $25.50; Summerlee, No. 2, selected, $25.00; Summerlee, No. 3, soft, $23.50.

BOILER TUBES. — Remain very firm. Our prices are: 1½ to 2 in., $9.50; 2¼ in., $10.35; 2½ in., $11.50; 3 in., $13.00; 3½ in., $17.00; 4 in., $21.50; 5 in., $45.00.

TOOL STEEL — Our prices remain: Colonial Black Diamond, 8c to 9c; Sanderson's 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Hardening," 65c. per pound; Conqueror, 7½c.; Conqueror high speed steel, 60c.; Jowitt's Diamond J., 6¼c. to 7c.; Jowitt's best, 11c. to 11½c.

MERCHANT STEEL.—Our prices are as follows: Sleigh shoe, $2.25; tire, $2.40, spring, $2.75; toecalk, $3.05; machinery iron finish, $2.40; reeled machinery steel, $2.75; mild, $2.25 base and upwards; square harrow teeth $2.40; band steel, $2.45 base. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING—Present prices are: 3-16 inch to ¼ inch, $7.25; 5-16 inch to 11-32 inch, $6.20; ⅜ inch to 17-32 inch, $5.15; 9-16 inch to 47-64 inch, $4.45; ½ inch to 17-16 inch, $4.10; 1½ inch to 3 inch, $3.75; 3⅛ to 3 7-16 inch, $3.92; 3½ inch to 3 15-16 inch, $4.10; 4 inch to 4 7-16 inch, $4.45; 4½ inch to 4 15-16 inch, $4.80. This is equivalent to 30 per cent. off list.

GALVANIZED IRON. — Shows advances. We now quote: Queen's Head, 28 gauge, $4.70; 26 gauge, $4.45; 22 to 24 gauge, $4.20; 16 to 20 gauge, $3.95; Apollo, 28 gauge, $4.45; 26 gauge, $4.30; 22 and 24 gauge, $3.75; 16 and 20 gauge, $3.60; Comet, 28 gauge, $4.45; 26 gauge, $4.35; 22 and 24 gauge, $3.75; 16 to 20 gauge, $3.60; Fleur-de-Lis, 28 gauge, $4.55; 26 gauge, $4.30; 22 and 24 gauge, $4.05; 16 to 20 gauge, $3.80; Gorbals "Best Best," 28 gauge, $4.55; Colborne Crown, 28 gauge, $4.45; 26 gauge, $4.30; 24 gauge, $3.75. In less than case lots, 25c extra.

OLD MATERIAL — American market weakened slightly during the week on scrap iron, but has not affected prices here. We still quote: Heavy copper, 20c. per lb.; light copper, 17c. per lb.; heavy red brass, 17c. per lb.; heavy yellow brass, 14c per lb.; light brass, 10 to 10½c per lb.; tea lead, 4½c per lb.; heavy lead, 4½c. per lb.; scrap zinc, 4¼c. per lb.; No. 1 wrought $17.00 per ton; No. 2 wrought $6.00 per ton; No. 1 machinery, $18.00 per ton; stove plate, $13.00 per ton; old rubber, 10½ cents per lb.; mixed rags, 1 to 1¼c per lb.

The Niagara Falls Machine and Foundry Company, Niagara Falls, Ont., have secured a large contract to supply cast and wrought iron work for the Michigan Central's Detroit river tunnel from the contractors, the Butler Bros. and Hoof Company. They also have a contract to supply fire hydrants for the city of Toronto. The company will enlarge their foundry at once.

Toronto Metal Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Feb 8, 1907

February, usually a dull month in the metal business, is a busy one this year and indications are that, like January, it will show a record-breaking volume of business transacted. Buyers are conservative and, while covering their requirements for the coming season, are not being carried off their feet by the speculative possibilities of the market.

Pig iron is, according to cable reports, much easier in Great Britain Beginning last August Cleveland Warrants rose steadily from 51s. 6d. to 64s. early in December, since when they have dropped to 57s.

It is hard to believe that this movement had any other foundation than the prospective—and afterwards realized American demand. The warrant market opened in 1906 at 55s., and dropped to a low point of 48s. 6d. late in March. There was a slight advance thereafter, gliding into the heavier advance noted above as commencing in August. Conditions in the British iron trade have not so changed. It has been uniformly prosperous throughout the year and the varying quotations are the result of speculation. On the best English and Scotch grades the quotations we give are close. As before, Canadian furnaces are booked ahead for two or three quarters, while a fair amount of British iron is being imported.

Copper and tin are the leading figures on the bill this week, copper being advanced half a cent, and tin having firmed up to the figures maintained for some time past. The market in Toronto is practically bare of copper and as it is predicted that the production of the Lake Superior region in 1907 will be smaller than in 1906, conditions seem favorable for even higher prices. The Amalgamated Copper Company now has the market in its own hands and as orders for future delivery are not being accepted it is plain that lower prices cannot be looked for.

There is talk of further advances on plates and sheets, but we are not changing our figures this week. Sheet lead is quoted higher by some jobbers.

PIG IRON—Import orders are coming through satisfactory. Hamilton, Midland and Londonderry are off the market, and Radnor is quoted at $33 at furnace. Middlesborough No. 1 is quoted at $24.50, and Summerlee No. 1 at $26 f.o.b., Toronto.

On bar iron prices are firm and we still quote: $2.30 f.o.b., Toronto, with 2 per cent. discount.

TIN—Ingots have experienced a sharp reaction and prices are again firm at 45c with more asked in some cases. Plates are firm and unchanged.

SHEETS AND PLATES—No further advances have been made on black sheets or Canada plates, although there is talk of higher prices. Galvanized sheets are in good demand.

BRASS—Light stocks are reported everywhere with deliveries hard to obtain. We continue to quote 30 cents per pound.

COPPER—The market is bare and higher prices seem probable. We continue to quote: Ingot copper, $26.50 per 100 lbs., and sheet copper, $32 per 100 lbs.

LEAD—Stocks are light with a very lively demand, and prices very firm. We quote: $5.40 for imported pig and $5.75 to $6.00 for bar lead. For sheet lead $7 is asked.

ZINC SPELTER—Stocks continue light with the market active. We quote 7½c. per lb. for foreign and 7c. per lb. for domestic. Sheet zinc is quoted at 8 1-4c. in casks, and 8 1-2c. in part casks.

BOILER PLATES AND TUBES.—An advance is looked for but we still quote: Plates, per 100 lbs., ¼ in. to ½ in., $2.50; ⅝ in., $2.35 heads, per 100 lbs., $2.75; tank plates, 3-16 in., $2.65; tubes, per 100 feet, 1½ in., $8.50; 2, $9; 2 1-2, $11.30; 3, $12.50; 3 1-2, $16; 4, $20.00. Terms, 2 per cent. off.

ANTIMONY.—More activity is reported, but stocks are plentiful Prices are unchanged at 27c. per pound.

OLD MATERIAL.—Dealers report a good demand with supplies coming in well. Their buying prices are: Heavy copper and wire, 20 cents per lb.; light copper, 18c per lb.; heavy red brass, 18c per lb.; heavy yellow brass, 15c. per lb.; light brass, 11c. per lb.; tea lead, $4.25 per 100 lbs.; heavy lead, $4.50 per 100 lbs.; scrap zinc, 4½c. per lb.; No. 1 wrought iron, $15; No. 2 wrought, $8; machinery cast scrap, $18; stove plate, $14; malleable and steel, $9; old rubbers, 10½c. per pound; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL — No shortages are reported. We still quote: Standard Hocking soft coal f.o.b. at mines, lump $1.50, ¾ inch, $1.40; run of mine, $1.30; nut, $1.25; N. & S., $1; P. & S. 85c. Youghiogheny soft coal in cars, bonder at bridges: lump, $2.60; ¾ inch, $2.50; mine run, $2.40; slack, $2.15.

United States Metal Markets

From the Iron Age, Feb. 7, 1907.

In the markets east of the Allegheny mountains there has been little movement during the past week, after the heavy business done in January. The demand, both for early and late delivery, is rather light, and a canvass of the trade in different sections indicates considerable indifference at the present level of prices. Considerable foreign iron is coming in and is still due, but prices are lower, one cargo to arrive in the Delaware having sold at a shade over $21. In the central west and in the Chicago district there is a good deal of inquiry for the second half, notably for malleable Bessemer Pittsburg reports that the Jones & Laughlin Steel Company has purchased a considerable quantity of Bessemer pig to make up for inadequate output of its own furnaces, some of which are out of blast

The tonnage placed for plates is stated to have been unprecedented, and the leading mills are now crowded with work for the next four or five months

Specifications for structural material have been coming in at a satisfactory rate during the past few weeks

There has been a tremendous pressure for tubular goods. Among the orders recently placed is one lot of 1,000 tons for the Pennsylvania Company. Quite a number of moderate sized contracts for cast iron pipe are cropping up

The demand for sheets and for steel bars continues lively, and premiums of 10c. per box are being paid for tin plate for delivery during the third quarter.

From the Iron Trade Review, Feb. 7, 1907

Pig iron is the centre of attraction because of the many adverse currents affecting it. The agitation for the repeal of the advance in southern freight rates, the loud protest against the exasperating delays to shipments, and the efforts of several large consuming interests to secure lower prices, have produced a situation containing an element of uncertainty. This is manifested by a disposition on the part of smaller melters to postpone purchases until it is more definitely known what the railroads will accomplish in the next thirty days towards moving the large tonnage of iron that has accumulated on southern yrds.

Following the publication about two weeks ago of reports of weakness in the American pig iron market, a determined bear assault was made on warrant iron in England, and at least one large American consumer was able to buy a round tonnage at about $16.50 New Orleans. The report of this transaction has been noised about within a few days, and has caused hesitancy on the part of some buyers, but all indications are that it would be extremely difficult to buy any considerable tonnage of foreign at so low a price, and it is not probable that the importation of iron will result in demoralizing prices in this country to any great extent. Practically all of the foreign iron which can be delivered before April 7 has been sold and the amount that can be landed in this country after that date does not promise to be very large. Taken as a whole, the pig iron market is easier, but with little, if any evidence of weakness.

London, Eng., Metal Markets

From Metal Market Report, Feb 6, 1907.

Cleveland warrants are quoted at 56s. 9d., and Glasgow Standard warrants at 56s., making price, as compared with last week, unchanged on Cleveland warrants and Glasgow Standard warants.

TIN—Spot tin opened firm at £193 5s., futures at £192 15s., and after sales of 380 tons of spot and 560 tons of futures closed easy at £193 for spot, £192 7s. 6d. for futures, making price compared with last week £4 higher on spot and £3 7s. 6d. higher on futures.

COPPER—Spot copper opened steady at £107 10s., futures £108 10s., and after sales of 300 tons of spot and 600 tons

of futures closed quiet at £107 7s. 6d. for spot, and £105 7s. 6d. for futures, making price compared with last week £1 2s 6d. higher on spot and 15s. higher on futures.

LEAD—The market closed at £19 12s. 6d., making price as compared with last week 5s. 6d. lower.

SPELTER—The market closed at £26, making price as compared with last week 15s. lower.

Calgary Hardware Trade News

Feb. 2. 1907.

The questions of cheap power and street cars are still being thrashed out between the council and the syndicate. The power proposition is one of considerable importance to manufacturers and great interest is being taken in the matter locally. It is expected, if the offer of the syndicate is not accepted, that the municipality will tackle the matter on a larger scale than they have so far attempted.

G. F. Stephens & Co., paint manufacturers are having a large warehouse erected on Eighth Avenue, the main business thoroughfare of the city. The block, which is almost completed, is built of brick terra cotta finished front. Facing to Eighth Avenue there is a large covered entrance suitable for shipping, while the block extends to the spur track at the rear where there is a large receiving platform at which goods can be unloaded direct from the cars. The block consists of a deep basement with three floors above, electric elevators will be fitted to run from basement to top. The front is fitted with two large segment head windows and the designs for the interior work here, show a tasteful partition in glass, giving suitable accommodation for show room and offices. Messrs. Stephens will occupy the east half, and the west part has been leased for five years to Ames, Holden & Co., wholesale boot and shoe manufacturers, of Montreal.

Manson, Campbell & Co., of Chatham, Ontario, manufacturers of fanning mills, incubators, etc., also propose building a large warehouse here. J. I. Campbell, the Alberta and B.C. manager, has made Calgary his headquarters for the past three years, but with the rapid expansion of the West, their present premises have become too small. The new block will be in the centre of the city where a suitable site has been acquired.

Very little progress has been made in the building line during the past two months owing to the almost incessant severe frost. Builders also complain of the prohibitive price of lumber, but present tendencies point to stiff prices for some time to come.

London Hardware Trade News

A hardware store will be opened next week in the new Sovereign Bank building, at the corner of Dundas and Adelaide Streets. Mr. William Kilpatrick, a well known hardware salesman of this city, has leased the premises and will sever his connection with the Purdom-Gillespie Hardware Company, by whom he is now employed, on the 9th instant. Mr. Kilpatrick has been with the Purdom-Gillespie Hardware Co. for the past three years. He began his experience in the trade as an employe of James Wright & Co., and later worked for Mr. James Reid. His knowledge of the business is extensive and his ability is such that his friends are confident of the success of his venture.

* * *

The interest shown by the public generally in the progress of the Hardware Hockey League is an indication that the various teams are composed of good players. Two evenings a week games are played at the Simcoe Street rink by league teams and there is a large attendance at every game. The dealers represented in the league are: The Purdom-Gillespie Co., James Cowan, A. Westman, Geo. Taylor & Son and McLean's. The staffs of the last two houses on the list were drawn upon to make up one team and the others put in a team each. One series of games has been played and the second series is in progress, with the Purdom-Gillespie's in the lead. Mr. Phelps of the Hobbs Hardware Co., is the efficient official referee.

* * *

A. J. Morgan, now in business on Dundas Street near Wellington, is soon to locate in the store now occupied by Clark & Smith on Dundas Street near Talbot. Mr. Morgan deals in garden supplies, poultry and pet animal supplies, etc. The premises newly leased by him are larger and much nearer the market square than his present stand. Mr. Morgan was with the Hobbs Hardware Co. before he went into business for himself.

* * *

Ex-Mayor George Taylor who established the Geo. Taylor Hardware Co. at New Liskeard a few years ago, has made several fortunate investments in mining property. He is one of the pioneers of New Ontario. His company has a branch store at Cobalt and last week the mining right in the lot on which the company's stable stands was sold for over $5,000.

B.C. Hardware Trade News

Vancouver, January 31, 1907.

With politics in the air to suffocation, and bad weather, there has not been the building activity during the month of January that would otherwise have been recorded. Therefore trade in builders' hardware has been lighter. The sawmills have nearly all been shut down more or less, and many of the upcoast logging camps have hardly operated at all in the month, so that trade in the lumber supply line has been light for the hardware men. Nevertheless none complain, as business for the first of the year is fully as good as expected. Stock-taking occupied most of the dealers at the first of the month, and that being over, the decks are cleared ready for a busy season. And the prospects are that the incoming building season will eclipse all previous records.

* * *

Though building operations have not not been very active, for the causes mentioned, nevertheless another record for Vancouver has been made by the number of permits issued, the total value being for the month, $187,265. This is the largest on record for any January. In 1905 the total permits issued was $185,000. Last year it was but $176,425.

* * *

Steamer Tottenham, which has been delayed in loading because of ice in the Fraser river, has finished her big lumber cargo at this port. She loaded the first portion of the cargo at Millside, Fraser river, but her agents moved her to Vancouver for fear of the river freezing, which it afterwards did. The remainder of the cargo had to be lightered to the big tramp steamer. She is taking out railroad ties and timbers and her total is to be over 4,000,000 feet, which is the record for any vessel loading at a Pacific coast port. The Tottenham already holds the record, having taken 3,800,000 feet from Portland on a previous occasion. Her present cargo goes to Port San Marques, Mexico.

* * *

Five carloads of machinery for the big pulp mill the Canadian Pacific Sulphite Pulp & Paper Co. are building at Swanson Bay, have reached this port and will be sent forward as soon as space can be secured on one of the coast steamers. Other cars of machinery are en route and more is to be shipped yet for the plant, the first of its kind in the province. J. M. Mackinnon, managing director of the company, has gone north to inspect work now under way at the site of the mill. A sawmill is in operation getting out timbers for the various buildings, a wharf has already been built and other buildings are in process of construction. The company is amply provided with capital, the entire stock having been subscribed for in England. A very large area of choice spruce timber has been secured and a water power is to be developed for operating the mill.

* * *

J. H. Pillsbury, C.E., engineer-in-charge of survey work on the townsite of Prince Rupert, the G.T.P. terminal city up the coast, has gone north to conduct active operations in the field. He left by the steamer Amur a few days ago. By the same steamer the representatives of the United Supply & Contracting Co. went north to look after contracts they have secured from the G.T.P. for clearing portions of the townsite. The logging engines and other machinery for the clearing work were shipped north on the freighting steamer Venture, and when they arrive a large gang of men is to be put to work at once. The townsite is not to be placed in the market till next Fall, by which time a great deal of clearing will have been done.

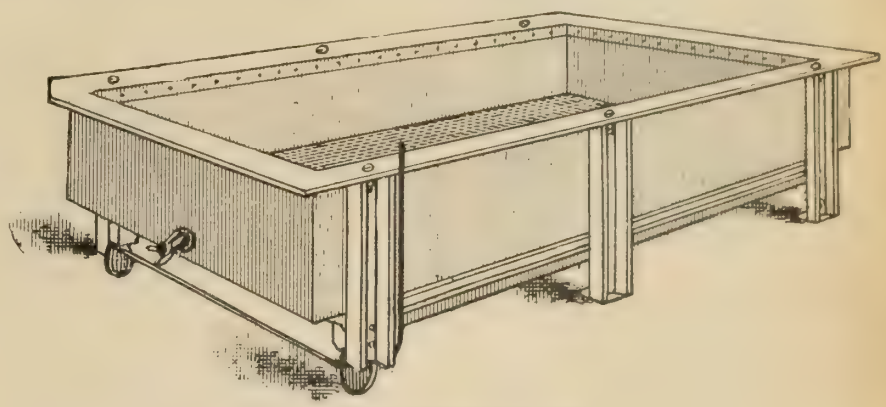
* * *

Iron ores of Vancouver Island in the vicinity of Quatsino Sound are to be carried to Irondale, Wash., where James A. Moore, of Seattle, has bought the old blast furnaces and steel plant, which he intends to refit, enlarge and operate on a large scale. It is announced that a number of steamers have been purchased to be put in commission in the ore-carrying trade, exclusively, from the mines of the northern part of Vancou-

ver Island, where Mr. Moore holds a number of valuable deposits. The old German steamer Mariechen, badly wrecked on the west coast of Vancouver Island, has also been purchased by Mr. Moore, who intends fitting it up as a barge to be put in the ore-carrying trade as well.

Car shortage is still affecting the smelter industry of the interior because there are not enough cars available to carry coal and coke from the mines to the smelters. There is reported to be sufficient coke in readiness, but it is difficult, if not impossible, to secure cars to load. Some of the smelters in the boundary district have been only running part of their furnaces because of this coke shortage. The Trail smelter has also been running only part of its plant. The Northport smelter, in Washington, which is once more running on Le Roi ores, has been running full time, but the big surplus of ore accumulated during the coal miners' strike has not been reduced, and with fresh shipments daily, wil not be materially lessened.

* * *



Turbines or horizontal type are to be used in developing the water power of Stave Lake Power Co., was in charge is under construction. This is to be the initial installation, and there is room for a vastly larger power when demand warrants the capital expenditure on installing the plant to generate it. The horizontal type turbines have been installed at Niagara and at the Kakabeka Falls plant of the Kamin' iquia Power Co., near Ft. William. t both these plants, Wm. Kennedy, .E., of Montreal, who is consulting gineer for the Stave Lake Power Co., was in charge of installation of the plant.

Stave Lake is but 38 miles from Vancouver, so that the prospects of power supply for industries for the terminal city are very bright. It is expected that the power company will have their dam installed before high water in the spring and tenders for the turbines and generating plant will be called for in a few weeks, so that construction will proceed quickly. Three electric generators, of 5,000 kilowatt capacity each, will be installed in the power house. These will likely be made by one of the large Canadian manufacturers of electrical machinery in the east.

Work on construction of the new electric line to be built by the B.C. Electric Railway from New Westminster to Eburne, along the north shore of the Fraser River, is proceeding as fast as weather permits. Nearly all the grading has been done and rails will be laid early in the spring. This line will traverse a section but little settled up so far, and the entire distance is being divided in acreage of 3, 4, 5 and 10 acre blocks, most of which is being bought by people who intend making their homes on the land and raising fruit, etc. The line will also serve a large portion of the delta lands of the Fraser not now in touch with any railway. The whole district is subsidiary to the cities of New Westminster and Vancouver.

NEW STEEL CHEESE VAT.

The Steel Trough and Machine Company, Tweed, Ont., are introducing a steel vat support which should sell well to dairymen. They will supply the supports to tinsmiths or hardwaremen desiring to make their own tinwork, or will supply both tanks and supports when desired for twin or single cream vats, curd sinks, skim milk vats or water tanks The steel vat support is built on such a principle that the stock frame work can be knocked down and bundled for shipment, which makes freight on it very low. The legs are made of steel channel like what is used is bridge or structural work, giving the greatest strength to the least weight; they are held together by cross sections firmly bolted to them. Bars of steel run lengthwise in cross sections to which they are bolted to support the bottom of pan. The tank itself is made of heavy galvanized steel riveted and soldered and reinforced around the top edge with heavy angle steel which extends outwardly over the top of the legs where it is bolted. Thus almost the

All Steel Vat Support and Vat.

entire weight of vat rests directly on angle steel and legs. The tank is not riveted or bolted to legs or framework otherwise than at angle steel as described above so that the twisting of the frame work would not in any way injure the tank or cause it to leak. By the removal of the bolts at top of legs the tank can be lifted out entirely independent of the frame work.

CLEAN OUT HORSE BLANKETS.

Are the robes and blankets selling as they should ? The season for their sale is passing and they do not make the best line in the world to carry over. Never again will they look so attractive as when new, their colors uninjured by dust or a degree of fading ; besides there are mice and moths to guard against. There is still enough cold weather ahead to render them of interest, although the time for it is shortenning up enough to justify season sales and sale prices.

Find out the people who will be in need of blankets by the beginning of another season and give them enough of an inducement to buy now to pay them for the trouble of carrying their purchase over. They can afford to carry it cheaper than you can because with them it is only a purchase in advance of something they are sure to need in the future ; with you it is so much old stock to be carried into next year's big ends on which, more than likely, a reduction will be expected because it is old. Better make the reduction now and let the other fellow do the carrying. Probably you have already sold enough blankets from the lot to afford a cut on the remainder to about cost and still make money, more than would be made in carrying the stuff over.

If the stock in hand is large it might pay to go into quite an elaborate campaign in order to close it out promptly; but do not fail to make it bring in customers and sell other goods. There need be no real loss in an occasional well-conducted at-cost or below cost sale. Take a lesson from the mail-order people, who always accompany each sale with an enticing descriptive circular of something else. Frequently their greatest profit is in the subsequent sales.

Get your blanket advertisement busy in the newspaper of your town, remembering that a moderate-sized advertisement containing one good honest reason that will interest the average horse owner is worth several times its space in meaningless type gymnastics. Make your advertisements talk and do not make them shout ; but make them talk blanket, not general hardware. Set the store window displaying blanket attractions. Make the whole affair as much a blanket gala day as though offering holiday goods before Christmas.

Hardware suggests that after the blanket sale is over, and there will be no more demand for them until another season, do not fail to gather up those that remain and store, carefully folded, in a tight, dry, mouse-proof and moth-proof chest that contains nothing else and will not be disturbed. Do not allow them to kick around in the way upon the counters half the Summer, or to lie in a tumbled heap in some dusty corner, as frequently is done to a greater or a less extent in many hardware stores. Even though the freshness of their appearance must be lost to some extent, there are few other things in the hardware store that require more considerate treatment or that, considering their nature, are more frequently made unsalable through careless handling.

BUSINESS CHANCE.

FOR SALE—Established profitable furnace, stove and tinware business in live growing manufacturing city in old Ontario; excellent stock, good stand with long lease; business growing rapidly (last year nearly $20,000); stock and tools about $5,000. Box 585, HARDWARE AND METAL, Toronto. [7]

There is Twenty Years of Experience in this Can

Doesn't this point the way for you? Stephen's Pure Paint has now a proven record of over twenty years' hard use, under many difficult conditions.

Every gallon is made with Manitoba Linseed Oil—properly aged—this increases not only the body, but also the wearing qualities of the paint.

Our extensive Advertising creates the demand Will you supply it in your territory?

MANITOBA HARDWARE AND METAL MARKETS

(Market quotations corrected by telegraph up to 12 a.m. Friday, Feb. 8, 1907.)

Room 511, Union Bank Building, Office of HARDWARE AND METAL, Winnipeg, Man.

Owing to snow blockades on the railways both mail and shipments of goods have been delayed. Dealers are complaining, especially those on the Canadian Northern, over which through trains between Edmonton and Winnipeg have not been running for three weeks. Conditions are equally bad in the Northwestern States. A combination of circumstances is making this winter a hard one for both settlers and merchants.

LANTERNS. — Quotations are as follows: Cold blast, per dozen, $6.50; coppered cold blast, per dozen, $8.50; cold blast dash, per dozen, $8.50.

WIRE.—Prices on barb wire for 1907 shew a sharp advance as compared with last year. Revised prices are as follows: Barbed wire, 100 lbs., $3.22½; plain galvanized, 6, 7 and 8, $3.70; No. 9, $3.25; No. 10, $3.70; No. 11, $3.80; No. 12, $3.45; No. 13, $3.55; No. 14, $4.00; No. 15, $4.25; No. 16, $4.40; plain twist, $3.45; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS — Lists and discounts are quoted as follows: No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c.. per pound. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Quoted now at $2.80 per keg.

CUT NAILS.—Recently advanced to $2.90 per keg.

PRESSED SPIKES — Prices are quoted as follows since the recent advance: ¼ x 5 and 6, $4.75; 5-6 x 5, 6 and 7, $4.40; ⅝ x 6, 7 and 8, $4.25; 7-16 x 7 and 9, $4.15; ½ x 8, 9, 10 and 12, $4.05; ⅝ x 10 and 12, $3.90. All other lengths 25c. extra net.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows: Bolts, carriage, ⅝ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅜ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½; hex nuts, case lots, 3, hex nuts, smaller lots, 2½ p.c.

RIVETS.—Prices on copper rivets have been increased and revised quotations are: Iron, discounts, 60 and 10 p.c.; copper, No. 7, 43c; No. 8, 43½c; No. 9, 45½c.; copper, No. 10, 47c.; copper, No. 12, 50½c.; assorted, No. 8, 44½c.. and No. 10, 48c.

COIL CHAIN.—Prices have been revised, the general effect being an advance. Quotations now are: ¼ inch $7.00; 5-16, $5.35; ⅜, $4.75; 7-16, $4.50; ½, $4.25; 9-16, $4.20; ⅝, $4.25; ¾, $4.10.

SHOVELS—List has advanced $1 per dozen on all spades, shovels and scoops.

HARVEST TOOLS — Discounts continue as before, 60 and 5 per cent.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES.—Quotations are: Bench axes, 40; broad axes, 25 p.c. dis. off list; Royal Oak, per dozen, $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $8.25; Columbian, $9.50; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.75; Copper King, $11 per dozen.

BUTTS—The discount on wrought iron butts is 65 and 5 p.c.

CHURNS — The discounts from list continue as before: 45 and 5 per cent.; but the list has been advanced and is now as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

SUPERB EMPIRE
The Perfect Cooker

We draw the attention of the Western Trade to the Superb Empire Planished Steel Range. The oven door is not only braced but also spring balanced. A lever is attached to the front key-plate to raise it as desired, and contrived also to hold it up if necessary. The Superb throughout is substantial, its nickel dress alone making it a ready seller, besides, it is made by a Western stove factory for Western people only.

IRON AND STEEL

"QUALITY UNSURPASSED"

SHEET ZINC — The price is now $8.50 for cask lots, and $9 for broken lots.

PIG LEAD.—The price is advancing and the range of quotations among Winnipeg houses makes it difficult to quote with exactitude. The average price is about $6.00.

AXLE GREASE—"Mica" axle grease is quoted at $2.75 per case, and "Diamond" at $1.60.

IRON PIPE AND FITTINGS— Revised prices are as follows:—Black pipe, ¼ inch, $2.65; ⅜, $2.80; ½, $3.50; ¾, $4.40; 1, $6.35; 1¼, $8.65; 1½, $10.40; 2, 13.85; 2½, $19.00; 3, $25.00. Galvanized iron pipe, ⅜ inch. $3.75; ½, $4.35; ¾, $5.65; 1, $8.10; 1¼, $11.00; 1½, $13.25; 2, inch, $17.65. Nipples, discounts 70 and 10 per cent.; Unions, couplings, bushings and plugs, 60 per cent.

LEAD PIPE—The price, $7.80, is firmly maintained in view of the advancing lead market.

GALVANIZED IRON—Quoted as follows:—Apollo, 16 gauge, $3.90; 18 and 20, $4.10; 22 and 24, $4.45; 26, $4.40; 28, $4.65, 30 gauge or 10¾ oz., $4.95; Queen's Head, 24, $4.50; 26, $4.65; 28, $5.00.

TIN PLATES—We now quote as follows: IC charcoal, 20 x 28, box, $9.50; IX charcoal, 20 x 28, $11.50; XXI charcoal, 20 x 28, $13.50.

TERNE PLATES—Quoted at $9.

CANADA PLATES—Quoted as follows: Canada plate, 18 x 21, 18 x 24, $3.40; 20 x 28, $3.65; full polished, $4.15.

BLACK SHEETS—Prices are: 10 to 16 gauge, 100 lbs., $3.50; 18 to 22, $3.75; 24, $3.90; 26, $4; 28, $4.10.

PETROLEUM AND GASOLINE.—Silver Star in brls. per gal., 20c.; Sunlight in brls, per gal., 21c.; per case, $2.30; Eocene in brls, per gal., 23c.; per case, $2.50; Pennoline in brls., per gal., 24c.; Crystal Spray, 23c.; Silver Light, 21c.; Engine gasoline in barrels, per gal., 28c., f.o.b. Winnipeg in cases, $2.75.

PAINTS, OILS AND TURPENTINE.—The trade are expecting another advance in turpentine. We quote: White lead, pure, $6.50 to $7.50, according to brand; bladder putty in barrels, 2½c.; in kegs, 3¾c.; turpentine, barrel lots, Winnipeg, $1.01; Calgary, $1.08; Lethbridge, $1.08; Edmonton, $1.09. Less than barrel lots 5c. per gallon advance. Linseed oil, raw, Winnipeg, 67c.; Calgary, 74c.; Lethbridge, 74c.; Edmonton, 75c.; boiled oil, 3c. per gal. advance on these prices.

WINDOW GLASS—We quote: 16-oz. O.G., single, in 50-ft. boxes—16 to 25 united inches, $2.25; 26 to 40, $2.40; 16-oz. O.G., single, in 100-ft. cases — 16 to 25 united inches, $4; 26 to 40, $4.52; 41 to 50, $4.75; 50 to 60, $5.25; 61 to 70, $5.75. 21-oz. C.S., double, in 100-ft. cases—26 to 40 united inches, $7.35; 41 to 50, $8.40; 51 to 60, $9.45; 61 to 70, $10.50; 71 to 80, $11.55; 81 to 85, $12.60; 86 to 90, $14.75; 91 to 95, $17.30.

STOVE MAKERS BANQUETED.

The employes of the Copp foundry at Fort William on Friday of last week were entertained to their annual banquet by Mr. and Mrs. H. Copp, served in the capacious showrooms of the firm.

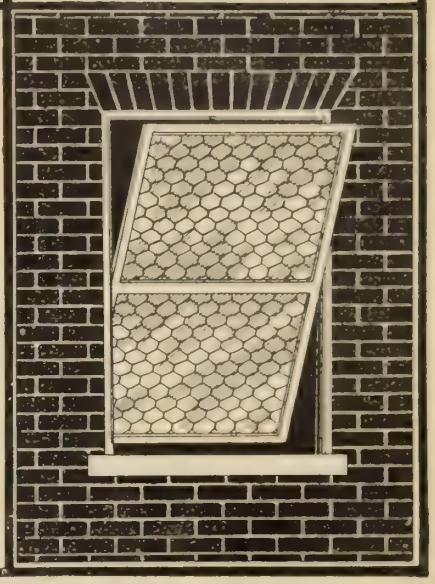
FIRE-PROOF GLASS WINDOWS THAT ARE FIRE-PROOF

These windows in a fire-proof building, complete the security, and in any building will thoroughly prevent the spread and advancement of the fiercest flames.

Better than iron shutters (even if they happened to be closed at the needed time); fire-proof glass remains intact, resisting both the intense heat of the fire and the action of water.

Many practical tests have proved it's efficiency.

Used in conjunction with our hollow sheet-metal frames and other fire-proof fittings, it gives the most perfect protection available.



It's adoption lessens insurance rates.

If you want to know more about "fire-proof windows," write us, it's an interesting subject.

Metallic Roofing Co., LIMITED,

TORONTO, Canada.

Western Canada Factory, 797 Notre Dame Ave., Winnipeg, Man.

SUIT FOR "RAKE-OFF" WITHDRAWN.

The suit brought by the Bennett and Wright Co. against W. J. Gage and Co., Toronto, to recover $9,613 for plumbing done in the latter firm's warehouse, has been finally settled, after hanging fire in the courts for over a year. Gage and Co. pay the plumbing firm $9,981, the increase of $300 including some other small accounts and interest. Mr. Gage preferred to settle the suit rather than fight it out in the courts, considering that the amount of the supposed "rake-off" was not worth the costs of the litigation.

NEW PAINT FACTORY.

The Standard Manufacturing Company, of St. John, Newfoundland, have just completed the construction and fitting up of their new building which is to be used as a paint factory. Part of the machinery for the production of both lead and liquid paint is now being installed. Experts have been engaged to carry on the manufacture of these commodities.

BUSINESS CHANCES.

HARDWARE business, established 32 years in town of 2700 population, no opposition; stock of about $4,000, consisting of hardware, paints and oils, tinware and graniteware, annual turn over $13,000 (for 1906), owners going into manufacturing; building owned by present owners, who will rent reasonably. FOUNDRY AND METAL INDUSTRIES

The Peterboro Steel Rolling Mills Company, Peterboro, are considering the erection of a new plant.

The C.P.R. will erect car shops at Cobourg, Ont., and will probably employ about 200 skilled hands.

Nathaniel Dyment, proprietor of the Dyment Foundry Company, Barrie, died at his home in Barrie this week.

The Northwest Brass Company, Winnipeg, Man., are erecting a new steel building, 100x80 feet, at a cost of about $20,000.

John E. Wilson, of St. John, N.B., will erect a large addition of 16x100 feet to his foundry, and will go extensively into the manufacture of stoves.

Archibald W. Dun, of Montreal, on leaving for Winnipeg to take charge of a branch establishment of the Canadian Westinghouse Company, was the recipient of a gold watch from his Montreal friends.

The Dominion Steel Company's Sydney rail mill in January broke the record for the greatest monthly production of steel rods. Their mill turned out 7,960 tons, the former record being 7,000 tons.

The moulding shop in connection with the business of the Wilson Scale Works, Toronto, was gutted by fire last Saturday afternoon. Valuable patterns of some machinery was destroyed. The loss, about $5,000, is covered by insurance.

Iron sheets coated with aluminum are now being manufactured in considerable quantities, and have been found to be very durable under long exposure. These aluminum-coated sheets will probably supplant galvanized iron for many purposes.

The main building of the new plant which Jenkins Bros., New York, valve manufacturers, are erecting in Montreal, will be 200x50 feet. There will also be a foundry 150x64 feet, and an engine and boiler room 60x45 feet. Later, the company expects to build a foundry 100x60 feet.

PROTECTING CUTLERY MARKS.

A decided effort is being made in Sheffield to prevent the marking of foreign made cutlery in such a way as will convey the impression that it is of the Sheffield manufacture. The plan under consideration is to so mark the Sheffield-made goods as will distinguish the genuine from the imitation, but it is pointed out by authorities in England that it would be very difficult to discover any mark which would show conclusively that the goods had been made in England, and would still be out of reach of infringers or imitators. The manufacturers of cutlery in Sheffield are facing a marked advance of certain raw materials which may affect seriously the price at which the finished article can be placed upon the market. Celluloid has advanced about 10 per cent., and even more serious than this is the recent advances in the price of ivory. Within a short time past this material has advanced £12 per hundredweight in price. For a number of years past the Sheffield buyers who have attended the ivory auction sales have declined to bid because they could not afford the prices paid for ivory by American manufacturers of piano keys, who were apparently in need of all the stock that was offered. It is said, on good authority, that in the past three months Sheffield has cut up for use the smallest amount of ivory ever before used.

THE selection of flax seed is of first importance in the manufacture of pure linseed oil. Without the best seed the highest quality oil cannot be made. We buy the choicest No. 1 Manitoba seed, cleaned, and reclean it to make absolutely sure that no foreign substances remain. This choice flax seed and our exclusive "screw press process" of manufacture produces a much superior quality of *pure* linseed oil. We are now making linseed oils for our own uses and the trade, and shall be glad to give you prices and detailed information about

LAST YEAR'S METAL PRODUCTION

In its issue of January 5th the Engineering and Mining Journal publishes the statistics of the production of the principal metals and mineral substances in 1906, the figures for 1905 being given in comparison. The year which has closed was one of great prosperity in the mining districts, and in most branches of mineral and metal production. The production of gold in the world is estimated at $404,649,685, against $379,867,373 in 1905. The production of copper in North America (including the United States, Canada and Mexico) was 1,097,300,000 lbs., in 1906, against 1,063,582,700 lbs. in 1905. Most of these statistics are based on direct reports from the producers.

PROMPT PAY.

Settle on the day. Your reputation for meeting your obligations promptly is your best asset. Every day does something toward making or unmaking your reputation as a business man, says the Hardware Trade.

When your bills come due and you assume it is not necessary for you to make the proper arrangements with the wholesaler, letting that slide by the day of payment, you have registered with the wholesaler, and with any others whom he may give the information to, the fact that you are "unsatisfactory" pay. Never take anything for granted when a business reputation is at stake.

Do business on business principles. When obligations are due, they are due. Many merchants do not need to be told this. Many retailers who have not yet become very good merchants fail to realize these truths.

LETTER BOX.

P. S. Stewart & Son, Renfrew, asks for the name of the manufacturer of the "Winnipeg" Hockey Skates.

Ans.- We believe that J. K. McCullough & Co., Winnipeg, are the manufacturers. If not, can any reader supply the correct address?—Editor.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

An opera house will be erected at New Liskeard, Ont.

A market building will be erected at Berlin, Ont., at a cost of about $20,000.

Plans are being prepared for the erection of a new hotel at Kingston to cost $120,000.

An up-to-date hotel building is going to be erected at Woodstock at the cost of $60,000.

The Metallic Roofing Company, of Toronto, will enlarge their factory on King and Dufferin streets.

The Ottawa Steel Casting Company have applied for an increase of $100,000 to their capital stock, making it $350,000.

A new skating rink will be erected at Ottawa to replace the one destroyed by fire a week ago. The new rink will cost about $75,000.

Plans have been completed for a handsome new three-storey building to be erected by the Oddfellows of Strathcona, Alberta.

A new theatre will be erected on Richmond street, Toronto, at a cost of about $75,000. The promoters include Rust and Weber of New York city.

The Meisel shops at Port Arthur will be erected almost entirely of glass. Preparations are being made for rushing the construction work in the spring.

Negotiations are being carried on for the establishment of a match factory in Lindsay. J. D. Mantion, formerly of Hull, Que., is promoter of the industry.

The National Car Company, Halifax, N.S., recently incorporated with a capital of $1,000,000 intend erecting a plant for the construction of from 15 to 25 cars per day.

A new company has been incorporated with a capital of $100,000, to be known as The Plimley Automobile Company, and will erect a new brick garage at Victoria, B.C.

Plans are now ready for the new dam and bridge at Buckhorn, on the Trent Canal. Tenders will be called in a short time, and it is estimated that the work will cost about $35,000.

Building permits to the value of $750,000 have been issued in Toronto for January as against $450,000 during January last year.

The Canadian-Mexican Pacific Steamship service will carry samples of general merchandise free of charge to the various ports touched by them in order to show what Canada and Mexico have to offer each other.

A new grain elevator with a capacity of about 10,000,000 bushels will be erected at Port Arthur for the Grand Trunk Pacific Railway. The contract has been awarded to Barnett and Mcueen of Port Arthur.

The Standard Glass Company has been incorporated with a share capital of $40,000, for the purpose of manufacturing glass and glassware. The head office is to be in Toronto, the provisional directors being : J. Hurst, W. Hand, W. Jeffery and W. F. Oliver, of Toronto.

The Gamer Manufacturing Company has been incorporated with a share capital of $50,000 for the purpose of manufacturing bedsteads, etc. The head office will be at Chesley, the directors being : Arthur Gamer, Ada Gamer, A. Harrod, T. E. Devitt and F. Gillon of Weston, Ont.

The Wingold Stove Company has been incorporated with a capital stock of $40,000, for the purpose of manufacturing stoves, ranges, furnaces, etc. The head office will be at Winnipeg, the directors being : F. B. Blanchard, O. Gensmer, R. Kellow, L. Blanchard and I. A. Mackay, of Winnipeg.

The Kelly Island Lime Company has been incoeporated with a share capital of $40,000 for the purpose of manufacturing lime, mortar, cement, sewer pipe, etc. The head office will be in Windsor, the provisional directors being : A. R. Bartlet, N. A. Bartlet and A. W. MacGregor of Windsor.

Love Brothers, has been incoruorated with a share capital of $150,000 for the purpose of manufacturing building materials and supplies. The head office will be at Toronto, the provisional directors being : P. Love, H. W. Love, E. G. Long, F. Orford, W. J. Coulter, and E. J. Barton of Toronto.

The Eastern Construction Company has been incorporated with a share capital of $1,000,000, for the purpose of manufacturing machinery for construction purposes. The head office will be at Ottawa, the directors being : J. Gillespie, H. H. Short, F. H. Honeywell, S. B. Johnston and J. B. Prendergast of Ottawa.

The M. McKenzie Company has been incorporated with a capital stock of $75,000 for the purpose of manufacturing mill, marine, railway and contractors' supplies. The head office will be in Montreal, the directors being : U. D. Hamilton, A. A. Lunan, A. Dunn and L. Lahaye of Montreal, and Alex. Lunan of Huntingdon, Que.

The Crescent Machine Company has been incorporated with a share capital of $20,000 for the purpose of manufacturing machinery, implements, rolling stock and hardware. The head office will be at Montreal, the directors being : C. M. Gardiner, C. D. Drabble, W. A. Patterson. H. S. Williams and W. Bovey, of Montreal.

A new building will be erected in Regina for stock show purposes. The new building will be 144 feet by 101 feet, to be used as a show and sale ring and for stabling accommodation.

In the centre will be a show ring 80 x 39 feet, and surrounding the arena is seating accommodation for over 2,000. The building will cost in the neighborhood of $15,000.

A school building will be erected at Cobalt at the cost of about $8,000.

A new hotel will be erected at Kenora, Ont., at the cost of $100,000.

The Canadian Pacific Railway Company have purchased a site for their new ticket office in Montreal, the city freight office, a local telegraph office, and other offices of the railway company. The Dominion Express Company have secured room in part of the building. The price of the property was a little over half a million dollars.

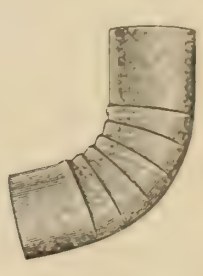
Cameron & Company has been incorporated with a share capital of $100,000 for the purpose of manufacturing furniture, doors, sash, pulp, turpentine, wood alcohol, etc. The head office will be at Ottawa, the provisional directors being: U. A. Cameron, R. G. Cameron, G. C. Edwards, G. Cameron of Ottawa, J. H. Gates of Burlington, and Hugh McLean of Buffalo, N.Y.

The Consolidated Bicycle and Motor Company, Winnipeg, Man., has been incorporated, with a capital of $60,000, for the purpose of manufacturing bicycles, motor cars, boats, pumps, etc. The head office will be at Winnipeg, provisional directors being C. T. Cruikshank, J. A. Hudson and J. S. St. Mars, all of Winnipeg.

To spend nearly half a million dollars during the present year in building some sixty new school rooms to relieve the overcrowding, and to erect a big building at the corner of York and Richmond streets, to serve as Board of Education offices, board rooms and store rooms, and to make extensive improvements and enlargements is the policy of the Property Committee of the Board of Education, Toronto.

GOODS OUT OF STOCK.

In a recent interview on the treatment of customers by the retailer of sporting goods, a writer in the Sportings Goods Dealer has the following to say: "No doubt in common with a great many others I am often asked for articles which I do not have in stock, and I claim that my acquaintance with this industry is as large as that of most retailers. Under these circumstances the best course to pursue with customers, is a question which naturally suggests itself. Peronally, I frankly state at the outset that I do not hold the particular line required, but suggest that I have a very similar article which should answer just as well. Mind, I do not force this substitute on my customer, or say that it is better than the article required. This, in my opinion, is by no means advisable, and, in fact, according to the letter of law, comes very nearly within the definition of substitution. However, there can be no possible objection taken to pointing out that one has an equally good line in stock, and more often than not a sale will result. If, however, my customer is particularly set on obtaining a certain article, it is always polite to offer to procure it for him, even if the resulting sale does not provide a very large profit, or if it involves some considerable trouble to obtain. The dealer has at least prevented the customer from applying at some other establishment, and has created a good effect by his evident anxiety to please the client. If I am not acquainted with the maker of the particular line desired, I usually drop a note to my trade paper, and in nine cases out of ten the paper furnishes me with the information and puts me in the proper channel for obtaining a supply. There is some information, however, with regard to certain lines, which even the editorial knowledge can not supply, and this fact leads me to consider seriously whether such a line is worth the retailers attention at all. In my opinion, unless a trader is unable to learn or is not familiarized by advertisements with all particulars of any really sound line, he is quite justified in refusing to handle it. This may seem a somewhat sweeping assertion, but it must be borne in mind that if a firm have sufficient confidence in the merits of their goods, they are always willing to go to some expense to notify the trade of its particular advantages."



NO THINKING HERE.

A prominent business man told me recently that his great weakness was his inability to stop thinking after retiring, writes O. S. Marden in Success. In this way he is robbed of so much sleep that he feels all used up the next day.

I advised him to cultivate the habit of closing the door of his business brain at the same time that he closed the door of his business office. "You should," I said, "insist on changing the current of your thoughts when you leave your business for the day just as you change your environment or as you change your dress for dinner when you go home in the evening. Turn your thoughts to your wife and children, to their joys and cares; talk to them; play games with them; read sume humorous or entertaining story, or some strong, interesting book that will lift you, in spite of yourself, out of your business rut. Go out for a long walk or a ride; fill your lungs with strong, sweet, fresh air; look about you and observe the beauties of nature, or have a hobby of some kind to which you can turn for recreation and refreshment when you quit your regular business. Be master of your mind; learn to control it instead of allowing it to control you and tyrannize over you.

Hang up in your bed chamber, in a conspicuous place, where you can always see it, a card bearing in bold illuminated characters this motto: NO THINKING HERE.

There is no short, easy road to success.

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that your notice is for the trade, a copy of these newspapers of trade printed matter will be sent by the firms whose addresses are given.

Artistic Pastel.

James Smart, manufacturers of hardware and tools, stoves, ranges and furnaces, Brockville and Winnipeg, are sending to their customers a handsome calendar in the shape of a pastel, tinted in gold, it making a very beautiful ornament for the office or shop.

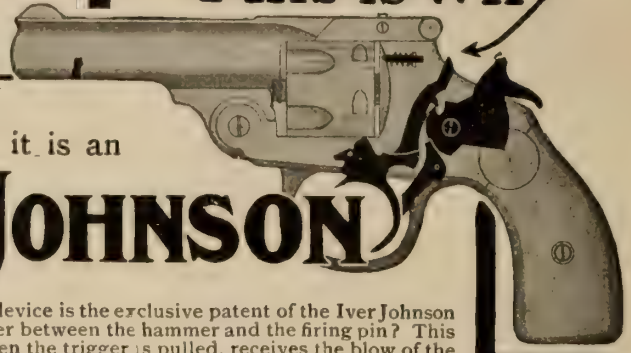
Money Saving Oil Tanks.

A small booklet issued by S. F. Bowser & Company, Toronto, entitled, "How to Retail Gasoline," should prove very interesting to hardware merchants who handle gasoline. By installing the Bowser long distance outfit, loss can be turned into profit besides doing away with any possible danger of explosion or fire. Any merchant who has not yet received the booklet should write for one, mentioning this paper.

Atkins' Anniversary Souvenir.

E. C. Atkins & Co., Indianapolis and Toronto, manufacturers of Atkins Saws, have issued a handsome book in commemoration of their fiftieth anniversary, entitled "The Saw, its Ancient and Modern Development." The binding is a clever imitation of a piece of sawed timber, while the grain of the wood correctly brought out, while high grade paper, cuts, type and artistic arrangement combine to make the production harmonious and effective in a high degree.

A very interesting sketch of the world's industrial development leading up to the invention of the circular saw, is given, followed by a sketch of the ancestry, youth and business experience of E. C. Atkins, founder of the company. This introduces a history of the company, with brief sketches of the men who have been active in its management and are now directing its affairs. Some description of the present plant is accompanied by numerous handsome illustrations, while the concluding pages of portraits show the company's appreciation of its efficient clerical, mechanical and selling staff.



The company is to be congratulated on their half century of progress, as well as on the beauty and good taste of its souvenir. We do not know how generally the Atkins company can distribute their souvenir book, but any dealer who secures a copy is bound to value it as a decided acquisition to his library.

Rolling Mills Price List.

The price list of bolts, nuts, hinges, etc., manufactured by John White, London Bolt and Hinge Works, London, Ont., also containing prices of bar iron and steel washers, etc., manufactured by the London Rolling Mills Company, has been sent to the trade, and should prove very handy to hardware merchants, as the number of various bolts, in 100 lbs. is given, as well as cuts of various styles of nuts, hinges, screw hooks for various purposes, harrow teeth, etc. The last ten pages contain quotations of the London Rolling Mill Company's product of iron and steel bars and bands, sleigh, shoe steel, and washers, and is particularly valuable.

Accidental Discharge Impossible—

This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. That's why you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer never touches the firing pin. An Iver Johnson never fails when you pull the trigger and never "goes off" when you don't.

Iver Johnson Safety Automatic

Prices—Hammer $6.50, Hammerless $7.50.

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply

Please send for descriptive catalogue, free upon request. It tells all about it.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

Imperial Varnish Catalogue.

The trade sales catalogue, No. 10 of the Imperial Varnish and Color Company of Toronto, has been sent out to the trade, containing illustrations of the many lines manufactured by them. Suggestions of numerous methods for increasing the sale of this paint are also supplied.

Carriage Castings.

Catalogue No. 7 of malleable iron goods manufactured by P. Kyle, Merrickville, Ont., has been issued, it containing views and sizes of carriage and wagon castings, such as whiffletree hooks, centre irons, clevises, plates, couplings, bolster plates, neck yoke tips, wear irons, step pads, etc., hame trimmings, and various tools and fittings for agricultural work. Any merchant not receiving this catalogue should write for a copy, mentioning this paper. The many illustrations will be found of great value in ordering goods.

Marlin's New Catalogue Ready.

A handsome hanger in colors is being distributed by the Marlin Fire Arms Company, New Haven, Conn. It is really an announcement of the new catalogue of this firm, for across the top of the hanger are the words, "New Catalogue Now Ready." The hanger is very pretty and will ornament the walls of the store or the show window. The new catalogue is also a handsome trade publication and will be interesting to all dealers in firearms. Mention this paper.

HOW GERMANS ENCOURAGE CASH.

In the German town of Glauchau a novel plan has been adopted by merchants for the encouragement of cash payments. The plan is to give coupons for cash sales and where purchases aggregate 110 marks the customer is entitled to 5 marks or 4½% on his purchases. The method of carrying it out is German. An association of relatives has been formed and each pays an entrance fee of 50 marks (23.8 cents.) The local bank handles the funds and redeems the coupons. To enable it to do that the merchants buy the coupons from the bank, and to cover expenses pay a little more than the redemption of the stamps call for. The bank's renumeration is the handling of the funds. The association's surplus amounting this year to 500 marks, is distributed as prizes is amounts of 5 marks each to the persons whose names appear on the redeemed books first drawn at random from the files of the current year.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (as $1,000) are allowed as one word.

Cash remittances to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

Where replies come to our care to be forwarded, five cents must be added to cost to cover postage, etc.

Paint, Oil and Brush Trades

THE LURE OF THE WEST.

Still another of the Canada Paint Company's staff has been called to their coast works in Manitoba. A few days ago Robert Bremner, jr., received orders to proceed to Winnipeg, and, as he is a universal favorite, the opportunity was seized upon to make him a little presentation. This took the form of a neat chamois purse generously lined with some golden beauties. On behalf of the staff, Mr. Robert Munro, the managing director of the company, made the presentation and, in wishing Mr. Bremner farewell, alluded to the corp d'esprit and bond of harmony which existed between the staff generally and the various branches in Montreal, Toronto and Winnipeg.

On Thursday last at the Canadian Pacific Railway station in Montreal a large crowd also assembled to say "good-bye" to Mr. Bremner. In addition to a strong contingent from the Canada Paint Company's works there was a good assemblage of old chums, aunties, sisters and cousins (Bob, like a true Irishman, counts his cousins by the dozens.) As the train pulled out there was hand-shaking, cheers, and not a few tears, one old Salt bound for Esquimalt, remarking as the lachrymal flow came in a perceptible stream: "Vast heaving there—Belay making Eye (high) water on the poop deck or you'll soon have a bloomin' skiting rink!" The night was cold but the send-off was warm. Success to Mr. Bremner, jr., in the Prairie City.

TURPENTINE VS. BENZINE.

Now that turpentine has reached such high prices and become so scarce, benzine is being largely used as a substitute. For thinning paint deodorized benzine replaces spirits of turpentine to a great extent in the manufacture of low priced varnishes and ready mixed paints, and almost to the exclusion of turpentine by manufacturers of agricultural implements, farm wagons and shade cloth. Wherever a low priced solient or volatile article is desired, it finds a ready market. And wherever it is simply necessary to cover a surface with paint, that is to dry rapidly, afterwards to be protected by varnish, it serves the purpose, because of its rapid and complete evaporation. While it is a more reliable thinner for paint than fatty or adulturated turpentine, it can by no means replace turpentine, as it leaves oil paints on drying, more porous and less binding, and cannot be employed with satisfaction by the coach painter, or decorator for interior work.

Try it for yourself by mixing color fairly strong with oil and drier, then thin one half of the paint with turpentine, and the other half with the same measure of benzine, apply the two mixtures side by side, on an old painted board, and expose the board for a week or so and see what happens.

RAW AND BOILED OIL.

For some purposes raw oil is preferable to boiled. The raw oil does not harden as quickly as the boiled, consequently is more in evidence for outside work. In speaking on the subject of oils, an old veteran of the brush, quoted by an exchange, said:

"Raw linseed oil generally finds most favor. It is clear, works freely, and in white lead paint on outside work requires the addition of little driers. It allows the paint to cover well, and is durable. Mixed in raw oil a paint dries with a glossy surface, which is a factor of durability. Boiled oil, on the other hand, is for white lead paints, less satisfactory than raw. Though a paint mixed with it may go further, it does not cover so well, is apt to discolor light tints, is harder to spread, less durable, and a constant source of blistering. Where the use of boiled oil comes in is in mixing dark colors for outside work, such as Brunswick green, Indian red, bronze green and such colors obtained by a painter in a dry state. The comparatively thick condition of boiled oil assures a better gloss under these circumstances, and assures their drying under ordinary conditions without the addition of dryers."

WOOD STAIN INSTRUCTOR.

S. C. Johnstone and Son, of Racine, Wis., have recently published an extremely interesting and instructive handbook upon their specialty. It furnishes valuable information regarding the different kinds of wood—hard, medium and soft—and the best methods to follow in order to preserve and bring out the full beauty of grain and texture.

The different varieties of each wood are dealt with separately, and full instructions are given of the methods used for obtaining all the various effects which are now so much in demand. While the book advertises more especially the materials manufactured by this firm, it contains a vast amount of information which will greatly aid hardware merchants in intelligently selling stains, varnishes, etc. It is well illustrated and well printed, and will be well received by hardware merchants.

Floorglaze Enamel

BRANDRAM BROS. & CO. BRANDRAM'S B. B. WHITE LEAD MANUFACTURERS LONDON ENGLAND

An Important Announcement regarding "Anchor" and "English" Liquid House Paints.

FOR some time we have been supplying the trade with Paints put up under both brands, but for various reasons we find it advisable to sell hereafter only **"ENGLISH" LIQUID HOUSE PAINTS**. The two brands were identical in quality, the only White Lead used in their manufacture being Brandram's B. B. Genuine White Lead, the world's standard for close on to two centuries. So when we sell you **"ENGLISH" LIQUID HOUSE PAINTS** in place of "ANCHOR," you will know that you are getting the same Paints as you ordered under "ANCHOR," and we would ask you to get into the way of specifying **"ENGLISH"** in your orders in place of "ANCHOR." We would also ask you to tell your customers that "**ANCHOR**" Liquid **House** Paints are now called "**ENGLISH**," and so assist us to familiarize consumers with the name "**ENGLISH**" as the name of the leading brand of **LIQUID HOUSE PAINTS**.

We maintain the "**ANCHOR**" trade mark on all our other Specialties.

Paint and Oil Markets

MONTREAL.

Office of Hardware and Metal,
232 McGill Street,
Montreal, February 8, 1907

There is nothing very startling to report in the markets this week.

Turpentine is reported to be very firm with higher prices at the stills, and it is thought that much inclement weather is put up with at the pine woods, figures may soar even five or ten cents per gallon. Local figures, however, have not been changed, but an advance may be recorded at any moment.

With the exception of Paris green, which is now being in fair quantities, with orders marked for February delivery, there is no special rush in the paint and oil department.

In view of a sharp advance in damar gum, all damar varnishes have been advanced about 50 cents per gallon. Varnish and Japans generally, owing to the higher price of turpentine, are being firmly held.

LINSEED OIL—Still remains at the same prices. We quote: Raw, 1 to 4 barrels, 55c; 5 to 9 barrels, 54c; boiled, 1 to 4 barrels, 58c; 5 to 9 barrels, 57c.

TURPENTINE—(In barrels). Higher prices prevail at the stills, and if much inclement weather is met with at the pine woods, prices are likely to advance 5 or 10c per gallon. Our prices are: Single barrel, 98c per gal.; for smaller quantities than barrels, 5c extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

GROUND WHITE LEAD—Our prices remain: Best brands Government Standard, $7.25 to $7.50; No. 1, $6.90 to $7.15; No. 2. $6.55 to $6.90; No. 3, $6.30 to $6.55, all f.o.b., Montreal.

DRY WHITE ZINC—Still firm. We quote: V.M. Red Seal, 7½c to 8c; Red Seal, 7c to 8c; French V.M., 6c to 7c; Lehigh, 5c to 6c.

WHITE ZINC—Our quotations are: Pure, 8½c. to 9½c.; No. 1, 7c. to 8c.; No. 2, 5¾c. to 6¾c.

PUTTY.—Our prices are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladder putty in barrels, $1.75.

ORANGE MINERAL—The following prices still hold: Casks, 8c; 100 lb. kegs, 8½c.

RED LEAD—The following quotations are firm: Genuine red lead in casks, $6.00; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs $6, and smaller quantities, $6.75.

PARIS GREEN—We continue to quote: In barrels, about 600 lbs., 23½c per lb.; in arsenic kegs, 250 lbs., 23½c.; in 50 lb. drums, 24c.; in 25 lb. drums, 24½c.; in 1 lb. packets, 100 lbs. in case, 25c.; in 1 lb packets, 50 lbs in case, 25½c.; in ½ lb. packets, 100 lbs in case, 27c.; in 1 lb. tins, 26c. f.o.b. Montreal. Term three months net or 2 per cent. 30 days.

SHELLAC—Prices remain: Bleached in bars or ground, 46c. per lb., f.o.b. Eastern Canadian points; bone dry, 57c per lb., f.o.b. Eastern Canadian points; T. N. orange, etc., 48c per lb. f.o.b. New York.

SHELLAC VARNISH—Very firm. We still quote: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—No change in prices. We still quote: $1.20 to $1.50 per gallon.

PETROLEUM—(In barrels) Our prices are: American prime white coal, 15½c. per gallon. American water, 17c. per gallon; Pratt's Astral, 19½c. per gallon.

WINDOW GLASS—Prices remain firm. We still quote: First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.20; second break, 100 feet, $3.40; third break, 100 feet, $3.95; fourth break, 100 feet, $4.15; fifth break, 100 feet, $4.40; sixth break, 100 feet, $4.95. Diamond Star: First break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second break, $4.80; third break, 100 feet, $5.75; fourth break, 100 feet, $6.50; fifth break, 100 feet, $7.50; sixth break, 100 feet, $7.50; seventh break, 100 feet, $8; eight break, 100 feet, $9. Double Diamond: First break, 50 feet, $3.45; second break, 50 feet, $3.75; first break, 100 feet, $6.75; second break, 100 feet, $7.25; third break, 100 feet, $8.75; fourth break, 100 feet, $10; fifth break, 100 feet, $11.50; sixth break, 100 feet, $12.50; seventh break, 100 feet, $14; eighth break, 100 feet, $16.50; ninth break, 100 feet, $18; tenth break, 100 feet, $20; eleventh break, 100 feet, $24; twelfth break, 100 feet, $28.50. Discount on Diamond Star, 20 per cent.; on Double Diamond, 40 per cent.

TORONTO.

Office of Hardware and Metal,
10 Front Street East.
Toronto, February 8, 1907

The paint trade still continues very brisk, with large orders being received for future shipment.

Very few advances are quoted this week, the principal one being on damar, which has advanced 50c. per gallon. Clear damar is now quoted at $2.80, and No. 1 at $2.50 per gallon. This will have a tendency to cause further advances on varnishes. Bluestone has also advanced, owing partly to the large quantities required for the manufacture of paris green.

White lead is in good demand and large orders are being booked for present shipment. No advance is quoted

RAMSAY'S PAINTS

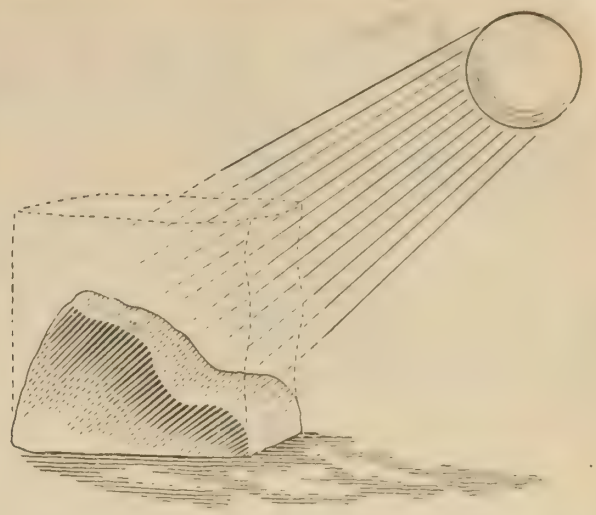
In every talk with a customer about paints there must be behind it a stock that stands for quality and satisfaction. A paint must be made right to sell right—made to withstand the storms of rain and snow, as well as burning sun. With Ramsay Paints goes a guarantee of satisfaction. The Ramsay Paints have been made in Canada since 1842—made for Canadian weather—made properly. They are not dear paints. They are not cheap paints. The price is right for proper selling of the right paint. The quality of the Ramsay Paints remains long after the price is forgotten.

Let us tell you all about it.

A. RAMSAY & SON COMPANY

Est. 1842 MONTREAL PAINT MAKERS

Just try some ordinary green paint on a panel of wood, see how hard it works,—don't cover, lacks body. Then try on another panel



LUCAS IMPERIAL FRENCH GREEN

notice how easy it spreads, how well it covers,—that's body. Makes the cost less for this reason alone, and stays fresh and brilliant. It preserves the wood, keeps the weather out and the color in. It is the **ONE** Green that is free from arsenic or verdigris.

BEWARE OF IMITATIONS

JOHN LUCAS & CO.

PAINT CO.
LIMITED
MANUFACTURERS
MONTREAL·TORONTO
·WINNIPEG

this week but merchants are ordering in large quantities, in view of a further advance, which seems certain to take place in the near future.

Turpentine remains at last week's prices, but is much firmer in Europe and Savannah. No change is made in raw or boiled oil, very little ordering being done for either oils or turps at present. No let-up is reported in the sale of paris green, book orders being received daily for this article, which has practically no substitute.

WHITE LEAD—Ex Toronto pure white, $7.40; No. 1, $6.65; No. 2, $6.25; No. 3, $5.90; No. 4, $5.65 in packages of 25 pounds and upwards; 1-2c per pound extra will be charged for 12 1-2 pound packages; genuine dry white lead in casks, $7.00.

RED LEAD—Genuine in casks of 500 lbs., $6.00; ditto, in kegs of 100 lbs., $6.50; No. 1 in casks of 500 lbs., $5.75; ditto, in kegs of 100 lbs., $6.25.

DRY WHITE ZINC.—In casks, 7 ½c.; in 100 lbs., 8c., No. 1, in casks 6½c. in 100 lbs., 7c. (Ground in oil)—In 25 lb. irons, 8c.; in 12½ lbs., 8½c.

SHELLAC VARNISH—Pure orange in barrels, $2.70; white, $2.82 1-2 per barrel; No. 1 (orange) $2.50; gum shellac, bone dry, 63c., Toronto. T. N. (orange) 51c. net Toronto.

LINSEED OIL.—Very little is being sold at present, with no advances quoted for this week. Prices remain at: Raw, 1 to 3 barrels, 58c.; 4 to 7 barrels, 57c.; 8 and over, 56c, add 3c. to this price for boiled oil. Toronto, Hamilton, London and Guelph net 30 days.

TURPENTINE.—The markets at Savannah, and Europe are very firm. The demand for the season's supply of turps has not started as yet. We still quote: Single barrels, $1.02 per gallon f.o.b. point of shipment, net 30 days. Less than barrels, $1.07 per gallon.

PARIS GREEN.—The demand remains extra good, in view of the further advances expected. Merchants are remembering their difficulties in securing second supplies last year, even at the advanced price. We now quote base price per lb. on Canadian 26½c., and English 26¾c., f.o.b. Toronto.

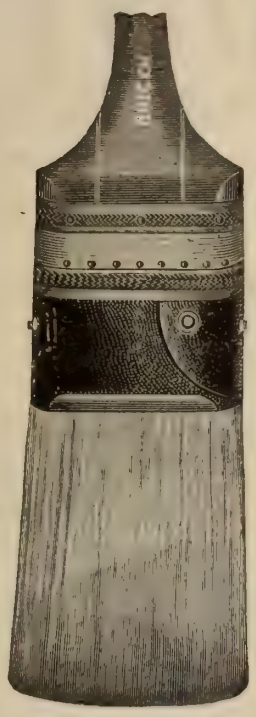
PETROLEUM—For refined we still quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex. warehouse. On crude the prices are: Canadian, $1.32; Pennsylvania, $1.58; Ohio, 96c.

For additional quotations see current prices at back of paper.

PAINT COMPANY MOVES.

Benjamin Moore & Company, formerly the Francis Frost Company, have removed from their old factory on Queen street east, Toronto, to their fine new $30,000 factory building at the corner of Cawthra and Grove avenues, Toronto Junction, and in future all mail should be sent to the new address. The new factory is 50 x 150 feet, and has three stories and basement, with room for further expansion as the demand for Muresco wall finish and Ark brand paint makes necessary further enlargements.

CARE OF BRUSHES.



One conspicuously famous brush maker has declared the art of brush making to be "an art preservative." The practical carriage and wagon painter is deeply concerned in the achievements of that art, because every distinct advancement made therein makes possible an equally distinct advancement in the art of painting. To a greater extent, perhaps, than any other class of painters, the carriage and wagon painter should be interested in making up his brush equipment of tools of the best quality.

The brush made of reliable stock, having the proper "hand" and point, and which balances like a "thoroughbred," is an excellent tool to buy, regardless of the price. The vehicle painter requires a brush made scientifically, by the outlay of honest workmanship, and of material that is wholly above suspicion. A brush that has simply the price to recommend it is usually an unreliable article and worketh evil, like a thief in the night, unexpectedly. In making choice of a brush for putting on priming, lead, and roughstuff, and for such other features of general use as requires a round or oval bristle brush, the painter may properly look at the filling of the tool. Deception, if practised at all, is usually placed where it shows least.

The first-class brush is distinctively the brush that shows quality—uniform quality—from centre to outside, says the Painter and Decorator. Other things being equal, the brush that is made up uniformly as to its bristle equipment will develop a good point, and all carriage painters are alive to the importance of this virtue in both paint and varnish brushes. Much of the usefulness of a brush depends upon the manner of caring for it when it comes into the paint shop. The bristle brushes used for priming, lead, and roughstuff require bridling until worn down somewhat.

There are many patent brush bridles now procurable at a nominal cost which tend to give a brush better shape than the shop-made bridle. If these are not at hand, the painter can take "tufting cord" (our friends the carriage trimmers keep it) and wind the brush securely, but not too tightly; or he can take a piece of lightweight rubber cloth and, extending the piece well down to the handle, tie it at the proper distance around the bristles, the rubber side of the piece should be fastened next the bristles. Then from where it is tied around the bristles, fold the piece back into the handle and tie securely. Trim off, and a bridle is furnished that is perfectly water and paint-proof, the cloth sides of the rubber being folded inside. For a shop-made bridle this will be found very serviceable. After bridling drop a little oil paint into the heel of the brush and set it away in a dust-proof compartment for a few days.

Construction work on the blast furnace plant at Port Arthur is now completed, and the date of blowing-in depends on the arrival of ore from the Atikokan mines.

Every Jobber in Canada

knows that the name "**Boeckh**" on his **Brushes, Brooms** and **Wooden Ware** is a guarantee that in these lines nothing can be bought "just as good." For over **50 years** the trade of Canada has looked to **Boeckh** for what was **Best**,—it is looking to-day—and getting it.

The consumer is more critical to-day than ever — that "**Boeckh's**" name on what he buys brings no complaint to the dealer is your strongest argument for insisting upon getting Boeckh's Brands. **Will You?**

RETURN TUBULAR BOILERS FOR LOW PRESSURE STEAM HEATING

By W. B. McKay, Toronto.

It is not the object of this article to discuss the relative merits of the return tubular and the many makes of both steel and cast sectional boilers, but rather to set forth such information in as clear and as succinct manner as possible, as may be useful to heating engineers, architects and contractors when the use of such boilers is required.

One point necessary to the successful installation of a steam heating plant is to have ample boiler power, and it is for this reason that a careful examination of the table in fig. 1 will enable you to specify the proper size for any requirements. The data in table fig. 1 was collected from the actual practice of to-day, and is standard for Canada. Throughout the United States a slight modification of this same type of boiler is used, the difference being that the head is set back in to make a smoke chamber on the front end of the boiler. There is no advantage in doing this, and, in fact, some boiler men consider it a disadvantage, as it leaves a dry end of the plates exposed to the hot gases. We need only devote our time, however, to the first-mentioned of these types as this is the one most used in low pressure heating to-day, throughout Canada—the type we are most interested in. The information in the table is laid down in columns under specific headings, thus enabling us to dwell on each, briefly, and more to the point.

Boiler Horse Power.

The term "Horse power" in column 1 of the table, is really only the builder's rating of the boiler, calculated on a basis of the heating surface tabulated in column 2. It will be seen that, approximately, fifteen square feet of heating surface in this table is equivalent to a boiler horse power. The reason of this will be observed from the following remarks in detail. First of all, it must be understood what constitutes a boiler horse power and what is figured upon as being heating surface in a boiler of this type.

A boiler horse power, corectly speaking, is not a unit of so many square feet of heating surface (heating surface being a variable quantity, horse power,

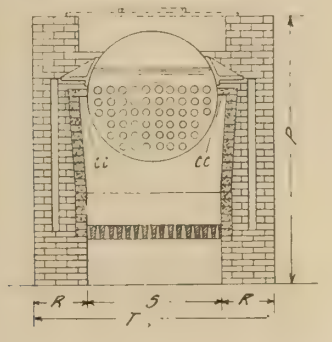

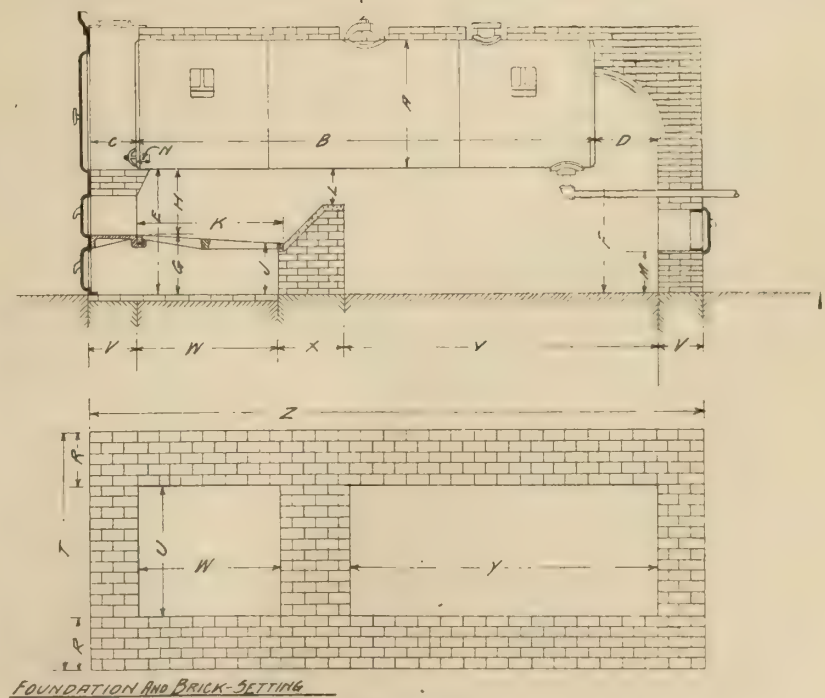

Fig. 2

FOUNDATION AND BRICK-SETTING
STANDARD RETURN TUBULAR BOILERS
FOR LOW PRESSURE STEAM HEATING

then, would also vary), but is the evaporation of thirty pounds of water at a temperature of 100 degrees (Fahr.) feeding into the boiler, into steam at 70 pounds per square inch, gauge pressure, its equivalent being the evaporation of 34.5 pounds from water at 212 degrees into steam at 212 degrees, or 0 pounds pressure, and the heating surface referred to here and in column 2 of the table is the result of the following computation: Take two-thirds of the circumference of the shell, multiplied by its length (both dimensions in inches); the circumference of one of the tubes, multiplied by the common length, which would be the length of the boiler in inches, by the number of tubes; two-thirds the area of both the heads, less twice the area of the ends of all the tubes. Adding these three together and dividing by 144 brings the result into square feet of heating surface in a boiler of this type. From this, it will be noticed that some of the surface figured as heating surface is very inefficient, and, while this surface cannot be ignored, certain allowances must be made to offset this inefficiency.

Liberal Allowance.

As before stated, fifteen square feet of heating surface to the horse power has been adopted in the compilation of this table and in doing so ample allowance had been made to offset many adverse conditions met with in the operation and installation of this particular type of boiler. When we recognize the fact that a boiler horse power may be developed from 11.5 square feet of heating surface it will readily be seen that the allowance is a liberal one. The conditions under which a horse power was developed, on a test, from 11.5 square feet of heating surface were, of course, most favorable, inasmuch as hard coal was used and very careful attention was given the fires. It might also be noted here that, during the test mentioned, the temperature of the fire in gases passing through the combustion chamber and tubes was abnormally high, making the temperature of the escaping gases in the chimney rather higher than is to be desired in low pressure heating. The conditions surrounding this test vary widely from these to be met with in the average low pressure steam heating plant. It is the desire, in the design of a steam heating plant, to provide boiler power sufficient to operate the entire system at a moderately slow rate of combustion, this providing for inferior grades of fuel and lack of care and attention necessary to economical results. From the foregoing it will be seen that it is advisable to choose a boiler having a low capacity rating, or in other words, with an under-estimated capacity.

Estimating Radiation.

With the information given in the first two columns of our table it becomes an easy matter to intelligently select a boiler for any requirements. Further note may be made of these two columns, resolving the information therein contained into terms more easily understood by the men engaged in low pressure heating. A boiler power is generally conceded as being equivalent to 100 square feet of gross radiation (mains, etc., included as radiating surface). Some heating men use as a basis in figuring, 85 square feet of actual radiator surface to one boiler horse power, in this way making an allowance for mains, etc. This gives good satisfaction, and may be used in conjunction with this table (fig. 1).

W. H. JAN 07

Fig. 3.

Passing on to the other columns in this table, which are, for the most part, explanatory in themselves, very little comment is required. Under the heading of "Shell" are the figures designating the size of the boiler (diameter in inches—by length in feet). For this reason it is customary in designating a boiler to mention the size according to the dimensions rather than by the rated horse power. Thus we may say a 42-inch x 10-ft. boiler, instead of a 25-horse power boiler. The thickness of plates in column 5 are designed for 100 pounds pressure and the boiler must stand a test of 150 pounds pressure (cold water) before being released from the manufacturer's hands, no boilers being constructed with plates thinner than those mentioned. The grate area is proportioned to the heating surface to give the best possible results and agrees with authorities on heating boilers, assuming the ration of one square foot of grate surface to, approximately, 36 square feet of heating surface.

Estimating Brick Work.

Under the heading of "brick required" will be found information of value to contractors for heating, which can be used for estimating purposes, simplifying the computation of the cost of bricking in, prices on brickwork usually being laid down in various localities as so much per thousand bricks, laid. The last column contains the approximate weights of the various sizes of boilers, complete with all fixtures, front, grate-bars, trimmings, etc.

Figures 2 and 3 are almost self-explanatory. Figure 2 shows general dimensioned drawings of various views of the brick setting of this type of boiler, and, together with the dimensions tabulated in fig. 3 should furnish information sufficient for the erection of these boilers.

The table and dimensions are for the setting of a single boiler. If two or more boilers are to be set in a battery, one wall between two boilers is all that is necessary but this dividing wall should, of course, be not less than six inches wider than the wall on either side of the boilers. It may be often necessary to deviate slightly from the information laid down in this table to meet existing conditions, but, under no circumstances, should the thickness of the walls be any less than given. The drawing shown shows the brickwork carried up to the full height of the boiler. This is not absolutely necessary, although it makes a very much neater construction, but, in any case, the upper part of the boiler shell exposed should be arched over with brick, two courses laid on edge, to prevent loss of heat by radiation.

INVENTOR MAKES BIG CLAIMS.

To merely turn on a gas jet in the cellar and forthwith to have a continuous supply of hot water heating for a large house as well as hot air for the registers is the claim made by Wm. Howard, 248 Macdonell avenue, Toronto, for an invention which he demonstrated to some friends on Wednesday. Not content with supplying hot water, hot air and steam heat from the same little furnace, he claims that he can utilize the waste heat to cook delicacies in the kitchen range.

This combination heater can be operated by either coal, gas or electricity. The heater is made in six different sizes. A four-horse power size boiler, the inventor claims, is big enough for a six storey building. Its gas consumption is only about thirty-five cubic feet an hour, or about equal to an ordinary kitchen burner.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, February 8, 1907

Prices on almost everything necessary to human existence have been advancing so rapidly lately, that it is somewhat of a novelty to have a whole week go by without having a single advance to record. However, that is the condition here at present, and dealers who have purchased supplies during this state of tranquility may feel that they have done themselves a good turn, if prices on any lines should advance in the near future. Unluckily, these favorable conditions are not likely to last for any lengthy period, as past experiences go to show that an article cannot remain at the same price very long. Some sort of a change is due, if only to keep people guessing, and if the prophesies of the "wise ones" count for anything, this change will not mean lower prices.

General conditions remain practically unchanged, business keeping up about the same pace as reported last week.

RANGE BOILERS—Copper boilers have not shown any advance over last week's quotations. We still quote: Iron clad, 30 gallon, $5; 40 gallon, $6.50 net list. Copper, 30 gallon, $33; 35 gallon, $38; 40 gallon, $43.

LEAD PIPE—Very firm. No change in prices. We still quote 5 per cent. discount f.o.b. Montreal, Toronto, St. John, N.B., Halifax; f.o.b. London, 15c per hundred lbs extra; f.o.b. Hamilton, 10c per hundred lbs. extra.

IRON PIPE FITTINGS—Good business reported, with no change in prices. We still quote. Discounts on nipples, ¼ inch to 3 inch, 75 per cent., 3½ inch to 2 inch, 55 per cent.

IRON PIPE — We still quote: Standard pipe in lots of 100 feet, regular lengths, ¼-inch, $5.50; ⅜ inch, $5.50; ½ inch, $8.50; ¾ inch, 11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.50, discounts on black pipe, ¼ inch, 59 per cent.; ⅜ in. 59 per cent.; ½ in. 68; ¾ to 2, 70. Discounts on galvanized pipe: ¼ inch, 44 per cent.; ⅜ inch, 44 per cent.; ½ inch, 58 per cent.; ¾ to 2 inch, 60 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12; 3-4 inch, $15; 1 inch, $22; 1 1-4 inches, $30; 1 1-2 inches, $36; 2 inches, $50. The discounts on black pipe, ¼ inch, 74 per cent.; ⅜ inch, 69 per cent.; ½ inch to 2 inches, 68 per cent. Galvanized, ¼ inch, 59 per cent.; ⅜ inch, 69 per cent.; ½ to 2 inches 58 per cent.

SOIL PIPE AND FITTINGS—Our prices remain: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER—Prices remain the same: Bar solder, half-and-half, guaranteed 25c.; No. 2 wiping solder, 22c.

ENAMELWARE—A good business is being done at the same prices. We continue to quote: Canadian baths, see Jan. 3 1907 list. Lavatories, discounts, 1st quality, 30 per cent.; special, 30 and 10 per cent. Sinks 18 x 30 inch, flat rim, 1st quality, $2.60, special, $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Feb. 8, 1907.

Collections are reported to have been very satisfactory with paper due on Feb. 1 well met by the trade. The season was a particularly good one, with the exception of the shortage in iron pipe, which held back many jobs from being completed. Some of the small firms which indulged in price cutting are said to have run close to the wind, but there have been fewer notes extended than expected.

Some in the trade are looking for a reaction in prices and orders for supplies are being held over as long as possible. There does not appear to be any ground for this hope, however, as quotations on iron, copper and lead are all either very firm at present prices or are still on the advance with stocks hard to get and large quantities sold for future delivery.

This week the only advance is another jump upward on cast iron fittings from 60 to 67½ per cent. It is understood, however, that iron body values are also likely to go higher.

Business is seasonable with one fact black pipe still short. Pipe makers are still finding it hard to get skelp, as producers in the States have found it more profitable to keep their furnaces busy on other lines. It is freely predicted that pipe will be even more scarce during the coming summer than in 1906.

LEAD PIPE—Buying is seasonable with the discount unchanged at 5 per cent. off the list price of 7c. per pound. Lead waste, 8c. per pound with 5 off. Caulking lead 5 3-4c. to 6c. per pound. Traps and bends, 40 per cent., discount.

SOIL PIPE AND FITTINGS—No changes in prices have been made since our last report and we still quote: Medium and xtra heavy pipe and fittings, 60 per cent.; light pipe 50 per cent.; light fittings, 50 and 10 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE—One inch black pipe continues scarce and many are buying ahead in order to ensure deliveries later on. One-inch black pipe is quoted at $4.95, and one-inch galvanized at $6.60. Full list in current market quotations.

IRON PIPE FITTINGS—An advance has been made on cast iron fittings, the change being from 60 to 67½ per cent. We now quote: Cast iron elbows, tees, crosses, etc., 67½ per cent.; cast iron plugs and bushings, 67½ per cent.; flange unions, 67½ per cent.; nipples, 60 and 10 per cent.; iron cocks, 55 and 5 per cent.; Canadian malleable, 30 per cent.; malleable unions, 55 and 5 per cent.; malleable bushings, 55 per cent.; cast iron ceiling plates, plain 65 per cent.; cast iron floor, 70 per cent.; hook plates, 60 per cent.; expansion plates, 65 per cent.; headers, 60 per cent, hangers, 65 per cent.; standard list.

RANGE BOILERS — Sales are fairly large, as many inside jobs are being completed. We still quote: Galvanized iron, 30 gallon, standard, $5; extra heavy, $7.75; 35 gallon, standard, $6; extra heavy, $8.75; 40 gallon, standard, $7; 40 gallon, extra heavy, $9.75, net list. Copper range boilers—New lists quote: 30 gallon, $33; 35 gallon, $38; 40 gallon, $43. Discounts 5 to 15 per cent.

RADIATORS—Buying continues good for this season, with prices unchanged at: Hot water, 67½ per cent.; steam, 50 per cent.; wall radiators, 45 per cent.; specials, 45 per cent. Hot water boilers are unchanged.

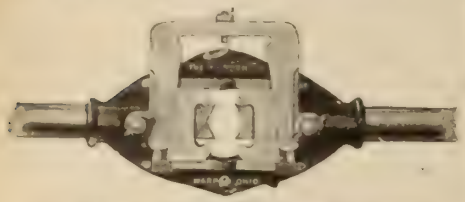
SOLDER—Tin is weaker, but lead is advancing. We quote: Bar solder, half-and-half, guaranteed, 27c; wiping, 23c.

ENAMELWARE—No changes have been made with the January list still prevailing on Canadian baths. We quote: Lavatories, first quality, 20 and 5 to 20 and 10 off; special, 20 and 10 to 30 and 2½ per cent. discount. Kitchen sinks, plate 300, firsts 60 and 10 off; specials, 65 and 5 per cent. Urinals and range closets, 15 off. Fittings extra.

"What are the Advantages of Hot Water over Steam Heating in a Private Residence?"

If a customer asked you the above question what arguments would you use in reply?

Send us an answer by March 1st and outline what advantages steam heating possesses over water for this same class of work.



For the best reply we offer a cloth bound copy of J. J. Cosgrove's splendid textbook, "Principles and Practice of Plumbing."

Keep Your Oil Room Clean

Are you bothered with a dirty oil room? One filled with sticky and filthy cans, measures and funnels? One with oil running all over the floor and furniture? Then you haven't a Bowser outfit.

A dirty oil room puts your store in constant danger of fire. It imperils, not only your own property, but that of everyone in the neighborhood. Many lives, even, have been sacrificed for lack of a Bowser.

Bowser Oil Tanks will keep your oil room perfectly safe and clean. They keep the oil where it belongs, in the storage tank or customer's can. They eliminate leaky barrels and cans, drippy faucets and sticky measures and funnels.

Cellar Outfit for Non-lubricating Oils

It makes no difference how much or how little oil you handle, nor how many kinds. There is a Bowser to suit your needs.

Don't Be Misled

Users of Mueller Brass Goods are Guaranteed Absolute Immunity From All Liability on Account of Patent Suits.

The Glauber Company in recent advertisements in trade journals seeks to make business capital of the fact that they have instituted a suit against the H. Mueller Manufacturing Company, alleging "imitating and infringing supplies."

It is not the desire of the H. Mueller Manufacturing Company to try this Suit in the public prints or to be drawn into a newspaper controversy, but in justification to itself and the trade, feels called upon to direct attention of dealers and consumers to the fact that they will be protected.

The H. Mueller Manufacturing Company is financially responsible and has always stood behind its goods with an *Unconditional Guarantee*. It will continue to do so, but in addition at this time wishes to assure the trade and the public absolute immunity from any liability of whatsoever kind arising from the use of its goods because of this or any similar suit.

Whether the action brought possesses merit is a question for the courts to determine. The mere bringing of the suit carries with it no more weight as to its merit than a bald and unsupported statement of an individual. The H. Mueller Manufacturing Company asks the trade and the public to withhold judgment and not be misled by any statements printed in paid advertisements.

We will continue to manufacture the supplies in question and will protect all sellers and users of same.

EVAPORATION REDUCED TO A MINIMUM

is one of the reasons why PATERSON'S WIRE EDGED READY ROOFING will last longer than any other kind made.

Mr. C. R. Decker, Chesterfield, Ont., used our 3 Ply Wire Edged Ready Roofing fourteen years ago, and he says it is apparently just as good as when first put on.

We have hundreds of other customers whose experience has been similar to Mr. Decker's.

A PERFECT HEATING SYSTEM

A perfect Heating System provides the maximum of heat with the minimum of expense. Incidentally that explains the unprecedented success of "SOVEREIGN" BOILERS.

We do not claim to make the only good boiler on the market—but—and this is important—most practical men declare that the "SOVEREIGN" BOILER is representative of all that is best and most economic about heating systems.

It certainly does pay to recommend the "SOVEREIGN".

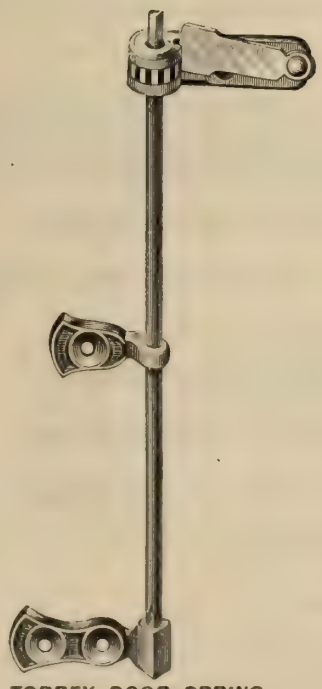
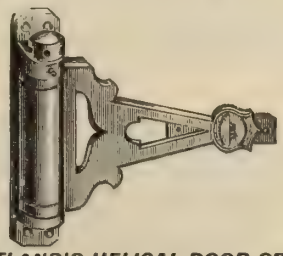
GOOD PROFIT ON THESE

COIL DOOR SPRING



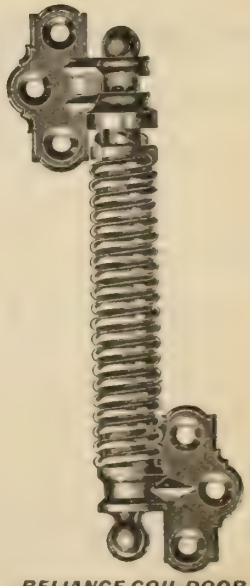
Length 17 inches: Including Screw Hooks, Japanned.
All sizes, Nos. 1 to 6.

There are many little things in the Hardware Trade that some Merchants don't pay enough attention to.



Door Springs, although a very small item, will pay you a handsome profit.

Our annual sales for the lines illustrated, run into hundreds of gross, which is the best possible evidence that we've struck the goods the trade desire, and know how to price them satisfactorily.



FOR FURTHER INFORMATION, ASK OUR TRAVELERS, OR WRITE US.

Our Prices are Right

Lowmoor Iron is the iron to sell for use in all work where strength, ductility, ease in working and ability to withstand repeated shocks are required.

We have sold it for thirty years and it has always been found reliable.

It is largely used by the leading Canadian railway, car and locomotive builders and machine shops.

Recommend Lowmoor Iron wherever reliable iron is needed, and keep it in stock.

We have it in rounds, squares, flats.

Also Lowmoor Iron boiler rivets and plates.

CAPEWELL HORSE NAILS

"THE BEST IN THE WORLD"

In these times the business which does not show a substantial increase from month to month is retrogressing. The increase in OUR business for last month over January, 1906, was so marked (in spite of it being a poor shoeing month) that we feel justified in asking dealers in horse nails, ARE YOU IN LINE? In line with those enterprising merchants who are very profitably selling CAPEWELL HORSE NAILS, and who realize that these are easily the best sellers; best, because they are so much better than other makes. The farrier who once uses CAPEWELL NAILS will use no other

We maintain a staff of experienced and obliging salesmen to work up trade for YOU, Mr. Dealer. Salesmen who are practical horseshoers, and full of enthusiasm for the incontestable superiority of their goods.

We solicit your business because we have a better article than is made elsewhere, and because we are prepared to give you the perfection of service. These are two very good reasons, but we will give you some more next week.

1907 calendar and catalogue free on request.

The Capewell Horse Nail Co., Toronto, Ontario

Branch, 212 Nena Street, Winnipeg, Man.

WHEN BUYING, BUY THE BEST

You get the best value for your money when you buy our handles. Our Axe Handles are made of the best hickory that can be secured in the Southern States. We have our best brands registered. They are Empire, Imperial and Champion. All are well seasoned, nicely labelled and finished. Get in line by putting them in stock.

We also manufacture a full line of Hammer, Sledge and Pick Handles.

The Cost of Installing Business Systems.

The cost of installing Business Systems is in proportion to the size of the business.

A small business requires a more or less simple system of accounting the expense is almost nothing compared to a big business whose arrangements are more complex.

* * * * * *

Our Monthly Account System is especially adapted to the retail business.

Our Monthly Account System does it all in one operation makes the entries in your books and prepares your bills at the same time.

Our Monthly Account System stops the work from piling up at the end of the month and enables you to have each customer's bill ready at a moment's notice.

* * * * * *

Let us tell you how Business Systems can be adapted to your business.

It costs you one cent to know.

A post card will bring you the information.

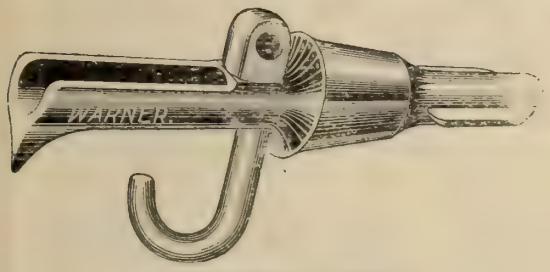
THE IDEAL LAWN-MOWER GRINDER



In offering the Ideal Grinder to the hardware fraternity, the repair men and blacksmiths of Canada this season, we do so with the utmost confidence in the reliability of the machine. We have made some improvements over previous patterns, and now claim the Grinder to be as nearly perfect as can be made. A study of the illustration will show the principle upon which it works. Any style of lawn-mower may be inserted, and within 15 minutes each blade will possess not only a keen edge, but an **EXACT BEVEL**, and it is this exact bevel which is so necessary to the perfect operation of the mower. One can obtain the same price for sharpening a mower that he did when he used the "file and elbow grease," and spent an hour or more in doing the work now requiring 15 minutes. Fitted for operation by power when needed, and can be used for tools, skates, etc., making it an all-around utensil. Send for interesting circular.

Ideal Lawn Mower Grinder.

Ventilation is Important

as a feature of modern buildings.

There are many buildings and residences whose occupants are afflicted with drowsiness and headaches, because the ventilation is imperfect or has been altogether neglected.

THE AEOLIAN VENTILATOR

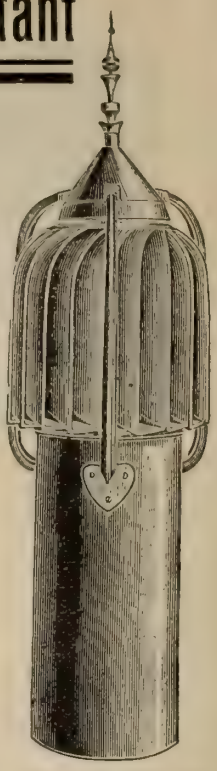
is unexcelled as a means of producing pure air in large buildings, closet rooms, vaults of churches, schools, factories, stables, etc.

As will be seen from the accompanying illustration, **The Aeolian Ventilator** is very ornamental in appearance, while also possessing exceptional lasting qualities.

We like to talk about the "Aeolian" Will you write us for particulars?

Read this testimonial:

Ottawa, June 4th, 1903.



Messrs. The J. W. Harris Co., Ltd., Montreal.

Gentlemen,—In reply to your letter of 1st of June, inst., beg to say "Aeolian" Ventilators we got from you have always proved satisfactory to us and we can recommend them when such an article is required.

Yours respectfully,
McKINLEY & NORTHWOOD.

(Can be supplied in copper, if so desired.)

Peerless Woven Wire Fence

Here is a fence that will sell. Once up no need for repairs. It lasts for years—just what you are looking for. It's horse-high, pig-tight and bull-strong. No stock can get over, under or through it. The most unruly animal can't butt it down and there are no barbs to tear and injure stock. It's

WIND AND WEATHER PROOF

The Peerless lock holds it perfectly rigid and the wires can't slip up, down, nor sidewise. Cold weather won't snap it and hot weather won't make it sag. It's the greatest thing out for farmers, stockmen and all other fence users which makes it a red hot proposition for dealers. It comes in rolls all ready to put up. It's easy to handle. Write for prices.

The Banwell Hoxie Wire Fence Company, Ltd.
Dept. J, Hamilton, Ont.

Per Rod, You Make More Profit on the "Dillon"

than any other fence. For just this reason: The "Dillon" **is all fence,** no locks, ratchets, pickets, etc., to increase the consumer's price and reduce the dealer's profit.

Rolled out in your store those No. 9 High Carbon wires, which are 500 lbs. stronger than ordinary fence wire, show their value. And mind you, all the profit isn't on your side. Your customer shares it with you. But then **that's your profit** after all, isn't it?

Four Reasons why INVICTUS FIBRE is the BEST FIBRE PAPER on the Market

1. Invictus Fibre is made from personally selected pulp wood cut on our own limits.
2. This special pulp wood is again rigidly culled on arrival at our mills
3. The pulp from which Invictus Fibre is made is manufactured in our own pulp mill and transferred at once to the paper mill, avoiding all drawbacks of transportation.
4. Invictus Fibre will increase in strength and not grow hard and brittle as does fibre made from sulphite pulp. This is a quality of the peculiar and selected pulp from which Invictus Fibre is made.

A trial order will convince you that we are correct. See that each package bears the words "Invictus Fibre." Every ream contains 480 sheets

GOTHIC CEILING PLATE NO. 5002

our

Classified Ceilings

never fail to please. They give tone to any interior. No retailer should be satisfied with a plaster ceiling in his store, when at a moderate cost, he can have the most handsome and durable finish obtainable. Metal ceilings never crack and drop off like plaster, and can always be refreshed with soap and water.

We have dozens of letters like the following:

STRATHROY JAN. 19, 1907

In 1900, I purchased a ceiling for our store, which has given perfect satisfaction. It has been admired by a great many people—to-day it is as good as ever. We have only painted it once, that was when it was put up. I may say that several of my friends have been induced to use your ceilings since our was completed. In short, your goods have pleased perfectly.

Yours truly,
(Signed) H. C. BRITTAIN.

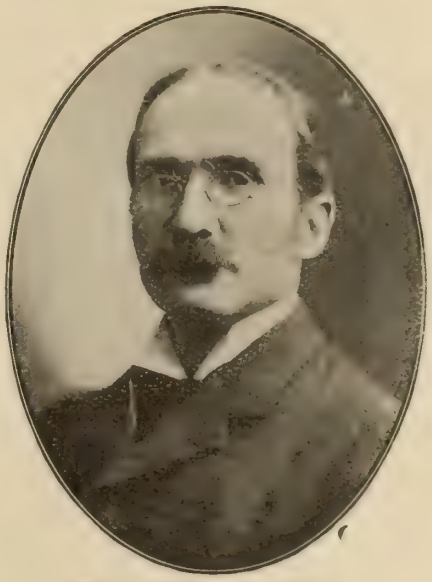
Some Present Trade Requirements

Tight Money for a Time—Law of Averages Calls for Lean Years—Corruption Follows Paternalism—Iron Bonuses Unfair to Ontario—Relations With the Mother Country Should be Undisturbed—Railway Commission has Raised Freight Rates—Should Have More Export Help.

By Peleg Howland, Retiring President of The Toronto Board of Trade.

The large increase in deposits in the chartered banks would indicate that the people of Canada generally are thrifty and saving, notwithstanding the extraordinary inducements offered for speculation in mining and other enterprises. All these deposits, however, find ready employment in the expansion of business as shown by the increase in current loans. The difficulty among bankers now would seem to be to keep their reserves in safe proportion to their liabilities and find means for the constantly-increasing demands of their customers; in consequence a period of dear money is probable for at least some time to come, with the possibility of curtailment in a degree of the prevailing activity.

While the railway construction going on not only in the new provinces but in the older portions of the Dominion and the constantly-increasing immigration must help towards continued prosperity, it must be remembered that we have had a series of unusually good crops, upon which we are largely dependant, and that the law of average would lead to the expectation of lean years; that the prices of nearly all commodities, including labor, are dangerously near the point of inflation; that our national expenditure is becoming extraordinarily large with immediate prospects of increase; that we are a debtor nation, and that the drain upon us for interest on our foreign borrowings, national, provincial, municipal and private, must be very heavy. It would not,therefore, seem out of place to echo the note of warning already given out by financial men and urge reasonable caution.



The United States have during the past few years been experiencing a prosperity perhaps proportionately greater than our own; they have had, however in the process of developing their almost limitless resources, periods of extreme depression. These in the past used to precede ours almost a year; whether that will continue to be the case cannot be foretold. It would be well, though, to keep a careful watch upon the conditions there for any sign of change.

Too Much Reliance on Law.

Comment is timely on the deplorable revelations made during the past year by the investigations into some of our commercial, financial, insurance and political affairs. While doubtless periods of prosperity and speculation must have accompanying evils of this kind, the conclusion cannot be avoided that they are also fostered by paternalism, whether taking the form of protection by customs duties, by bonuses, national or other, or of sumptuary laws that tend to make the individual lean on government help for his rate of wages, his profits or for the safety of his investments, to the weakening of the sturdy independence, self-reliance and toughness of fibre which is of such essential importance. The lesson taught in my opinion, is against any attempt to effect a cure by further adding to the criminal code, increasing the list of restrictions or by making government still more responsible.

Opposed to Government Bonuses.

I am strongly opposed to government bonuses generally as being one of the worst forms of class legislation, and I desire to call attention to the fact that the manufacture of the base products of iron and steel in Canada is now being fostered by a series of bonuses accompanied by customs restrictions, and very large and increasing sums are being exacted annually from the whole people for the benefit chiefly of an industry located in the far east, which, if capable of producing as represented when established, should be able to stand alone. Ontario is naturally situated to draw

PELEG HOWLAND, TORONTO.

its raw materials for the more finished products in iron and steel from Pennsylvania, Ohio and West Virginia, and if allowed to do so would have chances of very large growth in all the smaller industries, which are really of so much more benefit to a community than the immense establishments, to a large degree monopolies, which produce the coaser materials. It would seem unwise on our part not to avail outselves of our neighbor's coal and iron as long as they remain the cheapest products of the kind, rather than tax ourselves to upbuild an industry a thousand miles away. We are, as yet, the largest consumers of this products, and bear the greater portion of the taxation, but are handicapped by the double freights in getting back into the east, which has as well an advantage proportionately in freights westward. Ontario must sooner or later awaken to the injustice of the present policy, which takes from it the chance of supremacy that naturally belongs to it, with the accompanying danger of sectional difference."

Opposed to Preferential Treatment.

It may perhaps be proper for me to say here that personally I do not favor the resolution urging preferential treatment of our products in the old country, nor that indicating that Canada should contribute to the defence of the empire, feeling as I do that we are able to progress without favors, and believing that entanglements must arise from any attempt to alter our relations to the mother country or to make contributions without representation, with the grave danger of our either breaking away entirely or losing that measure of independence which is of so much importance to us.

In regard to representations made before the Railway Commission that an investigation should be made into the freight rates of Ontario and that there is a discrimination in favor of Montreal in the rates to points both east and west of Toronto, no judgment has yet been given.

The conclusion is forced that the commission has not the necessary expert assistance to get through its work, and I would advocate representations to the government for such changes as will make the commission more efficient, including the extension of its jurisdiction to Dominion Government railways, which are now in my opinion, improperly exempt. The question of rates and of discrimination is of more importance to the people at large than the rights of one railroad to cross another, or matters of a similar nature which seem to chiefly occupy the attention of the commissioners.

The railroads have recently submitted to the commission schedules of rates for merchandise bound inward from many places in the United States; they are substantially higher than those now existing, and their adoption is suggested in order to overcome the decrepancy in the rates existing from American and Canadian places on the border, those from the latter being now much the higher. The co-operation of the manufacturers is sought by placing certain of their raw materials on a special basis, which will mean practically no advance Generally speaking, however, their adoption will mean higher freights for merchants and consumers on inward stuff from the United States. A protest has been entered against these being considered at all until a general and thorough inquiry be made into the fairness of the rates now existing throughout Ontario. Any adjustment of rates upward should be resisted by every possible means

Commission Raises Rates.

I would also call attention to the arrangements existing between railroads which prevent them from competing in

rates with one another. Such combinations are surely as harmful as arrangements affecting the prices of commodities, and are as much entitled to be forbidden by law. The Railway Commission has undoubtedly up to the present been averse to these freight associations, and has served to increase rather than reduce the rates, thus helping to add to the revenue of the railroads, and it is questionable if the uniformity obtained is any compensation to the people generally for the additional cost of the service.

Unfair Discrimination.

The custom of charging the ordinary shipper from various centres in the northwest in some instances more than double the rates given to wholesale-dealers located in those centres shipping to traders, and which is a factor in the many difficulties experienced by the eastern merchant in getting into that country with his goods, still exists, and should have the attention of the commission at once. An eastern merchant shipping to—I will say Calgary—a carload of goods to a distributing agent to be broken up and reshipped to various consignees at points in the neighborhood, must be on a list as carrying a stock in Calgary, and the consignees must be traders before these consignees can get the benefit of the so-called traders' rates, otherwise being charged the ordinary class rates. The following examples of these rates, given as existing on January 5 last, will give an idea of the differences between the traders' rates and the so-called class rates which are paid by the ordinary shipper or consignee, the figures being per hundred pounds:—

Calgary to Revelstoke—Class rates—First, $1.35; second, $1.13; third 90c.; fourth, 68c. Trades rates—First class—64c.; second, 55c.; third, 45c.; fourth, 37c. Calgary to Fernie, B. C.—Class rates—First, $1.27; second, $1.06; third, 85c.; fourth, 64c. Traders' rates—First class, 61c.; second, 53c.; third, 44c.; fourth, 37c.

Favors Local Merchant.

Similar conditions exist at Winnipeg, Brandon, Regina, etc., though the differences are not so extreme. This system meets with the favor of the local wholesale merchant, as it protects him from his eastern competitor, and also of the retailer in the smaller towns, as he is in his turn protected, the tendency being to force the consumer to patronize the nearby merchant. It is improper, however, and contrary to the principle upon which charters are granted. It is not practised in the east, the tendency here being rather to give the advantage if any, to the more distant place. It should be stopped.

Reciprocal Demurrage.

The country suffers every year from a shortage of cars and from the inability of the railroads to move promptly the rolling stock they are able to supply. This year the trouble has been particularly serious, and has been felt by all classes of the business community, being one of the causes of the scarcity of money. The railroads now very properly enforce demurrage charges on customers detaining cars over a certain specified time, but are under no penalty themselves if shipments remain in their possession longer than is reasonable. Any system of reciprocal demurrage will be vigorously opposed by the railroads and many strong arguments will be used against it. It seems reasonable, however, to think that what works well in one way should in the other, and that its adoption might lead to such exertion on the part of the companies as will overcome, at least to some extent the evil complained of. The system has already been advocated by board, and it is well worthy of further consideration.

Anti-Dumping Law Unfair.

The attention of the Toronto Board of Trade Council has recently been called to the anti-dumping clause in the custom tariff, the application of which is being extended at the present session of Parliament. "I cannot urge too strongly that the matter be thoroughly investigated. A regulation that restricts a merchant's right to buy as cheap as his ability and capital will permit, and penalize him if he does exercise such ability by requiring, besides the regular duty, the payment in the shape of special duty of any concession he can obtain in price below what the authorities fix as the home value of the goods in the country of export up to fifteen per cent. of such home value, and compels the taking of such an oath as the following—"That no arrangement or understanding affecting the purchase price of the said goods has been or will be made or entered into between the said importer and the exporter, or by anyone on behalf of either of them, other than as shown in the said invoices, either by way of discount, rebate, salary, compensation or in any other manner whatsoever" which forms a part of the oath taken on the entry of goods for consumption—approaches too nearly to despotism, surely, to be borne by this community, and is besides calculated, as the oath suggests, to encourage fraud and dishonesty, and is not in the interest of the consumer. In my opinion, as a restriction on trade, no combination can compare with it. If the manufacturer requires more protection it should be afforded him in some less objectionable way.

NEW INVENTIONS.

A hydrocarbon-burner, invented by J. N. Blain and O. H. Smith, Ottawa, Kan., is said to present efficient means for carbureting the air let into the burner. A further object is to construct the fire-pan so as to enable the same to be readily inserted in an ordinary stove or furnace and to provide the same with special means for facilitating the gasifying of the fuel when fed thereto.

A newly patented spring fish-hook, invented by A. S. Martin, Geneseo, Ill., relates to hooks of the type in which a spring-actuated auxiliary hook is released when the fish strikes at the bait, thus allowing a plurality of hooks to obtain a firm hold upon the fish and thereby prevent its escape. The device is especially useful in the catching of quick-striking fish, such as trout or bass. The hook is only operated by actual contact.

A. Allen, Lead, S.D., has a new invention which refers especially to that class of saw frames for receiving a detachable blade. The object is not only to improve the construction of saw-blades of this character, making them more convenient to handle, cheapening and simplifying them, but also to provide a novel and easily-operated means for stretching the saw-blade in the frame after it is applied thereto.

B. Stoll, Gardena, N.D., has a new carpenters' tool, the object of which is the provision of a new and improved carpenters' tool more especially designed for pressing floor-boards, sheathing-boards, and the like, into proper position for nailing. It is very simple and durable in construction and can be cheaply manufactured.

A patent has been granted J. A. R. Damonte, New Orleans, La., for a magnetic tack hammer in which the tacks are placed in the magazine indiscriminately, and when the hammer is brought up to a striking position it causes the tacks to scatter, and on the outward swing or striking movement they find their way one at a time through the tube and slot in the handle and down into the slideway.

W. McCormick, Hillyard, Wash., has secured a patent for a bolt-extractor, designed, primarily, for the removal of crown-bolts from the crown-sheets of locomotives, although its use is not limited to this particular class of work, since it will be found to be an effective means for removing bolts in other relations, especially those with round or other forms of heads on which an ordinary type of wrench cannot obtain a purchase.

D. W. Patton, Moberly, Mo., has invented a nut lock which when in use the nut is screwed on the bolt the distance desired and turned so that the flattened end of the bolt lies parallel to the grooves in the nut. The staple is inserted in the grooves, thus holding the flattened end portion of the bolt between the two arms thereof and preventing its rotation. Means are adopted to engage the edges of the nut and prevent accidental displacement of the locking member. The latter being preferably of wire, its outer ends may be bent out of alignment after its insertion, thus serving as an additional means for holding the same in place.

WIRE ROPE FOR HAY FORKS.

The B. Greening Wire Company, Hamilton, report that during the last few years they have sold wire rope to be used as hauling rope on hay forks, and last year while the sale was not large, they sold more than they had ever sold before, this indicating that wire rope is a success for this purpose. In a circular letter the company points out that as Manilla rope is generally sold on a very fine margin, the hardware trade should be interested in substituting a wire rope that will bear the merchant a better profit for a line that is cut so fine. An opportune time to look into this subject is before the farmers get busy with their spring work. Wire rope is also used for the track, to take the place of rod, but this is a different make of rope altogether to the hauling rope.

PROPOSED CHANGES IN THE NEW TARIFF

Hon. Mr. Fielding has given notice of about 120 changes in the new tariff schedule brought down in Parliament on November 29th last. No official explanation of the changes will be given until the resolutions are moved in the House. For the most part they are of a technical or relatively unimportant character, designed to meet the objections of manufacturers and others on minor points.

Changes in Iron Duties.

Some important changes are made in the duties in iron and steel. A new item is introduced comprising flat-eye bar blanks, not punched or drilled or rolled; edge plates of steel over twelve inches wide for use in steel structural work or car construction, the preferential tariff being fixed at $2 per ton, the intermediate at $2.75, and the general at $3.

On scrap iron and similar material the British preference has been reduced to 50 cents per ton. The duty on rolled iron or steel beams and other rolled shapes other than railway bars or rails has been fixed at $2 per ton under preferential, $2.75 intermediate and $3 general. Boiler plate not more than thirty inches wide, wrought seamless tubes for boilers, wire rigging, and steel wire to be used in the manufacture of rope have been placed on the free list.

The changes, as they affect the hardware trade, are as follows:

Item 261 is amended to place spirits of turpentine on the free list instead of dutiable at 5 per cent.

Item 270 provides for a reduction in the general tariff on crude petroleum, gas oils other than naphtha, benzine and gasoline, the duty to be one and a half cents a gallon instead of two and a half cents.

Item 281 is changed to read:—"Fire brick of a class and kind not made in Canada, preferential free, others 5 per cent. each." The present tariff rates are 5, 7½, and 10 per cent.

Item 316A is a new one. It reads:—"Incandescent lamp globes for use in the manufacture of incandescent lamps, and mantle stocking for gas lights, 5, 7½ and 10 per cent."

Duties on Glass.

Item 326 adds to the dutiable articles of glass of all kinds, bottles, lamp chimneys, globes, etc., the words, "blown glass, table and other cut glass ware."

Item 344 changed to read:—"Tinware, japanned or not, and all manufactures of tin, n. o. p., 15, 22½ and 25 per cent."

Item 355, which provides for the free importation of Britannia metal and German silver, strikes out the words "or bars" when it applies to the free importation of German silver in bars.

Item 374, on iron or steel scrap, wrought, being waste or refuse, including punchings, cuttings, or clippings of iron or steel plates or sheets having been in actual use; crop ends of tin plate, bars, or of blooms, or of rails, the same not having been in actual use, the British preferential has been reduced from seventy to fifty cents.

Item 379 has been changed to read "rolled iron or steel beams, channels, angles and other rolled shapes of iron, steel not punched, drilled or further manufactured than rolled, weighing not less than thirty five pounds per lineal yard, not being square, flat, oval or round shapes, and not being railway bars or rails, per ton preferential, $2; intermediate, $2.75; general, $3."

Item 379 is a new item, as follows: "Flat eye bar blanks, not punched or drilled, and universal mill or rolled plates of steel over twelve inches wide, for use exclusively in the manufacture of bridges or of steel structural work or of car construction, per ton, preferential, $2; intermediate, $2.75; general, $3.

Boiler Plate Free to Manufacturers.

Item 380 is changed to read as follows:—"Boiler plate of iron or steel, not less than thirty inches in width and not less than a quarter of an inch in thickness, for use exclusively in the manufacture of boilers, under regulations by the Minister of Customs, is made free in all the tariffs."

Item 381 has been changed to read:—"Rolled iron or steel plates, not less than thirty inches in width and not less than ¼ of an inch in thickness, n. o. p., per ton, preferential, $2; intermediate, $2.75; general $3."

The item formerly was "Plates of 48 inches preferential, 5 per cent.' intermediate, 10 per cent., and general, 10 per cent."

On item 381 "strips, polished or not," have been added after "steel sheets." Preferential, free; intermediate, 5 per cent.; general, 7½ per cent. "Flat galvanized iron or steel sheets" have been struck out.

Item 386 has been made to read:—"Rolled iron or steel and cast steel, in bars, bands, hoops, scroll, strip, sheet or plate, of any size, thickness or width, galvanized or coated with any material or not, and steel blanks for the manufacture of milling cutters, when of greater value than 3½ cents per pound: preferential, free; intermediate and general, 5 per cent. each."

Item 387 is a new one, and reads:—"Steel in bars or sheets, to be used exclusively in the manufacture of shovels, when imported by manufacturers of shovels: preferential, 10 per cent.; intermediate, 12½ per cent.; general, 15 per cent."

Item 395—Wrought or seamless iron or steel tubes for boilers, n.o.p., under regulations prescribed by Minister of Customs, flues and corrugated tubes for marine boilers, are made free in all three tariffs. It was: Preferential, free; intermediate and general, 5 per cent. each.

Item 397—Tubes of rolled iron or steel not joined or welded, not more than 1½ inches in diameter, n.o.p., have been made free in all tariffs.

Increase on Coil Chain.

Item 410—Coil chain, coil chain links and chain shackles of iron or steel five-sixteenths of an inch in diameter and over,: preferential, 5 per cent. as at present; intermediate increased from 5 per cent. to 7½ per cent., and general from 5 per cent. to 10 per cent.

Item 111—Malleable sprocket or link belting chain is made free in all the tariffs. It was 15 per cent., intermediate 17½, and general 20 per cent.

Item 151A is new. "Stoves, urns of metal and dove tails, chaplets and lining tubes of tin for use in the manufacture of stoves, preferential 5 per cent., intermediate 7½ per cent., general 10 per cent."

Item 160—After the words "processes n." the words "iron or copper" are struck out and the word "metals" inserted instead.

Item 161A is new. "Iron or steel pipes, not butt or lap welded, and wire bound wooden pipe not less than 30 inches internal diameter, when for use exclusively in alluvial gold-mining, preferential 5 per cent., intermediate 7½ per cent., general 10 per cent.

Item 162, which formerly included only "blast furnace slag trucks," is amended to include blowers of steel of a class or kind not made in Canada, for use in the smelting of ores or in the reduction, separation or refining of metals, rotary kilns, revolving roasters and furnaces, of metals of a class or kind not made in Canada, designed for roasting ore, mineral, rock or clay, blast furnace, slag trucks and slag pots of a kind not made in Canada, made free in all tariffs.

Item 521A is new. Seamless cotton or linen duck, in circular form of a class or kind not made in Canada, for use in the manufacture of hose pipe, made free in all tariffs.

Item 682—After the words Manila rope insert "not exceeding 1½ inches in circumference"; before the words "fishing nets" strike out the words "deep sea."

Drawback Increased to 99 Per Cent.

Schedule "B" covering goods subject to drawback for home consumption is amended so as to make the portion of duty (not including special or dumping duty) payable as drawback, 99 per cent. instead of 95 per cent.

Item 1,002 in this schedule is changed to read: "Malleable iron castings and pig iron," instead of "rolled iron, rolled steel and pig iron."

In item 1,009 all the words after augur bits are struck out, and bit braces is added to the other items in which drawback is payable.

The following items are also added to schedule "B" as subject to payment of drawbacks:

1,014—Nickel, nickel silver and German silver in bars, rods, strips, sheets and plates, when used in the manufacture of spoons and cutlery, a drawback of 65 per cent.

Item 1,015—Rolled angles of iron or steel, nine and ten gauge, not over one and a half inches wide, and used in the manufacture of bedsteads, are subject to a drawback of 99 per cent.

Item 1,017—Lap-welded tubing of iron or steel, not less than two and a half inches diameter, threaded and coupled or not, testing 1,000 pounds pressure to the square inch, when used in oil or natural gas wells, and for transmission of natural gas under high pressure from gas wells to points of distribution, drawback 99 per cent.

Item 1,018—Machinery imported prior to July 1st, 1908, and other articles not machinery, when entering into the cost of tin plate manufactured in Canada, drawback 99 per cent.

Item 1,019—Bituminous coal, when imported by proprietors of smelting works and converted at the works into coke for the smelting of metals from ores, drawback 99 per cent.

Retail Hardware Association News

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding Association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

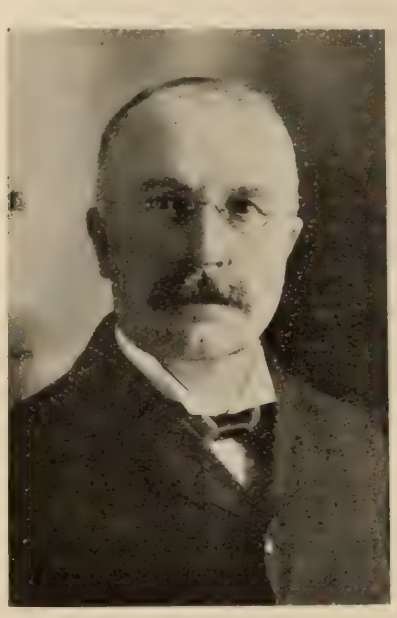
Officers Retail Hardware and Stove Dealers' Association of Western Canada:

President—A. J. Faulkner, Deloraine.
First Vice-President—J. B. Curran, Brandon.
Second Vice-President—W. M. Gordon, Winnipeg.
Secretary-Treasurer—J. E. McRobie, Winnipeg.
Executive—Alberta, A. E. Clements, Olds; C. F. Comer, Calgary; A. R. Anger, Okotoks.
Manitoba, H. S. Price, Rosseveam; A. P. Macdonald, Winnipeg; O. Gilmer, Winnipeg.
Saskatchewan, G. K. Smith, Moose Jaw; S. A. Clark, Saskatoon; J. R. Fox, Weyburn.
Officers Western Board (elected by general merchants and hardwaremen in joint session): President, W. G. McLaren, Souris, Man.; vice-president, G. K. Smith, Moose Jaw, Sask.; H. C. Hamelin, Winnipeg, Man.; secretary, W. A. Coulson, Winnipeg, Man.; treasurer, J. E. McRobie, Winnipeg, Man.; auditor, J. A. Lindsay, Winnipeg, Man.
Association offices, 53 Scott building, Main street, Winnipeg.

Officers Ontario Retail Hardware and Stove Dealers' Association:

President—A. W. Humphries, Parkhill.
1st Vice-President—W. G. Scott, Mount Forest.
2nd Vice-President—J. R. Hambly, Barrie.
Treasurer—John Caslor, Toronto.
Secretary—Weston Wrigley, 10 Front St. East, Toronto.
Executive Committee—The officers and J. W. Peart, St. Marys; M. R. Marshall, Dunnville; D. Brocklebank, Arthur; F. W. Jeffery, Midland; E. P. Paulin, Goderich, and Frank Taylor, Carleton Place.
Auditors—J. W. Peacock and C. F. Moorhouse, Toronto.

NOVA SCOTIA ORGANIZING.



The date for the convention of the new Nova Scotia Retail Hardware Association has not yet been fixed, but announcement will be made in these columns as soon as it is decided upon. At a preliminary meeting held at Halifax, on Jan. 29, the following representative firms were enrolled personally or by letter:

C. P. Moore, Sydney.
A. J. Walker & Son, Truro.
H. A. West, Annapolis.
Douglas & Co., Amherst.
Dunlap Bros. Co., Amherst.
Dakin Bros., Digby.
George McLaren, Liverpool.
C. V. Mackintosh, Liverpool.
Thompson & Sutherland, New Glasgow.
Bent & Cohoon, New Glasgow.
Middleton Hardware Co., Middleton.
J. H. Cameron, Parrsboro.
D. G. Kirk, Antigonish.
K. Sweet & Co., Antigonish.
Frank Powers, Lunenburg.
J. T. Powers & Co., Bridgewater.
A. S. Austen, Halifax.
A. L. Melvin, Halifax.
E. K. Spinney, Yarmouth.
S. A. Crowell & Son, Yarmouth.
Wilcox Bros., Windsor.
Karl Freeman, Bridgetown.
T. P. Calkin & Co., Kentville.
H. A. Patton, Oxford.

Frank Powers, Lunenburg, one of the most progressive stove dealers and heating contractors in the Maritime provinces, has been an active spirit in the work of organizing, according to W. H. T. Spinney, Yarmouth, who writes to the editor of Hardware and Metal: "I thank you for the interest you take in the Maritime provinces. While our business is mostly wholesale, yet we are interested in the retail merchants and wish to assist them all we can that both the jobber and retailer may participate in profits which are due their respective branches."

WESTERN HARDWARE DEALERS PROTEST.

A strong deputation of hardwaremen, representing the Retail Hardware and Stove Dealers' Association of Western Canada appeared before the Law Amendments committee of the Manitoba Legislature last week to protest against some proposed legislation in reference to druggists and early closing. For some time the Winnipeg druggists have been in trouble about the early closing by-law. Under the Winnipeg city by-law all retail stores are compelled to close at 6 p.m. Under the strict interpretation of the law the drug stores are also supposed to close, although they may open for emergency calls; in practice it is a well understood thing that the drug stores may remain open for the sale of drugs and medicines. Now, the drug stores carry many articles which the also stocked by the hardware and stationery stores and there have been complaints that they have been selling these lines after hours. One or two prosecutions have resulted and the druggists have claimed that they were being prosecuted in a petty manner.

FRANK POWERS, LUNENBURG N. S.
Who is taking an active part in the work of organizing the retail hardware trade in Nova Scotia.

Appeals to the city council accomplished nothing and they accordingly went to the Manitoba Legislature for an Act enabling drug stores to remain open after hours.

The hardware men were alive to a danger in the situation, and accordingly a strong deputation waited on the Law Amendments committee last week to point out the unfairness of allowing drug stores to remain open after 6 p.m. to sell razors, cutlery and other lines of goods also carried in hardware stores that are compelled by law to close at 6 p.m. Among those in the delegation were A. J. Faulkner, president of the Western Retail Hardware Association; J. E. McRobie, secretary; O. Gilmer, J. E. Thomas, A. P. Macdonald, W. A. Templeton, J. E. Riley, A. Dykes, F. W. Weir, E. B. Lennox, W. M. Gordon, C. C. Faulkner, Neil Lightley, Robert Wyatt and Chas. W. Graham.

J. W. E. Armstrong, solicitor for the association, explained the grievances of the hardwaremen. Druggists stock such goods as razors, gasoline, sporting goods, all sorts of oil, cutlery, benzine, etc., all of which are legitimate hardware lines. It would be unfair to allow the drug stores to sell these lines after hours.

It was finally decided to leave the matter with the local councils, who may specify classes of goods which may not be sold in drug stores after hours.

LETTER FROM BARRIE.

The following letter has been sent for publication on this page by one of the members of the Ontario Association:

Sir,—Allow me to congratulate you and the executive officers of our association for the excellent work done since its formation less than a year ago. I have read with a great deal of interest and benefit of the good work accomplished, as reported in the columns of that excellent journal: Hardware and Metal. In order to keep abreast of the times and to be thoroughly posted in our business it is very essential that we should be strongly organized and kept posted continually by such a valued journal as the Hardware and Metal.

Why, would you believe, when the petition to be sent the Postmaster-General re the Parcel Post Delivery was taken to the business men of our town by the hardware dealers, the other merchants do not know the reason for the action. That in itself is sufficient to convince any sane man alive to his interests how necessary it is to have an organization, with live officers, continually looking after our interests and protecting the same. Then it behooves every hardware merchant to become a member of our organization and strengthen the power of our vigilant officers by sending their application for membership to our secretary and also by reading Hardware and Metal every week.

CONVENTION AT WINNIPEG.

In spite of the very adverse conditions and snow blockades in many districts which prevented a large percentage of the members of the Western Canada Retail Hardware and Stove Dealers' Association from attending the annual meeting, which was held in Winnipeg on Tuesday and Wednesday of this week, there was a fair number on hand to take part in the business transacted at the convention. All of the old officers were elected, as follows:

President, A. J. Falconer, Deloraine.

First vice-president, J. B. Curran, Brandon.

Second vice-president, W. M. Gordon, Winnipeg.

Secretary-treasurer, J. E. McRobie, Winnipeg.

Executive, Alberta—A. E. Clements, Olds; C. F. Comer, Calgary; A. R. Auger, Okotoks.

Manitoba—H. S. Price, Boissevain; A. P. Macdonald, Winnipeg; O. Gilmer, Winnipeg.

Saskatchewan—G. K. Smith, Moose Jaw; S. A. Clark, Saskatoon; J. R. Fox, Weyburn.

Dominion Association Endorsed.

After some discussion, in which many members expressed themselves as gratified with the extension of the retail hardware association work into Ontario and the Maritime Provinces, the suggestion made by the executive of the Ontario Association that a temporary organization be effected to cover the Dominion, by appointing the presidents and secretaries of the Ontario and Western Canada Associations as a provisional committee to act until a permanent Dominion association is formed. This action is, of course, to be endorsed by the convention in Toronto on Good Friday, but it can be taken for granted with a provisional committee composed of President A. J. Falconer and Secretary J. E. McRobie, appointed by the Western Association, the movement in Ontario will fall into line and perfect the proposed organization. Definite steps can then be taken to secure affiliation of the new Nova Scotia Association, and arrange for the organization of the trade in other provinces.

Parcels Post Legislation Condemned.

A strong resolution was passed by the convention calling upon the Postmaster-General to withdraw the legislation which he has outlined in providing for an extension of the parcels post system and the incorporation of the c.o.d. feature in the postal regulations. The sentiment of the delegates was entirely opposed to the measure under consideration by the Postmaster-General, as it would tend to centralize trade in the larger cities and deal a heavy blow at hundreds of small towns and cities in the western provinces, making it much harder for the farmers and other settlers to secure the goods they require in any quantity and with any promptitude. It was felt that the measure would particularly hurt the retail trade and the farmers in the west, and steps will be taken to see that each western member of Parliament is thoroughly informed as to the meaning of the proposed legislation.

Trade Press Excluded.

For the first time in the history of the western association the representatives of the trade press were excluded from the meetings of the convention. This action came as a surprise, as it was almost entirely due to the assistance given by the trade newspapers that the association had been able to organize itself so strongly in such a short period of time. At the time of writing, actions taken by the convention at its later sessions, are not known. It is understood, however, that a lengthy discussion took place on the subject of price agreements covering the trade in the west. This feature has been emphasized considerably, and much difference has resulted between the members of th association in recent months over disagreements and price-cutting. In some states on the other side, price agreements are in force covering the large districts, but it would seem that it is impossible to arrange such matters satisfactorily in Canada, especially on a large scale. In Ontario it has been felt that all price agreements should be entirely arranged by the local merchants in any one town or district, the provincial association having nothing to do whatever with the arrangement of minimum prices. If the association succeeds in preventing the jobbers from selling to the consumers without protecting the retail trade, it has more than justified its existence.

Association Funds.

A financial report will be published next week along with a full report of the convention's doings, as supplied by the proposed committee. It is understood, however, that a large percentage of the members have been very slow in forwarding their fees to the secretary, and it has been felt by all who have the interests of the trade at heart that this is a serious mistake, as the trade stands to give much through the existence of the asociation, certainly far more than the membership fee. It would be a serious mistake for the members to allow the work of the association to be handicapped in any way by lack of funds.

MAIL ORDER HOUSE LOSES.

A decision has just been rendered by Judge Carland, of the United States Court, Sioux Falls, S.D., denying the application of Montgomery Word & Co., Chicago, for a temporary injunction restraining the officers and directors of the South Dakota Retail Merchants' Association and the editor of the Commercial News from continuing their alleged boycott against the catalogue house. Because some jobbers and manufacturers refused to sell goods to the catalogue house the company alleged that it had been damaged through being unable to purchase the goods required by it to fill the orders of its customers, and accordingly brought suit against the alleged offending parties, as has been noted in our columns. The importance of the decision is the fact that had the plaintiff won in this case there was a general belief that the intention of the company was to institute similar actions in other states where merchants' associations are waging a warfare against the encroachments of the mail order houses. The association made up a list of the jobbers and manufacturers who would not agree to sell to the retail trade exclusively, and circulated this list amongst about 1,500 retail dealers. The mail order house claimed the list to be a "black list," but the court decision indicates that the retail trade can continue to decide who they shall or shall not buy from as well as allowing them to take joint action in this matter.

WRITE EARLY AND OFTEN.

Everyone knows that the mail order business done by the few large department stores is enormous, and that it has effected great injury to the small merchants throughout the length and breadth of the country. However, it is small compared with what would be done by them, and exclusive mail order houses that would spring up, if the Postmaster-General undertook to facilitate it by putting in force the parcels post c.o.d. legislation still being considered by him.

That the catalogue houses are behind the extension of the parcels post system there is little doubt, and it must not be supposed that they would be satisfied to have the Government make a profit out of the delivery business. Of course, it will be argued that lower rates would do the most good to the greatest number of people, a thin disguise to the real object in view. The mail order people care nothing so long as their own ends are served. What they want is the extension of their operations at the expense of the national treasury and the retail merchants.

Consumers are not asking for this change in the postal system, and they do not need it. The country is better without it. Better far, in the interest of the national life, a thousand independent business men than one business man with a thousand or five thousand employes. The movement, if successful, means the pulling down of small institutions all over the Dominion to build up a few mammoth houses in the big cities. Surely the cities are draining the country too fast already.

All that any local merchant asks is a fair chance, and he would certainly not be getting it under the provisions of this bill. He has it in his power to turn aside the blow which it aims at him. Let him do so by seeing that a stream of letters of protest continues to flow into the office of the Postmaster-General until the word is given that the scheme is as dead as it deserves to be.

Write three or four times if necessary. Postage costs nothing, as the letters O.H.M.S. are as good as a two-cent stamp when the letter is written on matters of Government legislation.

Dealers and Their Stores

Retail Dealers are Requested to Supply Information Regarding Business Changes, Sketches of the Development of Large Retail Businesses, Etc., Accompanied by Photos or Floor Plans and an Outline of the Methods or Systems used in Conducting Their Business.

ARTHUR'S DEPARTMENTAL STORE.

It is doubtful if there are many stores in the smaller towns in Canada more generally and favorably known than that of D. Brocklebank & Son, at Arthur, Ont. We hope soon to be able to publish photos and floor plans of the building, the dimensions of which are 40 x 100 feet with a floor space totaling 125,000 feet.

The store is light and airy with splendid ventilation. The ceilings and partitions are metallic, while the establishment throughout is heated by steam and lighted with electricity (comprising nearly 100 incandescents). Modern lavatories, both up-stairs and down for the use and convenience of customers have been installed. A splendid cash carrier system, converging in different directions to the cash office, is most serviceable to waiting customers. In the rear is an elevator for taking goods up and down stairs, while a separate cement building, 24 x 36 feet, is used for storing oils and heavy iron, and for a tin shop. By a self-measuring tank system oil is carried from the storehouse into the main building. This materially reduces insurance rates. Another storehouse, 24 x 30 feet, is situated further in the rear.

In the basement a salesroom, 30 x 50 feet, is devoted to crockery, lamps, churns, washing machines and woodenware, stocks of glass, nails, rope, etc., occupying the remainder of the cellar. The first floor is handsomely fitted up with plate glass silent salesmen and modern shelving. On the left side a varied stock of general hardware, cutlery, silverware, clocks, and paint, while crockery, tinware and enamelled ware occupies the centre of the floor, these household lines being in charge of a bright saleslady, who has made her department attractive and popular with the women of the town who buy kitchen goods. The right side of the main floor is given over to large stocks of clothing and men's furnishings, while in the rear a complete stock of harness is carried. Upstairs there is a display of stoves and heating goods comprising several of the leading makes, and, in addition, a line of sewing machines and bicycles. Furnaces and hot water boilers are carried in the tin and work shop in the rear. All the buying is done by E. W. Brocklebank, the junior member of the firm, and in keeping with the progressive methods of the company credit is eschewed and the cash system in force.

D. Brocklebank, whose likeness is reproduced, is the head of the firm, he being well known to the trade as one of the executive officers of the Ontario Retail Hardware Association. He was born, 51 years ago, at Malton, Peel county, his experience comprising four years as a school teacher, two years with Beatty Bros., Fergus, and from 1884 to 1892 in the hardware business at Arthur. For a year he published a paper in Arthur, then spending three years in the dry goods business at Simcoe, in 1896 returning to Arthur and buying out H. W. Gillrie's hardware store. In 1905 he built the Brocklebank block and took his son into partnership.

Mr. Brocklebank is also part owner of the Arthur and Wingham flour mills and has given his fellow citizens three years service in the town council and six on the public school board. Business interests have prevented him devoting much time to public life, but those who know him, either as a citizen of Arthur, as a business man, or as an officer of the Retail Hardware Association, realize that he possesses the qualities which would make it possible for him to serve with credit to himself in any capacity his friends placed him.

D. BROCKLEBANK, ARTHUR
Member of the Executive Committee of the Ontario Retail Hardware Association.

MITCHELL STORE ENLARGED.

According to travelers, one of the most attractive stores in Western Ontario is that of F. A. Campbell. The property on the east side, lately purchased from the Burret estate, has been connected with the old store by large openings in the dividing wall and both sides have been thoroughly refitted in the most up-to-date style, the facing of the shelving and drawers being hardwood. The large business done by Mr. Campbell left him cramped for room, but hereafter he will have no reason to complain in this respect, for with a frontage of 40 feet and a depth of 100 feet, with two stores in the rear and a large cellar, he will have all the accommodation required for his growing business. In addition to hardware he will hereafter carry a full line of tin and graniteware, and in fact almost everything tht may be found in city stores.

Mr. Campbell is one of the most prosperous and wide awake hardwaremen to be found anywhere; is deserving of success, for his aim has always been to handle the best, buy for cash and please his patrons.

ENTERPRISING YOUNG MEN.

The Peterborough Hardware Company will in future be under new management, four prominent young business men of about 30 years of age who have been connected with this firm for a number of years, having taken control. The new company will be composed of V. Eastwood, president; Manson Comstock, managing director; Harry Morgan, vice-president; C. W. Blewitt, secretary-treasurer. These young men are all thoroughly acquainted with every detail of the business, having started in as clerks in the store when young boys and by hard and close attention to business combined with natural ability, climbed to their present position.

The Peterborough Hardware Company is one of the best known retail and jobbing businesses in Eastern Ontario, having been established in 1893 by the amalgamation of the McKee & Davidson and Fortye & Phalen firms.

During the recent cold snap at Vancouver a peculiar acident occurred to J. A. Flett & Co.'s new hardware store on Westminster avenue. The store is located in a brick and stone block and the store windows have as a foundation long stones laid in the ground. The frost raised these stones, and with the weight of the upper story pressing from above and the frost driving the stones upward the large plate glass windows buckled and suddenly crashed into a thousand fragments. Manager Owens feared that the front was in danger, and promptly got out carpenters and propped up the entrance. The remaining plate glass has been protected by being loosened so as to be capable of instant removal, and the owners of the building notified. The loss in the glass is fully $150.

Effective Hardware Advertising

We purposely reproduce D. Brocklebank & Son's ad. this week because it contains the elements of strength and weakness in a peculiar degree. The man who wrote this ad. is capable of turning out first-class copy—copy strong and effective enough to fill his store pretty regularly with eager buyers, and there is no reason under the sun why he should not do so. He has grasped the primary fact of all effective advertising, viz.: that reason why copy is the essential thing. The border and the set-up stand in the same relation to a good ad. as the frame and point-of-view to a good picture. A Turner landscape remains a Turner landscape it matters not how dilapidated the canvas and frame may be.

Reasons Why You Should Buy at This Store.

That's good stuff—just the sort of stuff the economic man or woman looks for in an ad. Both say: "Mr. So-and-So advertises all the time; but he doesn't give us any very substantial reasons for dealing at his store."

This sort of buyer—male and female—is a pretty numerous party in every community. "Reasons why" appearing under the head of Brocklebank's store news attracted him. And Mr. Brocklebank can rest assured that his ad., in this particular instance, was read. That's the half of the fight. You would all be content to worry along, particularly if you were convinced that your ads. were read.

* * *

"Because everything is new and up-to-date." That is a pretty attractive reason; but your next reason, Mr. Brocklebank, is in no way illuminating, or fetching. Your prices may be "always right," but when it is possible for a man to state exactly what these "right prices" are in round figures he should always do so. Suppose one of your citizens had wanted a stove about the time your ad. appeared. You have advertised standard stoves. But if a competitor had advertised the same line of stoves—specifying the make and prices in every case—you can rest assured that the fellow on the stove hunt would not have called on you first, and probably—very probably, not at all. Stoves are thoroughly and systematically advertised by the makers. The people know stove values. And they would have appreciated your range and stove talk much more if you had stated the prices.

This fault holds all through the ad. When I want an article I look through the publicity columns of the newspapers and I go to that dealer who frankly states the price. And, mind you, I seldom go to the man who has an article marked down too much. Money does talk. But human nature makes me avoid the low-prices man just as much as I avoid the no-price man.

* * *

Let me state right here that I have touched the point where the big mail order houses get ahead of the country and small city dealers every time. The mail order house sends out an attractive catalogue once or twice a year and backs it up with circulars and other printed matter of a high order. That catalogue describes an article attractively and states the price in almost every case. The buyer knows exactly what he has to pay for the article he wants. You can't afford to produce either a handsome catalogue or an attractive circular, and I am quite sure that the publicity columns of your daily papers will pay you best at any rate—if properly used.

* * *

For instance, Mr. Brocklebank advertises a good line of sewing machines.

Brocklebank's Store News

Reasons Why You Should Buy at This Store!

Why? Because Everything is New and Up to Date
Reason The Prices are Always Right
Hardware Largest Assortment in Town
Stoves and Ranges A Most Complete Selection to Choose from
Ready-Made Clothing Always the Best Quality and the Newest Styles
Crockery Largest Assortment in Town

Ranges Do you need a Range this winter. Better buy one at once, whether you buy from us or not. All Ranges have been advanced 5/- this season from 2 to 3 dollars on a range. We have quite a few in stock somewhere about 20, but they are moving out quickly, one or two a day. These sold up goes the price. You can find an excellent assortment here including, Happy Thought, Empire, Queen, Crown Huron, Walker Pilot, Pandora. Our prices will stand comparison.

Coal Heaters Same thing happened them as the Ranges. Up 5/-. You might as well save a few dollars by buying now, before the other fellow gets the soap. No doubt about finding what you want here, lots of choice. Look em over.
